Fourth International Conference of the journal *Scuola Democratica*

Learning for Democracy / Democracy for Learning

SAPIENZA UNIVERSITY OF ROME, ITALY
SEPTEMBER 1–4, 2026

BOOK OF ABSTRACTS

IN MEMORIAM

This conference is dedicated to the memory of children killed in contemporary wars. It recalls the more than 20,000 children who have died in the Gaza Strip since 7 October 2023 and the 38 children killed in Israel during the terrorist attacks of that same day.

It also remembers children whose lives have been taken or shattered by violence in Iran, Lebanon, Ukraine, Syria, Yemen, Sudan, the Sahel, Somalia, and Myanmar, as well as those who died while attempting to cross the Mediterranean in search of safety from war, drought, and poverty.

According to UNICEF, approximately 473 million children today — one in six worldwide — live in areas affected by armed conflict. For them, there was no democracy, and there will be no education.

TABLE OF CONTENTS

Conference Venues — Campus Map 57

STREAM A · DEMOCRACY, GOVERNANCE AND EDUCATION POLICY 58

SPECIAL EVENT · **A.00. Separated At School: Which Challenges for Policies? (Presentation of SD Special Issue suppl/2025)** 59

Separated At School: Which Challenges for Policies? (Presentation of SD Special Issue suppl/2025) 59
Costanzo Ranci Ortigosa (Politecnico di Milano) · Marta Cordini (Politecnico di Milano) · Gianluca Argentin (Università di Milano-Bicocca)

SPECIAL EVENT · **A.01. A Passion for Education Policy: The Research Journey of Luciano Benadusi** 60

A.02. Alphabets of Peace As Transformative Devices 60

The other's history. Pedagogical reflections about Shoah and Nakba memories 61
Alessandro Vaccarelli (Università degli Studi dell'Aquila, Italy) · Lorenzo Zaffram (Università Sapienza di Roma, Italy)

Third Narrative, Joint Grief, and Shared Future: Symbolic Disarmament in Israel–Palestine 61
Ilaria Olimpico (University La Sapienza, Rome, Italy)

Pacifism and Nonviolence: Limits, Aporias, and Political Control 62
Michele Longo (Università degli Studi di Napoli (Federico II), Italy)

Peace Education and Unaccompanied Children with Migratory Backgrounds in Italy 63
Filippo Iapadre (Università La Sapienza di Roma, Italy)

Reinventing Language as a Tool of Nonviolent Practice in Various Educational Settings 64
Paola Rigoni (Università di Bologna, Italy) · Carmel Berendi (University of Pecs, Hungary)

A.03. The Global Right and Education: Hegemony, Social Justice, and the Post-Liberal Turn 65

Higher Education Priorities Engineered by the Trump-Musk Phase of the Second Trump Administration 65
Iryna Kushnir (Nottigham Trent University, United Kingdom) · Sujith Kumar (King's College London, United Kingdom)

Student Politics In The UK Media: Whose Voices Are Heard, And Whose Are Left Out? 66
Franziska Lessky (University of Oxford, United Kingdom) · Xuedan Yan (University of Oxford, United Kingdom) · Rachel Brooks (University of Oxford, United Kingdom) · Tom Fryer (University of Manchester, United Kingdom) · Rille Raaper (Durham University, United Kingdom)

Undoing Democracy in Education in Ontario, Canada: From Policy to Governance 67
Sue Winton (York University, Canada)

Popular Education Against the New Right: Grassroots Experiences and Democratic Struggles in Post-Authoritarian Chile 68
Diego Cabezas Bravo (Universidad Metropolitana de Ciencias de la Educación, Chile)

The Social and Economic Conditions for Democratic Education 69
Hugh Lauder (University of Bath, UK, United Kingdom)

New Right Narratives on Teachers' Role in Education in Argentina: Symbolic Convergences, Negotiations and Tensions in Secondary Education Policies 69
Juana Sorondo (Universitat Autònoma de Barcelona, Spain) · Silvia Alucin (Instituto de Ciencias de la Educación de Rosario, Argentina; CONICET, Argentina)

Education as a Culture War Arena: The Conservative Assault on Knowledge Institutions in the Trump Era 70
Mattia Diletti (Sapienza University of Rome) · Alice Fischetti (Università della Tuscia, Italy) · Luca Massidda (Università della Tuscia, Italy)

Delegating Educational Justice? Neoliberal Governance and the Transformation of Inequality Policies 71
Cintia Indarramendi (université paris 8, France)

Emotional School Regimes in Neoliberal Times: Conceptions, Practices and Resistances over Student Wellbeing at Madrid's Public Secondary Education 72
Veda Krüger Ruiz (Universitat Autònoma de Barcelona, Spain)

A.05. Education, Democracy and Resistance in Occupied Palestine 73

When School Becomes a Space of Silence: Democratic Costs of Suppressing Palestinian Identity Learning in East Jerusalem 73
Safaa Debs (Hebrew University of Jerusalem (Jerusalem))

Co-designing Inclusion: A Participatory Model for Evaluation and Empowerment in El Salvador, Palestine, and Cameroon 74
Alessandro Soriani (Department of Education Studies, Alma Mater Studiorum - University of Bologna, Italy) · Elena Pacetti (Department of Education Studies, Alma Mater Studiorum - University of Bologna, Italy)

Reframing Education Systems in Settler Colonial Contexts: Lessons from Area C, West Bank 75
Mahmoud Soliman (Coventry University, United Kingdom)

SPOCs for Gaza: Designing Community-Oriented Online Learning as Resistance to Scholasticide 75
Carmelo Presicce (Massachusetts Institute of Technology, United States of America) · Ayat Abodayeh (Massachusetts Institute of Technology, United States of America)

Art and Resistance 76
Mohammed Timraz (University of Parma, Italy) · Emanuela Pettinari (University of Bologna, Italy)

Democracy Under Restrictions: A Phenomenological Study of the Experiences of Teachers and Students in Palestine 77
Nidaa Jibril (Al-Quds University, Palestinian Territories) · Buad Khales (Al-Quds University, Palestinian Territories)

Resistance through Education: Experiences of Palestinian Schools in Jerusalem 77
Nihad Abu Irmeleh (Al Quds University, Israel)

Refusing Erasure: Gazan Women Engaging in Educational Resistance 78
Ayat Abodayeh (Massachusetts Institute of Technology, United States of America) · Carmelo Presicce (Massachusetts Institute of Technology, United States of America)

When Play Becomes an Act of Resistance: Informal Education and Democratic Agency in Aida Camp 79
Dario Ruggieri (Primary school teacher, Italy) · Sofia Torresani (Sapienza, University of Rome)
Digital Bridges for Civic Peace: Virtual Exchange as a Catalyst for Pan-Palestinian Democratic Education 80
Rawan Tahboub (Friedrich Schiller University Jena, Germany)
International Cooperation For Inclusion And Empowerment: A Participatory Research Framework For Inclusive Education In Emergency 81
Ilaria D'Angelo (University of Macerata, Italy) · Arianna Taddei (University of the Republic of San Marino, San Marino) · Tommaso Santilli (University of Macerata, Italy)
Learning Palestine Solidarity: The Jewish National Fund as pedagogical case study 82
Eurig Scandrett (Queen Margaret University, United Kingdom)
Meaningful Learning as a Pathway to Democratic Education: Evidence from English Language Classrooms in the Jerusalem Suburbs 83
Raneen Alkhanafsa (Al.Quds University, Palestinian Territories) · Prof. Buad Khales (Al.Quds University, Palestinian Territories)
From Independent Living to Rethinking Humanitarian Response: Beyond “Leave No One Behind”. Disability, Participation, and Inclusive Humanitarian Action in Gaza 84
Yousef Hamdouna (EducAid, Italy)
The Daily Journey: A Phenomenological Study of Students' Lived Experience Crossing Military Checkpoints as an Everyday Democratic Act and Resistance to Enforced Ignorance 85
Haneen Bostanje (Al-Quds University, Palestinian Territories) · Bu'ad Muhammad Al-Khalis (Al-Quds University, Palestinian Territories)

A.06. Learning to Learn for Democracy, Empowerment and Equity 86

From Study Skills to Learning to Learn: Evidence-Informed Approaches to Inclusion in Lower Secondary Schools 86
Marianna Valente (Università degli Studi Roma Tre) · Marina Chiaro (Università degli studi Link) · Amalia Lavinia Rizzo (Università degli Studi Roma Tre)
Learning to Learn in the School-to-University Transition: Educational Counselling as a Context for Observing and Supporting Strategic Autonomy 87
Sofia Torresani (Sapienza, University of Rome, Italy) · Carlotta Casacci (Alma Mater Studiorum, University of Bologna) · Massimo Marcuccio (Alma Mater Studiorum, University of Bologna)
Teacher Professional Development For The Use Of Evidence-Informed Teaching Strategies: A Quasi-Experimental Study In Primary School 88
Marianna Traversetti (Sapienza, Italy) · Alessio Schiavone (Università degli Studi Roma Tre, Italy) · Amalia Lavinia Rizzo (Università degli Studi Roma Tre, Italy)
Learning To Learn Within Research Infrastructures: Transformative Training For Community Building In FOSSR 89
Serena Fabrizio (CNR-IRCrES – Research Institute on Sustainable Economic Growth, National Research Council of Italy, Rome, Italy) · Rita Giuffredi (CNR-IRCrES – Research Institute on Sustainable Economic Growth, National Research Council of Italy, Rome, Italy) · Erica Rizziato (CNR-IRCrES – Research Institute on Sustainable Economic Growth, National Research Council of Italy, Rome, Italy)
Fostering Learning to Learn in Preschool and Primary Education: An Investigation of Teachers’ Conceptions, Practices, and Professional Needs 90
Annamaria Gentile (Università degli Studi di Modena e Reggio Emilia, Italy) · Lucia Scipione (Università degli Studi di Modena e Reggio Emilia, Italy) · Agnese Vezzani (Università degli Studi di Modena e Reggio Emilia, Italy)
Observing Learning to Learn in Higher Education: Perceived Study Strategy Gaps and Educational Support in Initial Teacher Education 90
Sofia Torresani (Sapienza, University of Rome, Italy) · Marianna Traversetti (Sapienza, University of Rome)

A.08. Nonviolent Education and Demilitarization of Schools: Practices, Tools, and Pedagogical Perspectives Towards Universalist Humanism 92

Reopening History: Capitini’s Intergenerational Antifascism and Nonviolent Pedagogy for Democratic Civic Education 92
Gabriella Falcicchio (University of Bari Aldo Moro, Italy) · Daniele Taurino (University of Bari Aldo Moro, Italy)
Non-Collaboration with War as Pedagogical Praxis: Aldo Capitini’s Nonviolent Framework for Peace and Disarmament 93
Emanuele Follenti (Liceo Scientifico Lorenzo Respighi, Piacenza, Italy)
Archives for Peace: Using Historical Sources to Foster Nonviolence Education in Primary Schools 94
Pamela Giorgi (INDIRE) · Rubina Bazzani (INDIRE) · Alberto Biondo (Centro per lo sviluppo creativo Danilo Dolci) · Tiziana Rita Morgante (Centro per lo sviluppo creativo Danilo Dolci) · Annabella Coiro (Rete ED.UMA.NA.) · Gabriella Fanara (Rete ED.UMA.NA.)
Disarming Education: Transformative Pedagogy, University Public Engagement, and Practices of Active Citizenship 95
Federica Zanetti (University of Bologna, Italy)
Fostering Peace and Nonviolence Through School-Community Partnerships: A Case Study Of Best Practices. 96
Tiziana Landra (Energia per i diritti umani, Italy) · Dino Mancarella (Mondo senza guerre e senza violenza)
Autobiography: A Device at the Service of Peace and Nonviolence 97
Dino Mancarella (Mondo senza guerre, Italy) · Caterina Benelli (Università degli Studi di Firenze)
Peace Education In The Discourse Of Education Policy Of Lithuania 98
Vidmantas Tūtlys (Vytautas Magnus University, Lithuania) · Povilas Dievaitis (S. Ignacius of Loyola College, Lithuania)
Mapping Changes: The Theatre of the Oppressed as a Transformative and Emergent Practice in a Nonviolent Training Pathway. 98
Maria Sangaletti (University of Bergamo, Italy) · Agnese Graticola (University of Bergamo, Italy)
Returning Research Findings in School-based Psychological Research: Participatory and Generative Practices 99
Lucia Irene Porzio (Università degli Studi di Napoli Federico II) · Jacopo Postiglione (Università degli Studi di Napoli Federico II) · Filomena Carillo (Università degli Studi di Napoli Federico II) · Elisabetta Fenizia (Università degli Studi di Napoli Federico II) · Andrea Baroncelli (Università degli Studi di Perugia) · Enrica Ciucci (Università degli Studi di Firenze) · Valentina Grazia (Università degli Studi di Parma) · Ilaria Grazzani (Università degli Studi di Milano Bicocca) · Santa Parrello (Università degli Studi di Napoli Federico II)
From Rigid Identity to Narrative Identity - Nonviolent Education as a Condition for Reconciliation 100
Vito Correddu (Centro Studi Umanista Salvatore Puledda, Italy)
Pedagogy Of Nonviolence Between Theory And Practice: The Significance Of "Energia Per i Diritti Umani" 101
Vittoria Suriano (Energia per i Diritti Umani aps, Italy) · Francesca De Vito (Energia per i Diritti Umani aps, Italy) · Mirko Vecchiarelli (Sapienza University of Rome, Italy)
Nonviolent Teacher Training: A Narrative Review 102
Agnese Graticola (Università degli Studi di Bergamo, Italy)

Nonviolence as a Public and Political Category of Education: Collective Reflections 103
Annabella Coiro (rete EDUMANA, Italy)

A.09. Citizenship, Social Justice and Playful Learning for Economic Awareness and Social Change 104

Enhancing Financial Literacy Through Board Game-Based Learning 104
Duccio Martelli (University of Perugia, Italy)

A Place To Belong: Fostering Computer Science Identity And Social-Emotional Competencies Through Play In Rural Preschools 105
Lori Caudle (The University of Tennessee, Tennessee, United States) · Cathy Grist (Western Carolina University, North Carolina, United States) · Hannah Thompson (Texas A&M University, Texas, United States) · Frances Harper (The University of Tennessee, Tennessee, United States) · Margaret Quinn (Texas A&M University, Texas, United States)

CapitanAVIS: A Randomised Pilot Study on Gamification, Blood Donation Awareness and Pro-Social Attitudes in Primary School Children 106
Cristiana Angelini (University of Florence, Italy) · Ennio Bilancini (IMT School for Advanced Studies Lucca, Italy) · Roberto di Paolo (University of Parma, Italy) · Folco Panizza (IMT School for Advanced Studies Lucca, Italy) · Lina Rinaldi (IMT School for Advanced Studies Lucca, Italy) · Dario Menicagli (University of Florence, Italy)

A Framework For An AI-Supported Design Of Game-Based Learning Units Aimed At Enhancing Prosocial Behaviour And Recognition Of The Others 107
Francesco Claudio Ugolini (Università degli Studi Guglielmo Marconi, Italy) · Flavia Di Donato (Università degli Studi Guglielmo Marconi, Italy) · Domenico Morreale (Università degli Studi Guglielmo Marconi, Italy) · Alessia Travaglini (Università degli Studi Guglielmo Marconi, Italy)

How Play Develops Beauty, Skills, and Belonging 108
Paolo Lucattini (University of Molise, Italy) · Krystina Castella (ArtCenter College of Design Pasadena, California, United States of America) · Ivana Rivero (Universidad Nacional de Río Cuarto (UNRC), Argentina) · Marcelo Ducart (Universidad Nacional de Río Cuarto (UNRC), Argentina)

A.10. Privatization of Education, Segregation and Inequalities 109

Private Education as an Exit Strategy in a Gentrifying City: School Choice and Educational Transitions in Barcelona 109
Sheila Gonzalez Motos (University of Barcelona, Spain) · Xavier Bonal (Autonomous University of Barcelona, Spain)

The Secret Garden of School Segregation in the UK: Private Schools, Social Class and Geography 110
Hakan Forsberg (Uppsala University, Sweden) · Sol Gamsu (Durham University, United Kingdom)

Spatial Inequalities of Educational Opportunity and Political Discontent: Longitudinal Evidence from Urban Chile 111
Maela Guillaume Le-Gall (Nuffield College, Oxford Universtiy, UK) · Quentin Ramond (Centre for Economics and Social Policy, Universidad Mayor, Chile)

Enabling Residential Mix, Reinforcing School Segregation? Private School Choice in Gentrifying Working-Class Neighbourhoods in Paris Metropolitan Area 112
Lise Lecuyer (Sciences Po Paris, France)

The Emergence of a New Private Higher Education Path : the French “bachelors” 113
Tristan Ingrao (Université de Bourgogne Europe, France)

Private Logics in Public Schools: Marketisation and School Segregation in Bologna 114
Irene Giunchi (University of Bologna, Italy)

Are Public and Private Schools Urban Amenities in French Regional Cities? 115
Audrey Chamboredon (Sciences Po Paris, France)

A.11. School Evaluation For Improvement, Equity, Inclusion And Well being 116

Critical Issues and Inclusive Perspectives to Promote the Participation of People with Disabilities and Neurodiversities in Educational Contexts 116
Fabiola Palmiero (Università degli Studi della Campania "Luigi Vanvitelli", Italy) · Davide Di Palma (Università degli Studi della Campania "Luigi Vanvitelli", Italy) · Gianluca Gravino (Università degli Studi della Campania "Luigi Vanvitelli", Italy) · Giovanna Scala (Università degli Studi della Campania "Luigi Vanvitelli", Italy) · Generoso Romano (Università degli Studi di Napoli "Parthenope")

Gamification Inclusive Teaching Methods And Participatory Democracy 118
Giovanna Scala (Università degli studi della Campania Luigi Vanvitelli, Italy) · Davide Di Palma (Università degli studi della Campania Luigi Vanvitelli, Italy) · Gianluca Gravino (Università degli studi della Campania Luigi Vanvitelli, Italy) · Fabiola Palmiero (Università degli studi della Campania Luigi Vanvitelli, Italy) · Giovanni Tafuri (Università degli studi di Napoli Parthenope, Italy)

Systematic Quality Work As A Tool For Improving Equity? A Study On Local Educational Authorities In A Decentralized School System 119

The Role Of Music In The Education Of Children And Young People: Towards The Promotion Of A Conscious Culture And Citizenship 569
Marianna Setti (Associazione Coro Polifonico Castelbarco, Italy)
Musical instrument Study in Adolescence as a Path towards Active Citizenship: The Case of Music High Schools in Italy 569
Federico Bagnasco (Liceo Classico e Musicale Cavour Torino, Italy)
Choral Practice and Participation between Identity and Opportunity: Two Comparative Case Studies from Lombardy and Trentino 570
Marta Villa (University of Trento, Italy)
Broadeining Access To Basic Music Education: The Trentino Experience 571
Silvia Sacchetti (University of Trento, Italy)
The Kingdom of Competence: The Choir as a Mirror of Society Between Vice and Virtue 572
Enrico Correggia (Conservatorio "A. Steffani" di Castelfranco Veneto, Italy)
Understading Each Other's Own Noise: Exchanging Knowledge About Music Between Generations 572
Carlo Centemeri (Independent researcher, classical music editor for Radio Marconi, classical music editor for Radio Popolare) · Francesca Mulas (Independent researcher, author for Rotoclassica-Musica-Le Salon Musical-L'Ape musicale, member of ANCM)

E.09. Spaces of Commons in Education: Learning Democracy through Practices of Togetherness 573

Libraries as a place for Educational Commons 573
Antoine Henry (Lille University, France)
Connecting Local Practices of Educational Commons with Systemic Transformation: The LibCommon case 574
Yannis Pechtelidis (University of Thessaly, Greece) · Stelios Pantazidis (University of Thessaly, Greece)
Bridging Formal and Non-Formal Learning as Educational Commons: The Integration of the Delivery Museum and Scuola Diffusa in Reggio Emilia 575
Laura Landi (Università di Modena e Reggio Emilia, Italy) · Iride Sassi (Officina Educativa, Municipal Educational Services) · Claudia Landini (IC Einstein (Reggio Emilia)) · Chiara Pelliciari (Civic Museums of Reggio Emilia) · Sharon Venturelli (Officina Educativa, Municipal Educational Services) · Irene Lonidetti (IC Einstein (Reggio Emilia)) · Chiara Bertolini (Università di Modena e Reggio Emilia, Italy)
Educational Commons and Youth Activism: Reinterpreting Processes of Change in Rural Schools through a Bourdieusian Lens 576
Mauro Giardiello (University of Roma Tre, Italy) · Rosa Capobianco (University of Roma Tre, Italy)
Schools as Infrastructures for Community Commoning: Participation, shared spaces and community development in Norwegian municipalities 576
Rita Agdal (Western Norway University of Applied Sciences, Norway)
Libraries as Educational Commons for Democratic Culture and Inclusive Learning 577
Arnau Palou (University of Vic, Spain) · Eduard Ramírez (University of Vic, Spain) · Jordi Collet (University of Vic, Spain) · Jasmina Cumeras (University of Vic, Spain)
Learning Together in Public School: Conviviality and the Pedagogy of the Commons 578
Stavroula Stoumpou (University of Thessaly, Greece)
Toddler's Narrative Commons in Aesthetic Literacy Events: Democracy as a Way of Life in Early Childhood Education and Care 579
Robert Lecusay (Stockholm University, Sweden) · Liselott Mariett Olsson (Malmö University, Sweden)

The Educative Community and Educational Commons: a Processual Analysis of Change in a Context of Urban Vulnerability 580
Gianna Cappello (University of Palermo, Italy) · Marianna Siino (LUMSA University, Italy)
Our Carnival!: Children Learning and Living Democracy Through Being Involved in Local Authority Decision Making 581
Emmy Papanastasiou (Democritus University of Thrace, Greece) · Efthymia Penderi (Democritus University of Thrace, Greece) · Katerina Gioftsali (Democritus University of Thrace, Greece) · Ioulia Ntousi (Democritus University of Thrace, Greece) · Sophia Voudilaki (Democritus University of Thrace, Greece)
Learning To Belong? A Qualitative Critical Inquiry Into Spaces Undergoing Urban Regeneration 582
Alessia Polidori (University of Milano-Bicocca, Italy)
Children as Social Actors in Heritage Education Practices: Co-construction of Knowledge in Real-World Labs 583
Ludovica Sebastiano (Free University of Bozen-Bolzano, Italy) · Simone Seitz (Free University of Bozen-Bolzano, Italy) · Francesca Berti (Free University of Bozen-Bolzano, Italy) · Sonia Cabral Matos (Free University of Bozen-Bolzano, Italy) · Ingrid Kofler (Free University of Bozen-Bolzano, Italy)
Spaces and Times of Democratic Education 584
Sergio Leali (LAIF - L'Associazione Istruzione Famigliare, Italy)

E.11. The Child is a Citizen: Democratic Experience, Participation and Rights in the Early Age 585

Democratic Experience and Praxis 585
Dimitris Alexakis (University of Crete, Greece)
Playing Together to Build New Democratic and Inclusive Worlds: the Experience of Officina Koinè 586
Claudia Ciccardi (Università Milano Bicocca, Italy) · Paola Zonca (Università degli Studi di Torino, Italy)
Children's Equality Rights: the Relevance of Educational Guidance from the First Stages of Life 587
Dalila Maria Esposito (University of Florence, Italy)
Beyond Formal Participation: Enacting Agency through Assemblies and Decision-Making in the Co-Design of School Spaces 587
Anna Rita Piazza (Università degli Studi di Firenze, Italy)
Right to Intercultural Childhood: Towards a Socio-Pedagogical Commitment in an Intercultural, Intersectional and Decolonial Perspective 588
Zoran Lapov (University of Florence, Italy)
Pedagogical Professionalism as a Promoter of Inclusion and Rights at School: a Case Study in Tuscany 589
Christian Distefano (University of Florence, Italy)
The Right To Feel: Musical Improvisation As A Practice Of Democratic Participation In Early Childhood 590
Ester Giamberini (University of Florence)
Between Democracy and Autonomy: Educating for the Society of the Future 591
Gabriele Lugaro (CED Centro per l'Educazione al Digitale A.P.S., Italy)
Unschooling For Democracy - Democracy For Unschooling 592
Nunzia Vezzola (LAIF (L'Associazione Istruzione Famigliare), Italy)

E.12. Democratic Participation, Commons and Inclusion in Education 593

Sport As Political-cultural Provocation And Pedagogy For New Criteria For Humanity: The Experiment And Threat Of Enhanced Games 593
Luca Bifulco (Università degli Studi di Napoli Federico II, Italy) · Alberto Maria De Mascellis (Università degli Studi di Udine, Italy)
Citizen Science as a Bridge Between Science Education and Democracy Education 594
Ville Johannes Mäki (University of Jyväskylä, Finland)
Not Technicians of Knowledge but Intellectuals for a Disinterested Education in Sport 595
Castagno Giovanni (Esquilino Fc ASD, Italy)
Youth Policies as Drivers for Urban Regeneration and Social Innovation in the Mediterranean Context: The Case "Galattica" in Puglia, Italy 596
Domenico Emiliano (Università degli Studi di Bari Aldo Moro, Italy)
Paralympic Sport and Inclusive Governance: Practices and Perspectives of Local Actors in Italian Pilot Study 597
Giovanna Russo (University of Bologna - Dept. Education Studies, Italy) · Matteo Bottani (University of Bologna - Dept. Education Studies, Italy)
Youth Social Innovation as a Process of Commoning in the Inner Areas of Basilicata: A Multi-Sited Ethnography 598
Miriam Matteo (University of Salerno (Italy), Italy)

E.13. Democratic Practices, Expansive Learning and the Commons in Education 599

When Open Classrooms Close: Contradictions, Staff Mobility, and Expansive Learning in a Kindergarten Change Laboratory 599
Daniele Morselli (Free University of Bolzano, Italy)
School Principals' Disaster Preparedness Governance: From Bureaucracy to Commoning Practices 600
Magdalini Kolokitha (University of Thessaly, Greece) · Angeliki Lazaridou (University of Thessaly, Greece)
A Change Laboratory Experience with Practitioners Working with Severely Marginalized Populations in Varese 601
Stefano Bonometti (Università dell'Insubria, Italy) · Alessia Tabacchi (Università Cattolica del Sacro Cuore, Italy) · Livia Cadei (Università Cattolica del Sacro Cuore, Italy) · Letizia Ferri (Università dell'Insubria, Italy) · Daniela Germi (Comune di Varese) · Elena Imperiali (Comune di Varese) · Emanuele Serrelli (Università Cattolica del Sacro Cuore, Italy)
Reconceptualizing Social Intervention with Children and Families from Individual and Reactive to Systemic and Participatory. A Change Lab 602
Diego Di Masi (University of Torino, Italy) · Chiara Sità (University of Verona, Italy)
Expansive Learning in Civic Movements: Democractic Activation, Deliberation, and Advocacy to Confront Socio-ecological Crises 603
Mattia Favaretto (Free University of Bozen-Bolzano, Italy)
Cultivating Democratic Education in Schools: Playful Learning and Children's Agency 604
Maria Barbara Donnici (Fondazione Reggio Children, Italy) · Bruna Elena Giacopini (Fondazione Reggio Children, Italy)

STREAM F · INCLUSION, NEURODIVERSITY AND THE POLITICS OF CARE 605

F.01. Ageing with Disability, Life Projects and Democratic Citizenship: Rethinking Special Pedagogy for Older Adults 606

The Excessive Object Of Ageing With Disability: Crisis Of Pedagogical Models Of Development And Reframing Of The Life Project 606
Riccardo Sebastiani (Link Campus University, Italy) · Sara Pellegrini (Link Campus University, Italy)

Virtual Museums as Pedagogical Infrastructures for Inclusion and Democratic Participation in Later Life 607
Alessia Sozio (Unipegaso, Italy) · Rolando Fiore (MIM, Italy) · Tonia De Giuseppe (Università Giustino Fortunato, Benevento, Italy)
Algorithmic Citizenship in Ageing: Artificial Intelligence, Cognitive Delegation and the Democratic Rights of Older Persons with Disabilities 608
Monica Di Domenico (University of Salerno, Italy) · Fabrizio Schiavo (Indire) · Pio Alfredo Di Tore (University of Cassino and Southern Lazio)
“Giving Voice” to Aging: Narrative as a Pedagogical Practice of Democratic Citizenship 609
Giulia Mauti (Università degli Studi di Cassino e del Lazio Meridionale, Italy) · Claudia Spina (Università degli Studi di Cassino e del Lazio Meridionale, Italy)
Progetto di Vita e Relazione di Cura Per L'anziano 610
Daniela Persechini (Università degli Studi di Cassino e del Lazio Meridionale, Italy)
Life Project and Ageing with Disability: Pedagogical Perspectives for Quality of Life 610
Claudia Maulini (Parthenope University, Italy) · Antonio Cuccaro (università Niccolo Cusano) · Enrico Miatto (istituto Universitario Salesiano Venezia)
Life Project in Ageing with Disabilities (AWD): The Role of Animal-Assisted Interventions (AAI) 611
Paola Pela (Università degli Studi di Macerata, Università degli Studi "Gabriele d'Annunzio" Chieti - Pescara, Italy) · Chiara Gentilozzi (Università Pegaso, Italy)
Play for Older Adults with Disabilities, through the Lens of Local Actors and the Scientific Community: An Exploratory Study 612
Laura Menichetti (Università degli Studi di Firenze, Italy) · Dmitry Samoylov (Università degli Studi di Firenze, Italy)
Life Planning in Aging with Disability between Assistance and Caring Relationships 613
Alessandra Lo Piccolo (Università degli Studi di Enna Kore, Italy) · Daniela Pasqualetto (Università degli Studi di Enna Kore, Italy) · Laura Andolina (Università degli Studi di Enna Kore, Italy) · Letizia Pistone (Università degli Studi di Enna Kore, Italy)
Ageing With Disabilities Between Ageism And Ableism: Towards A Special Pedagogy Of Double Vulnerability 614
Giovanna Amendola (University of Cassino and Lazio Meridionale, Italy) · Fortunata Romano (MIM) · Rosa Yessenia Barros (University of Cassino and Lazio Meridionale, Italy) · Pio Alfredo Di Tore (University of Cassino and Lazio Meridionale, Italy)

F.02. Beyond Compensatory Inclusion: Disability, Neurodiversity and Spatialized Inequalities in Education 615

Navigating the normalization apparatus: an Autoethnographic Critique 615
Martina Visentin (University of Padova, Italy)
Indispensable yet Ineducable: Disability, Displacement, and the Spatial Politics of Inclusion in Education in Emergencies 616
Giada Costantini (Boston University, United States of America)
Counteracting the Normalization of Dissident Identities: Pedagogical Reflections Emerging From Neuroqueerness 617
Eleonora Marocchini (Institute for Globally Distributed Open Research and Education) · Chiara Borelli (University of Bologna) · Mariangela Scarpini (University of Parma)
Compensated or Conformed? Spatialized Inequalities in Education 618
Stefania Laguardia (Independent Researcher, Italy)
When They’re All Special Needs: Socially Shaped Educational Need and the Limits of Compensatory Inclusion in Urban Naples 620
Marilena Ricciardi (Università degli studi di Salerno, Italy) · Paola Torrani (Neuro-Gems Neurodiversity Think Tank)
Rethinking Space in Inclusive Assessment: Neurodivergence and the Structural Limits of Supports in Assessment Practices in Higher Education 621
Linda Murphy (University College Cork, Ireland) · Therese Kenna (University College Cork, Ireland) · Blanca Escudero Fontan (University College Cork, Ireland)

F.03. Deaf Inclusion as a Democratic Imperative 622

Deafblind Inclusion: Tactile Communication and Personalized Approaches as Educational Imperative 622
Samantha Marsili (Marsili, Italy)
Access to Healthcare Services and Democratic Inclusion of the Deaf Community 623
Luigi Sifanno (Università degli Studi di Bari "Aldo Moro", Italy) · Maria Elena Quadrato (Università degli Studi di Bari "Aldo Moro", Italy)
A Phenomenological Investigation Into The Perception Of Loneliness In Deaf Adults 624
Sara Alfia Nicotra (Università degli Studi di Messina, Italy) · Patrizia Giuseppina Longo (Università degli Studi di Catania, Italy) · Paola Pennisi (Università degli Studi di Messina, Italy)
Between Inclusion and Representation. Politics, Power and Agency in the Italian Deaf Community 625
Beatrice D'Aversa (LIS School “Gruppo SILIS”) · Alessio Di Renzo (Lab LaCAM, ISTC CNR) · Anna Lo Bello (LIS School “Gruppo SILIS”) · Amir Zuccala (ENS; Sapienza University)
The Inclusion of Deaf People in the Italian School System: Historical, Educational, and Democratic Perspectives 626
Sofia Montecchiani (University of Chieti-Pescara (Italy), Italy)
The Educational and Societal Value of Diversity Based on LSF 626
Jeremie Segouat (Université Toulouse Jean Jaures, France) · Jean-François Piquet (Université Toulouse Jean Jaures, France)
A Democratic School before Democracy: Charles-Michel L'Épée and the Birth of Sign Language 627
Donata Chirico' (UNIVERSITÀ "MAGNA GRAECIA" - Catanzaro, Italy)
Inclusion of Deaf Individuals in Hospital Settings: LIS and Deaf Culture Training as a Democratic Imperative 628
Daniele Polignano (libero professionista, Italy)
Translation to and from Sign Language as a Democratic Process of Inclusion 629
Pietro Celo (Università di Parma, Italy)
Deafhood: Evaluating An Italian Equivalent 629
Cassandra Dagani (Università di Parma, Italy)
Sign Language and Linguistic Democracy at School: the Case of Italian Deaf Students 630
Maria Tagarelli De Monte (Università degli Studi Internazionali di Roma (UNINT), Italy) · Danilo Del Piro (Università della Calabria, Italy)
Inclusive Design in Education from a Deaf Studies Perspective: Insights on Deaf Epistemologies and Learning Practices 631
Federica Baroni (Università degli studi di Bergamo, Italy) · Luca Des Dorides (Università degli studi di Milano-Bicocca, Italy)
Listening With The Body: The Performativity Of Bobò And Christine Sun Kim 632
Vincenza Costantino (Università degli studi "G. d'Annunzio" Chieti-Pescara, Italy)

F.04. In Praise of the Margin. The Representation of "Other Bodies" Between Disabling Devices and Practices of Self-Determination 633

Why Abnormal? Contemporary Relevance Of The French institutionalist Movement Against Asylum Custody 633
Pietro Savastio (Università di Torino, Italy)

Crip Witches: Reclaiming Power And Knowledge From Marginalized Bodymindes 634
Sofia Righetti Nottegar (University of Verona, Italy)

Liberating the Gaze: Bodily Difference in Sport and the Pedagogical Challenge of Inclusion 635
Martina Petrini (Università degli Studi "G. d'Annunzio" Chieti-Pescara, Italy)

Autism and Prejudice. How Cinema Shapes the Collective Imaginary 636
Martina De Castro (Roma Tre University, Italy) · Carmela Albanese (Roma Tre University, Italy)

Ableism, Ur-Fascism, Media-Social Control and Pseudo-Inclusive Practices. First outcomes of an Exploratory Survey 637
Fabio Bocci (Department of Education, Roma Tre University, Italy) · Virginia Benedetti (University of Macerata, Phd Course in TEACHING & LEARNING SCIENCES (curriculum inclusion)Ableism, Ur-Fascism, Media-Social Control and Pseudo-Inclusive Practices. First outcomes of an Exploratory Survey) · Barbara Centrone (Department of Education, Roma Tre University, Italy) · Martina De castro (Department of Education, Roma Tre University, Italy) · Alessandra Straniero (Department of Mathematics and Computer Science, University of Calabria) · Leonardo Tantari (University of Macerata, Phd Course in TEACHING & LEARNING SCIENCES (curriculum inclusion)Ableism, Ur-Fascism, Media-Social Control and Pseudo-Inclusive Practices. First outcomes of an Exploratory Survey)

Bodies out of frame Film and Television Representation of Disability in the Italian School, Between Objectification and Self-determination. 638
Francesca Caprino (INDIRE, Italy)

Representing Disability and Producing Alterity in Cinema: The Academy Awards as a Case Study of Narrative Recognition 639
Andrea Fiorucci (University of Salento, Italy) · Giorgia Cazzato (University of Salento, Italy)

Going Flat as Collective Self-Determination: Counter-Narratives of Post-Mastectomy Bodies 640
Carla Gueli (Università Roma Tre, Italy)

Disabled Bodies in Cinematic Representations: A Critical Cbservatory to Shed Light on Our Own Views 641
Leonardo Tantari (Università Roma Tre)

F.06. Learning Together, Participating Fully: Inclusion and Difference as Educational Resources 642

A Bridge Between Italy And Japan: The OECD "Infinity Project" for Promoting Inclusion And Shared Educational Perspectives Across Cultures 642
Mariagrazia Marcarini (University of Bologna, Italy) · Isabella Bennardi (University of Bologna, Italy)

Retelling Stories, Restarting Lives: Evaluating University Empowerment and Orientation Trainings through Neurodivergent Young Adult Self-Narrative Turning-Points 643
Giulia Aguzzi (Università per Stranieri di Siena, Italy)

Schooling Inclusion: Genesis, Fragilities, and Perspectives of the Italian Model 645
Francesca Caprino (INDIRE, Italy) · Simone Consegnati (INDIRE, Italy)

Beyond The Language Barrier: An Immersive Serious Game Promoting Equity And Participation In Secondary Schools 646
Fabiola Camandona (Università degli Studi di Torino, Italy)

INDIRE-Training Courses for the Specialisation of Support Teachers: Participants' Final Feedback 647
Serena Greco (Istituto Nazionale di Documentazione, Innovazione e Ricerca Educativa-INDIRE, Italy) · Sara Mori (Istituto Nazionale di Documentazione, Innovazione e Ricerca Educativa-INDIRE, Italy) · Francesca Storai (Istituto Nazionale di Documentazione, Innovazione e Ricerca Educativa-INDIRE, Italy) · Elsa Maria Bruni (Università Telematica degli studi IUL)

The Impact of the EbISS Program for Learning to Study in a Lifelong Learning Perspective 648
Claudia Dirodi (Sapienza Universita` di Roma, Italy) · Irene Stanzione (Sapienza Universita` di Roma, Italy) · Marianna Traversetti (Sapienza Universita` di Roma, Italy)

Training Teachers in Shared Reflexivity Through the Authentic Inclusive Task: a Research-based Training Path in a Comprehensive Institute in Rome 649
Alessia Travaglini (Guglielmo Marconi University, Italy) · Flavia Di Donato (Guglielmo Marconi University, Italy) · Francesco Claudio Ugolini (Guglielmo Marconi University, Italy)

Educational Inclusion and Economic Citizenship: Rethinking Life Plans for Students with Disabilities 650
Luca Refrigeri (University of Molise, Italy)

Scuola Dell'Infanzia As An Educational Interstice: Documentary Action Research On The Italian Early Childhood Curriculum 651
Francesca Capone (Università di Torino) · Maria Gagliano (Università di Torino; I.C. Rivalta (TO)) · Serena Allena (I.C. Rivalta (TO)) · Paola Pagin (I.C. Rivalta (TO)) · Barbara Peretti (I.C. Rivalta (TO)) · Maddalena Zafettieri (Università di Torino; I.C. M.L. King Grugliasco (TO))

Socioemotional development within the Universal Design for Learning Classroom 652
Anna Berti (Libera Università di Bolzano, Italy) · Vanessa Macchia (Libera Università di Bolzano, Italy)

Dancing Among Desks; The Role Of The Body And Movement In The Intercultural School 653
Fernando Battista (Link Campus University, Italy)

The Integrated Theatre Workshop Between Inclusion and Wellbeing: A Study in Primary Schools 654
Eleonora Ferracci (Università di Roma Tor Vergata, Italy)

The Heterogeneity of Needs in the School System: an Analysis of the Levels of Inclusion and Participation of Students with Disabilities 654
Alessandra Battisti (Italian Statistics Institute, Italy) · Sara Corradini (Italian Statistics Institute, Italy) · Lucia Martinez (Italian Statistics Institute, Italy) · Claudia Di Priamo (Italian Statistics Institute, Italy)

AACcessibility: Cognitive Accessibility As A Lever For Equity, Participation, And Democratic Schooling Between School And Community 655
Maria Paola Fortuna (I.C. Guicciardini, Italy)

Inclusive Planning In K-12 Educational Settings Through GenAI: A Systematic Review 656
Silver Cappello (Free University of Bolzano-Bozen, Italy) · Anna Frizzarin (IPRASE, Italy) · Heidrun Demo (Free University of Bolzano-Bozen, Italy)

Between Regulatory Reform And Living Practice: The NUPE 2 Project As An Investigation Into Inclusion And Equity In Primary Schools 657
Amalia Lavinia Rizzo (Roma Tre University, Italy) · Donatella Visceglia (Roma Tre University, Italy) · Alessia Tomei (Roma Tre University, Italy) · Ester Caparrós Martín (University of Malaga (Spain)) · Nieves Blanco Garcia (University of Malaga (Spain))

F.07. Neurodiversity, Education, and Social Justice 658

Unveiling Heterogeneity in Cognitive Fatigue: A Methodological Framework for Assessing Individual Differences in Schoolchildren 658
Margarita Bogdanova (Università degli Studi della Campania "Luigi Vanvitelli", Italy) · Davide Di Palma (Università degli Studi della Campania "Luigi Vanvitelli", Italy)

Inclusive Scholarly Ecologies: Reimagining the School within the Autism Spectrum through Best Practices and Systemic Habilitative Innovation' 659
Valentina Perciavalle (Università degli studi di Catania, Italia) · Maria Luisa Boninelli (Università degli studi di Catania, Italia)

From Clinical Intervention to Universal Education: The STARC Protocol for Socio-Emotional Literacy in an Inclusive School 660
Michele Galloni (CuoreMenteLab Social Enterprise, Italy) · Marco Cadavero (CuoreMenteLab Social Enterprise, Italy; University of Bologna, Italy)

Teaching Physics to Neurodivergent Student: Which Methodologies Foster Effective Learning? 661
Emanuele Zito (Università degli Studi di Palermo, Italy) · Claudio Fazio (Università degli Studi di Palermo, Italy)

Cosmic Roots: Neurodiversity as a Resource for Exploring Connections Between Cosmos and Earth 661
Leonardo De Deo (Dept. of Physics and Astronomy, University of Bologna, Via Gobetti 93/2, 40129 Bologna, Italy; INAF - Osservatorio di Astrofisica e Scienza dello Spazio di Bologna, Via Gobetti 93/3, 40129 Bologna, Italy) · Bartolo Giuseppe Dimattia (Dept. of Food and Agricultural Science, Viale Fanin 46, 40127 Bologna, Italy) · Luca Bergonzini (Dept. of Medical and Surgical Sciences, Via Massarenti, 9, 40138 Bologna, Italy) · Lorenzo Bernini (Conservatorio di Musica "B. Maderna – G. Lettimi", Corso Comandini 1, 47521 Cesena, Italy)

Bloom Is Maslow: Learned Epistemic Helplessness, Neurodiversity, and the False Hierarchy Between Wellbeing and Thought 662
David Vagni (Institute for Research and Innovation in Biomedicine - Italian National Research Council (IRIB-CNR), Italy) · Marco Cadavero (University of Bologna, Italy)

Invisible Targets at School: Camouflaging, Cyberbullying and Overlooked Risks for Girls with Mild Autism 663
Letizia Cavalli (Salesian Pontifical University (UPS) - Rome, Italy) · David Vagni (Institute for Research and Innovation in Biomedicine - Italian National Research Council IRIB-CNR)

Neurodiversity as Epistemic Justice: Cognitive Democracy and Decolonial Perspectives for Transforming Education 665
Giorgio Poletti (University of Ferrara, Italy)

Democratic Schools In The Netherlands: The Blossoming Of Neurodiversity 666
Paola Amoruso (Radboud Universiteit, Netherlands, The)

Narrating Neurodiversity. A Phenomenological Inquiry into the Lived Experiences of Pre-service Educators 667
Marco Cadavero (Alma Mater Studiorum - Università di Bologna) · Anna Salerni (Sapienza Università di Roma) · Silvia Zanazzi (Università di Ferrara, Italy) · Valeria Friso (Alma Mater Studiorum - Università di Bologna)

Opaque For Whom? Neuro-Algo-Divergent Perspectives In The Digital Society 668
Giacomo Astorri (University of Bologna, Italy)

Neurosphere: Designing the "Autistic City" through Neurodivergent Culture and Inclusive Urbanism Outline: 668
Eleononora Varriale (Neurosphere, Italy)

Communicative Accessibility And Social Justice: Co-evolution and Neurodiversity in Primary School 669
Isabella Bennardi (Università degli studi di Bologna, Italy) · Patrizia Sandri (Università degli studi di Bologna, Italy)

A "Door" As An Inclusive, Democratic, Transformative Tool. Neurodiversity, Systemic Perspective, Processes Of Inclusion And Coevolution In The Educational Community 670
Mariagrazia Marcarini (University of Bologna, Italy) · Donatella Di Franco (Istituto Comprensivo F.S. Cabrini - Plesso Tommaso Gulli Scuola Secondaria Primo Grado)

Beyond Compensatory Inclusion: Parents' Perspectives on School And Social Participation Among Neurodivergent Children In Italy 671
Simone Consegnati (INDIRE, Italy) · Enrico Palladino (Associazione Italiana Persone Down (AIPD))

Between Inclusion and Neurodiversity: Future Educators' Conceptions in an AI-Mediated Educational Context 672
Silvia Zanazzi (Università degli Studi di Ferrara) · Massimo Marcuccio (Alma Mater Studiorum - Università di Bologna, Italy) · Maria Elena Tassinari (Alma Mater Studiorum - Università di Bologna, Italy)

Beyond the Score: Embodied Music Learning and Neurodivergence as an Epistemic Resource 673
Susanna Zanella Cavallero (Università degli Studi Roma Tre; Universität Münster – Musikhochschule Münster) · Giuseppe Pantano (Università degli Studi Roma Tre; Université de Lorraine - IDEA research Unit) · Amalia Lavinia Rizzo (Università degli Studi Roma Tre)

F.08. Nurturing Inclusivity: Care Practices and the Transformation of Higher Education 674

Care-less Goverance: Hotspot Approach, Educational Exclusion, and the Politics of Care in Euro-Mediterranean Migration Policy 674
Martina Riccardi (Università degli Studi di Bari Aldo Moro, Italy)

'Now You See Me, Now You Don't'? The In/visibility, Mis/recognition and Intersectionality of Carers in UK Academia 675
Marie-Pierre Moreau (Anglia Ruskin University, United Kingdom)

The Care-Free Researcher Myth: A Comparative Study 676
Martina Visentin (University of Padova, Italy)

Unsustainable Passion. Practices of Care in Academia Between Invisibilization and Radical Resistance 677
Cuerpa In Ricerca (Collettivo femminista, Italy)

Practices of Care and Inclusion in Higher Education: the CABES Questionnaire as a Tool for Institutional Listening 678
Daniela Maggi (Department of Human and Social Sciences, e-Campus University, Italy) · Fabio Lucchini (Department of Human and Social Sciences, e-Campus University, Italy) · Aurora De Biasio (Department of Human and Social Sciences, e-Campus University, Italy) · Tania Moretta (Department of Theoretical and Applied Sciences, e-Campus University, Italy) · Venusia Covelli (Department of Theoretical and Applied Sciences, e-Campus University, Italy)

F.09. Teachers' Emotions, Agency and Professional Capacity for Inclusion within the Education–Democracy Nexus 679

Hybrid Community of Practice for sustainable critical pedagogy in ICT-integrated Mathematics Teaching among Pre-Service Teachers 679
Anastasia Gordon (Cape Peninsula University of Technology, South Africa)

Transdisciplinary Perspectives for Research and Intervention on Teachers' Emotional–Relational Competencies: The LAB-CERD (University of Modena and Reggio Emilia, Italy) 680
Paola Damiani (Università degli Studi di Modena e Reggio Emilia, Italy) · Tommaso Firaux (Università degli Studi di Modena e Reggio Emilia, Italy) · Marco Cavaglià (Politecnico di Torino, Italy)

Building Capable Schools: Enhancing Teachers' Professional Capacity for Inclusion through a National Evidence-Based Training Network 681
Ivano De Luca (Istituto Comprensivo Statale Di Taviano "Francesco Dimo", Italy) · Simone Aldo Buonporto (IDCERT Società Benefit srl) · Sandra Calzolaro (Istituto Comprensivo Statale Di Taviano "Francesco Dimo", Italy) · Fabio De Vita (Istituto Comprensivo Statale Di Taviano "Francesco Dimo", Italy) · Susanna D'Amato (Istituto Comprensivo Statale Di Taviano "Francesco Dimo", Italy) · Federica De Blasi (Istituto Comprensivo Statale Di Taviano "Francesco Dimo", Italy) · Emanuela Tenuzzo (Istituto Comprensivo Statale Di Taviano "Francesco Dimo", Italy) · Simona Belloni (Istituto Comprensivo Statale Di Taviano "Francesco Dimo", Italy)

Teacher Self-Efficacy and Affective Dimensions to Support the Professional Development of Inclusive Teachers: An Exploratory Study 682
Lucia Scipione (Università Modena e Reggio Emilia, Italy) · Paola Damiani (Università Modena e Reggio Emilia, Italy)

Building Inclusive Agency through Teacher Collaboration: Classroom and Special Education Teachers in Italian Schools 683
Sara Romiti (INVALSI, Italy) · Letizia Giampietro (INVALSI, Italy) · Monica Perazzolo (INVALSI, Italy) · Graziana Epifani (INVALSI, Italy) · Donatella Poliandri (INVALSI, Italy)

Building Democratic Contexts: Participation, Engagement, and Transformation Through the TNE Method 684
Silvia Rossi (Comune di Perugia) · Edoardo Renzi (University of Perugia, Italy) · Alessandra Valastro (University of Perugia, Italy)

Teachers' Emotions and Professional Agency in Data-Informed School Governance 685
Donatella Poliandri (INVALSI - Italian National Institute for the Evaluation of Education, Italy) · Graziana Epifani (INVALSI - Italian National Institute for the Evaluation of Education, Italy) · Letizia Giampietro (INVALSI - Italian National Institute for the Evaluation of Education, Italy) · Monica Perazzolo (INVALSI - Italian National Institute for the Evaluation of Education, Italy) · Sara Romiti (INVALSI - Italian National Institute for the Evaluation of Education, Italy)

Teacher Agency and Inclusion: Constraints and Strategies in High Complexity Schools 686
Graziana Epifani (Invalsi - Italian National Institute for the Evaluation of Education, Italy) · Letizia Giampietro (Invalsi - Italian National Institute for the Evaluation of Education, Italy) · Monica Perazzolo (Invalsi - Italian National Institute for the Evaluation of Education, Italy) · Sara Romiti (Invalsi - Italian National Institute for the Evaluation of Education, Italy) · Donatella Poliandri (Invalsi - Italian National Institute for the Evaluation of Education, Italy)

Emotional Demands, Professional Agency And The Democratic Sustainability Of Inclusion: Evidence From TALIS 2024 Italian Data 687
Laura Palmerio (INVALSI, Italy) · Carlo Di Chiacchio (INVALSI, Italy) · Sabrina Greco (INVALSI, Italy)

In Tune With Inclusion - Designing In-service Professional Development for Instrumental Music Teachers in Inclusive Contexts: Teachers' Perspectives 688
Desiree Calzavara (Libera Università di Bolzano, Italy)

Rediscover Human Similarities Throught Diversity. The Narrative Approach To Implement Empathy During Teacher Training Programs For Inclusion 689
Giulia Aguzzi (Università per Stranieri di Siena, Italy)

From Multimedia to Multisensory Room: A Preliminary Investigation into New Perspectives for Inclusion and Teachers' Professional Competencies 691
Paolo Lucattini (University of Molise, Italy) · Filippo Bruni (University of Molise, Italy) · Marta De Angelis (University of Molise, Italy)

Leading for Democratic Intelligence: Teacher Agency, Emotion, and Epistemic Stewardship in Inclusive Schools 692
Chris Brown (University of Southampton, United Kingdom) · Ruth Luzmore (University of Southampton, United Kingdom)

Democratic Professionalism, Teacher Agency, Relational Governance, Professional Capital; Social-Emotional Learning 693
Mohammed Elmeski (Faculty of Educational Sciences, University Mohammed V, Morocco)

Teaching and Inclusion: Finding a Balance Between Empathy and Artificial Intelligence 694
Jessica Mazzuca (University of Catanzaro Magna Graecia, Italy)

Reintroducing the Early Women Sociologists: Effects on University Teaching and Pedagogical Practices 694
Chiara Ferrari (Università Cattolica del Sacro Cuore, Italy)

An Empirical Study of Circle Singing as a Methodology to Promote Inclusion and Enhance Teacher Competences in Higher Education 695
Giuseppe Pantano (Roma Tre University, Italy - Université de Lorraine) · Susanna Zanella (Roma Tre University, Italy - Universität Münster – Musikhochschule) · Amalia Rizzo (Roma Tre University, Italy)

Generative Agency, Capability, and Well-Being in inclusive teaching practices 696
Daniela Gulisano (Università degli Studi di Catania, Dipartimento di Scienze della Formazione, Italy) · Paolina Mulè (Università degli Studi di Catania, Dipartimento di Scienze della Formazione, Italy)

F.10. The Realm of Ableist Meritocracy: Unmasking Practices of Pseudo-Inclusion Within the Italian Education System 697

Deconstructing Ableism in Teacher Education: Reflexivity, Habitus, and Representations of Disability 697
Alessandra Maria Straniero (University of Calabria, Italy)

Practicing Democracy and Inclusive Education through Philosophy for Children in Primary School 698
Arianna Vennarucci (Istituto comprensivo Claudio Abbado, Italy)

The Illusion of Inclusion: Deciphering the Ableist and Performative Apparatus within the New Italian National Guidelines 2025 699
Marianna Piccioli (Università degli Studi di Roma "Foro Italico", Italy)

The Role of Ableism in Producing Micro-Exclusion 700
Francesca Marotti (University of Florence, Italy)

The non-neutrality of The Educational Guidance Of Students With Disabilities: An Ethnography Of School Transitions 701

Ceiling in Gifted Education: Toward and Intersectional Framework for Talent Development in Post-migrant Germany 843
Mariella A. Winter (University of Education Karlsruhe, Germany)
Intersectional Belonging: Adult Migrant Students' Experiences in Finland 844
Alessandra Aldrovandi (University of Helsinki, Finland)
Play as Practice: Epistemologies of Embodied Intersectionality for Democratic Belonging 845
Silke Werth (Free University of Bozen-Bolzano, Italy)

G.14. Learning For Democracy: Recognising and Deconstructing Sexist Stereotypes for a More Equal Society 846

Beyond Normalization: The Radical Right's "Fifth Wave" and the Populist Construction of the Gender Threat 846
Antonio Tramontana (University of Messina, Italy) · Milena Meo (University of Messina, Italy)

Between Invisibility and Political Conflict. The Representation of Violence against LGBTQ+ People in the Italian Press 847
Valentina Raffa (University of Messina, Italy) · Antonio Tramontana (University of Messina, Italy) · Fabio Mostaccio (University of Messina, Italy)

Teaching Inequality at the Dawn of History: Gender Stereotypes in Italian Primary School Textbooks 848
Maria Antonietta Augenti (University of Modena and Reggio Emilia, Italy) · Mario Ederoclite (Department of Education Studies, Alma Mater Studiorum University of Bologna)

Digital Gender-Based Violence and News Media Representation: Non-Consensual Dissemination of Intimate Images in Italian Newspapers 849
Stefania Parisi (Sapienza University of Rome, Italy) · Maddalena Carbonari (Sapienza University of Rome, Italy)

Representing Gender-Based Violence at School: Media Narratives, Stereotypes, and Public Discourse 850
Luca Massidda (Università della Tuscia, Italy)

No Country for a Woman's Consent? Using Grey Areas to Explore Italy's Legal Debate on Sexual Violence 850
Elena Morrone (Università degli Studi di Salerno, Italy)

Learning Femininity Online: Female Dating Strategy and the Reproduction of Sexist Stereotypes in Digital Cultures 851
Debora Maria Pizzimenti (University of Calabria, Italy) · Assunta Penna (University of Messina, Italy)

Countering Stereotypes and Educational Segregation in Schools: The Gender Equality Charter Mark 852
Areta Sobieraj (Oxfam Italia, Italy) · Lorenzo Luatti (Oxfam Italia, Italy)

Gender Stereotypes And Social-Emotional Skills In Italian Students: Gender And Territorial Differences In A Democratic Perspective 853
Paolo Barabanti (INVALSI, Italy) · Patrizia Falzetti (INVALSI, Italy)

The Italian LGBTQ+ Anti-Discrimination Centers As Places for Learning Democracy 854
Fabio Mostaccio (Università degli Studi di Messina, Italia) · Marika Manera (Università degli Studi di Messina, Italia)

G.16. Challenging Educational Inequality Through Alternative: Thinking In Comics Visual Narrative and Hip Hop Pedagogical Frameworks 855

Heroes, ethics, and democracy: Superman and My Hero Academia as epistemic lenses for citizenship 855
Cristiana D'Aprile (Università di Foggia, Italy)

Breaking as Intelligent Movement: Embodied Pedagogy and Educational Ecology in Hip Hop Dance 856
Jacopo Ferri (Independent Researcher)

When They Rap Us. Epistemological Insights from Pedagogic Discourses in the Postcolonial Rap Scene in Italy 856
Francesco Fabbro (University of Rome Tor Vergata, Italy)

Drawing the Right to the City Comics and Creative Methods at the Intersection of Teaching and Research on Gender, Sexism and Urban Safety. 857
Giulia Selmi (University of Parma, Italy)

„Chi sono io, con permesso?": The Educational Potential of Graphic Novels for Narratives of Migration, Identity and Citizenship in Teaching Italian as a Foreign Language 858
Stefanie Faustmann (Masarykova Univerzita, Czech Republic (Czechia))

Visualizing the Unthinkable: The Depiction of the Holocaust in Comics 859
Anna Schnepper (Freie Universität Berlin, Germany)

From Comics to Health: a Qualitative Comparative Study between Italy and Chile within Medical Education 860
Veronica Moretti (Università di Bologna, Italy) · Martina Consoloni (Università di Bologna, Italy) · Alessia De Stefano (Università di Bologna, Italy) · Stefano Ratti (Università di Bologna, Italy) · Pamela Jofre (University of Valparaiso, Chile) · Juan Pablo Gigoux (University of Valparaiso, Chile)

G.17. Homeschooling, Democracy, and the Public Sphere: Rethinking Education through Plural Perspectives 861

Homeschooling and Parenting Models: a Challenge to Secondary Socialisation Processes 861
Francesca Lagomarsino (Disfor, Università di Genova, Italy) · Chiara Lanini (Disfor, Università di Genova, Italy)

From Homeschooling to Skolé. What Can We Learn? Inquiring and Wondering Together, to Release Our School 862
Eleonora Zorzi (Università di Padova, Italy) · Emilia Restiglian (Università di Padova, Italy)

Learning Democracy on the Move: Itinerant Education and Mobile Community Life at LiberSchool 863
Ana Maria Spariosu (Liber S Aps, Italy)

Assessment as a Democratic Practice: a Comparison Between School and Homeschooling 864
Emilia Restiglian (University of Padova, Italy)

Beyond Schooling 864
Lucie Wheeler (Anglia Ruskin University)

G.18. Women's Work and Emancipatory Pathways 865

Beyond Eurocentric School Design: Climate, Architecture, and Learning from East Africa 865
Carla Schwaderer (TU Wien, Austria)

Women's Work in Politics: The Contribution of Angela Maria Guidi Cingolani 866
Paola Dal Toso (Università degli studi di Verona, Italy)

Female Teachers in Fascist Italy: Women's Work, Agency and Emancipation in an Authoritarian Context 867
Erica Spagnolo (Università degli Studi di Roma Tor Vergata, Italy)

Care Work or Democratic Practice? Women's Teaching Work in Freire's Thought 868
Matteo Umbro (University of Rome "Tor Vergata", Italy)

Financial Literacy: A Tool of Empowerment to' Reduce tre Risks of Domestic Economic Violence 869
Elisabetta De lorenzo (Università degli studi di Foggia, Italia)

Educating Intimacy and Relational Awareness: An Educational Intervention to Counter Gender-Based Violence in University Settings 869
Martina Bianchi (Università degli Studi Roma Tre, Italy)

Elsa Conci: the Work of a Woman in Politics for the Emancipation of Women 870
Carla Roverselli (University of Rome Tor Vergata, Italy)

Picturebooks and Narrative Self-Reconstruction as Practices of Women's Empowerment in Migrant Contexts 871

Maintenance of GenAI in Superdiverse Adult Education: Teachers' AI Literacy and Postdigital Practices 872
Enrico Vignando (University of Udine; University of Modena-Reggio Emilia)
The Art of Childbirth and the Pedagogy of Redemption: The Hospital of San Rocco delle Partorienti e delle Celate and the Emancipation of Roman Midwives 873
Rita Chiricò (Università degli Studi Niccolò Cusano, Italy)
Challenging Gender-based Violence Against Women With Disabilities: Narrative Practices and Peer Counselling from an Intersectional Perspective 874
Barbara Alesi (Univeristy of Macerata, Italy) · Arianna Taddei (University of San Marino Republic, San Marino Republic)
Bell Hooks and the Legacy of Black Feminism. Feminist Thought and Pedagogical Reflection 875
Emilija Voinovska (Università degli Studi di Roma Tor Vergata, Italy)
Relational Biographies And The Democracy Of Care In Elena Ferrante's My Brilliant Friend 876
Sara Carlesimo (Indipendent researcher, Italy)
Can The Museum Function As A Platform For Social Resonance? 877
Bianca Basile (Università degli Studi di Milano Bicocca, Italy)
Learning from Lady Ada Lovelace: bridging early computing and Artificial Intelligence 877
Rita Franceschetti (Università degli Studi di Roma Tor Vergata, Italy)

G.19. Uncertain Futures, Structured Inequalities: Habitus, Time and Transformation in Education 878

Hysteresis, Symbolic Violence and a Habitus of Resistance: A Bourdieusian Analysis of School Governance in England. 878
Dr Jan Hetherington (University of Derby, United Kingdom)
Forced Habitus Transformation: Fast Track to Employment for Newly Arrived Academics in Sweden 880
Ida Lidegran (Uppsala University, Sweden)
Dropout and Throughput in Teacher Education: Students' Educational Strategies 880
Emma Laurin (Stockholm University, Sweden)
Geographic Capital, Territorial Stigma and Educational Inequalities: A Bourdieusian Perspective on Southern Italian Migrations 881
Martina Brighenti (University of Palermo, Italy)
Investing in School Health Services: Illusio and Market Commitment in the Neoliberal Welfare State 882
Joakim Lindgren (Umea university, Sweden) · Emma Laurin (Stockholm university, Sweden) · Linda Rönnberg (Umea university, Sweden) · Malin Benerdal (Umea university, Sweden)
The Performative Logic of School Experience: When the Future Fades And Judgment Takes Over 883
Rita Fornari (Unimarconi, Italy)
De-classifying Higher Education: Temporal Fields, Shared Barriers and Imagined Futures 884
Ryan G Wilkinson (University of Leeds) · Lucy Hemingway (University of Leeds) · Eleanor Dutton (University of Leeds)

G.20. Unschooling, Democracy and Caring Citizenship 885

Citizenship at the Margin of Schooling: An Autoethnography of Unschooling, Assessment, and Democratic Recognition 885
Elena Piffero (L'Associazione Istruzione In Famiglia Italia, Italy)
Parents' Vs. State's Duties and Rights in Unschooling 886
Nunzia Vezzola (LAIF (L'Associazione Istruzione Famigliare), Italy)
Re-educating the Adult: Unschooling as a Parent-Child Co-Transformative Practice of Democratic Citizenship and Mutual Care Work 887
Laura Bianconi (Associazione LAIF, Italy)
The Dialectic Between the Public and the Private Sphere as a Constitutive Moment of The Learning Process in Unschooling 887
Sergio Leali (LAIF - L'Associazione Istruzione Famigliare, Italy)
Unschooling in France Following the 2021 Reform: Practices, Motivations and Consequences of the Transition to the Authorisation System 888
Elena Fanti (Université Paris Nanterre, Italy)

STREAM H · LIFE COURSES, YOUTH, MIGRATION AND WORK 889

SPECIAL EVENT · **H.00. Framing School-to-Work Programs: Evaluation, Voice and Social Justice** 890

PCTO Between Policy Frames and Local Constraints: Host Organisations, Coordination Gaps, and Stratified Opportunities 890
Alessandra Decataldo (Università degli Studi di Milano-Bicocca) · Federico Paleardi (Università degli Studi di Milano-Bicocca)
Can Active Citizenship Increase Employability? 891
Federica De Luca (INAPP, Italy)
Can the Changing Regulatory Context Strengthen the Relationship Between School and the World of Work? 892
Graziella Arazzi (Ufficio Scolastico Regionale per la Liguria, Italy)
Feeling Informed? Students' Perspectives on Guidance and Choice in School-to-Work Programs in Italy 893
Donatella Poliandri (INVALSI - Italian National Institute for the Evaluation of Education, Italy) · Graziana Epifani (INVALSI - Italian National Institute for the Evaluation of Education, Italy)
Problematizing School-to-Work Programs through Student Voice 894
Valentina Pagani (University of Milano-Bicocca, Italy) · Irene Stanzione (Sapienza Università di Roma) · Elisa Truffelli (Alma Mater Studiorum - Università di Bologna) · Guido Benvenuto (Sapienza Università di Roma)

H.01. Adult Education and Lifelong Learning: Toward a Culture of Inclusion 895

When personal is political? Migrant biographies through Podcasting 895
Sara Gemma (Università degli Studi di Macerata, Università degli Sudi di Napoli "Parthenope", Italy) · Maria Luisa Iavarone (Università degli Sudi di Napoli "Parthenope", Italy) · Francesco Girardi (LESS Società Cooperativa Sociale)
The Role of Innovation Studies in the Knowledge Society: Shared Responsibility, Inclusive Citizenship, and Community Empowerment 896
Fiammetta Fanizza (University of Foggia, Italy) · Fiorella Spallone (University of Foggia, Italy) · Riccardo Scuccimarra (University of Foggia, Italy) · Francesco Ciarnelli (University of Foggia, Italy)

Valuing Non-Linear Professional Identities in Lifelong Learning Systems: Skills Recognition, Continuing Training, and Dual Learning under Italian Decree No. 115/2024 897
Bastianelli Michela (INAPP, Italy)
Adult Education and Lifelong Learning Towards Inclusive Cultures: Freedom, Responsibility, and Generative Pedagogy 898
Giorgia Altobelli (INDIRE, Italy)
Biographical Friction: Personality, Migration and Work in Adult Learning Trajectories 899
Matteo Borri (INDIRE, Italy)
Rethinking Inclusion in AIED (Artificial Intelligence in Education): Explicability and Literacy in the Onlife Era 900
Giulia Lombardo (Istituto nazionale di documentazione innovazione e ricerca educativa (INDIRE), Italy)
Active Aging in Local Communities and Participation 901

Inclusive Workplace Learning: Gender- and Age-Sensitive Returns of Training in Italian Firms 914
Roberto Angotti (INAPP, Italy) · Luisa Errichiello (CNR–ISMed, Italy) · Greta Falavigna (CNR–IRCrES, Italy) · Roberto Ippoliti (Università del Piemonte Orientale, Italy)
Reconceptualising the relationship between Adult Learning and Education (ALE) and Global Citizenship Education (GCE) 915
Marcella Milana (University of Verona, Italy) · Massimiliano Tarozzi (University of Bologna, Italy)
The Generative Value of Work-Based Learning in Tertiary VET: Promoting Capabilities, Inclusion, and Active Citizenship 916
Valerio Massimo Marcone (Università degli studi di Roma Tre, Italy)

H.03. Assembled Youths: Complex Biographies and Educational Trajectories For Uncertain Futures 917

Re-Framing ‘Successful’ Educational Trajectories And Subjectivities – The Role Of Structural, Discursive, And Contextual Factors In Shaping Educational Achievements 917
Jozef Zelinka (University of Münster, Germany) · Sebastiano Benasso (University of Genoa, Italy) · Valeria Pandolfini (University of Genoa, Italy)
Making Futures in Industrial Territories: Youth Transitions between Opportunity and Social Reproduction 918
Juan de Dios Oyarzún (Pontificia Universidad Católica de Valparaíso, Chile)
School Withdrawal Trajectories: Experiences of Alienation and Resonance among Youth 919
Emma Laurin (Stockholm University, Sweden)
Incomplete Puzzles And Shallow Pedagogies: Youth Transitions In Peru’s Informal Urban Settlements 920
Maria Balarin (Grupo de Análisis para el Desarrollo - GRADE, Peru)
Unequal Trajectories, Unequal Futures: Youth Aspirations and Upper Secondary Transitions in Rural Catalonia 921
Mariona Farré (Autonomous University of Barcelona, Spain)
Transnational Assembled Youths: Complex Biographies and Educational Trajectories between China and Italy 922
Fabiana Marchioro (University of Milano-Bicocca, Italy) · Chiara Bove (University of Milano-Bicocca, Italy)
Rural Lives, Urban Universities: Assembled Educational Trajectories of Rural-Origin Youth in a Chilean Border City 923
Andrea Alvarado-Urbina (Universidad de Tarapaca, Chile)
Navigating Inequality: First-Generation Students' Choice, Access and Belonging in Chilean and Ecuadorian Universities 924
Relmu Antonio Gedda Muñoz (Universitat Autònoma de Barcelona, Spain) · María Francisca Bustamante Sage (Universitat Autònoma de Barcelona, Spain)
After Upper Secondary School: An Analysis of Students’ Aspirations in Lombardy 925
Giuliana Parente (Università degli studi di Milano, Italy) · Rossella Bozzon (University of Bologna, Italy)

The Tyranny of Flexibility: Compulsion to Identity and Biographical Performance in Italian Schools 927
Aurora M. Lai (Università di Pisa, Italy)
Uncertain Times, Uncertain Places: Exploring Policies And Place In Post 16 Transitioning 928
Meg Maguire (King's College London, United Kingdom) · Sharon Gewirtz (King's College London, United Kingdom) · Chris Winch (King's College London, United Kingdom) · Sait Bayrakdar (King's College London, United Kingdom) · Amna Sarwer (King's College London, United Kingdom) · Charlotte McPherson (King's College London, United Kingdom)
Affective, Spatial and Temporal Dimensions of Inequality in Youth and Their Internalisation 929
Maria Keil (Justus-Liebig-University Giessen, Germany)

H.04. Becoming Anticipatory Citizens: Adult Learning for Deep Democracy in Complex, Embodied and Pluriversal Societies 930

Towards a Museum of Futures in Italy: Seeds of Futures Literacy Sprouting at The Human Safety Net 930
Mario Cusmai (CIAPE, Italy)
Educating For The Future: Anticipatory Needs Analysis As A Democratic Practice 931
Roberta Terzi (Fondazione Italiana Studi di Futuro_ETS, Italy)
Museums in Venice as Anticipatory Learning Spaces for Autism Inclusion 932
Vania Vanzella (Indipendent Researcher in Social Foresight, Italy)
Democrazy Buzzwords or Democratic Futures? FINNA and the Epistemology of Anticipatory Citizenship 932
Maria Fabiani (Independent researcher and evaluator, Italy)
The Museum as a Meaning-Making Device: Adult Learning and Anticipatory Citizenship in Complex and Global Societies 933
Patrizio Pastore (Sapienza, Italia) · Ida Cortoni (Sapienza, Italia)
Learning Cities, Anticipatory Governance and Deep Democracy 934
Valerio De Nardo (Città metropolitana di Roma Capitale, Italy) · Elisabetta Venanzi (Città metropolitana di Roma Capitale, Italy)
Participatory Conservation as a Deep Living Democracy Experience: Appling Strategic Foresight to the Conservation of Dissonant Heritage 935
Alessia Strozzi (University Politecnica delle Marche, Italy)

H.06. Continuing Training for Self-Employed Workers: Lifelong Learning and Inclusive Democracy 936

Continuing Training, Self-Employment, and Inclusive Democracy in Italy: Ecosystem Integration and Policy Innovation 936
Alessandra Pedone (INAPP, Italy)
Bridging Skills and Jobs: How ITS Academies Align Tertiary Education with Local Labour Demand 937
Silvia Duranti (IRPET, Italy) · Natalia Faraoni (IRPET, Italy)
Lifelong Learning and Self-Employment for the Twin and Just Transition 938
Massimiliano Mazzanti (University of Ferrara, Italy) · Laura Evangelista (Istituto Nazionale per l'Analisi delle Politiche Pubbliche (INAPP), Italy) · Concetta Fonzo (Istituto Nazionale per l'Analisi delle Politiche Pubbliche (INAPP), Italy) · Emy Zecca (University of Ferrara, Italy) · Nicolo Barbieri (University of Ferrara, Italy)
Promoting Social Inclusion of Migrants and Refugees and High-quality Care of Older Adults through an Original Eldercare Training implemented in Four European Countries 939
Sara Santini (IRCSS-INRCA, Italy) · Matteo Finco (IRCSS-INRCA, Italy; Sapienza, Italy)
Reconciling Inclusion and Regeneration of Inland Areas. The Case of the Seproter Project 940
Carmelo Bruni (Sapienza Università di Roma, Italy) · Matteo Finco (Sapienza Università di Roma, Italy)
The Future of Self-Employment: A Middle-Term Analysis (2021–2025). Continuing Training, Hybridisation and Social Protection between Qualified Autonomy and Structural Vulnerability 941
Domenico Barricelli (Inapp, Italy)
Self-Employment, Learning Ecosystems, and Educational Inequalities: Analysis and Evidence From the 2025 INDACO-Adults Survey 942
Roberto Angotti (INAPP, Italy) · Domenico Barricelli (INAPP, Italy) · Simona Carolla (INAPP, Italy)
Democratic Governance And Workforce Learning In the Twin Transition: A Configurational Analysis Of Italian Manufacturing Cooperatives 943
Massimiliano Mazzanti (University of Ferrara, Italy) · Concetta Fonzo (Istituto Nazionale per l'Analisi delle Politiche Pubbliche (INAPP), Italy) · Evangelista Laura (Istituto Nazionale per l'Analisi delle Politiche Pubbliche (INAPP), Italy) · Asia Guerreschi (University of Ferrara, Italy) · Ginevra Coletti (University of Ferrara, Italy)

H.07. Creative and Emancipatory Research with Migrants and Refugees: Rethinking Methods, Education, and Democratic Participation 945

Feminist Photovoice As An Epistemic Device Of Care And Redistribution Of Interpretive Power 945
Annachiara Del Prete (Universidad de La Laguna, Spain)
'We Are Here': How Migrants Defy the Logic of Invisibility and Become Agents of Change 946
Barbara Samaluk (University of Ljubljana, Faculty of Arts, Slovenia)
The Evolution Of School Justice Analyses Of Pupils From The First Generation Of Immigration In Marseille 947
Céline Persini (University of Geneva, Switzerland)
Dual Voices on Skills and Migration: Stakeholders and Migrants in Conversation 948
Francesco Vittori (University of Verona, Italy) · Hande Eslen-Ziya (University of Stavanger, Norway)
Participatory Action Research in a Multicultural After-School Centre: the case of the DREAM project 949
Erica Colussi (Fondazione ISMU ETS, Italy) · Mariagrazia Santagati (Università Cattolica del Sacro Cuore, Italia) · Alessandra Barzaghi (Università Cattolica del Sacro Cuore, Italia) · Chiara Ferrari (Università Cattolica del Sacro Cuore, Italia) · Francesca Sommaruga (Fondazione ISMU ETS, Italy)
The City of Diasporic Memories: from Participatory Research to Educational Practices with Biographical Creative Methods 950
Gianluca Gatta (University of Milan, Italy) · Monica Massari (University of Milan, Italy)

H.09. Evaluating The Quality Of Vocational Training Between Equity and Participation 951

The Territorial Dimension of Vet: Multilevel Governance and Spatial Disparities in Four European Countries 951
Ruggero Cefalo (University of Firenze, Italy) · Yuri Kazepov (University of Vienna, Austria) · Eduardo Barberis (University of Urbino, Italy) · Tero Jarvinen (University of Turku) · Siyka Kovacheva (University of Plovdiv) · Plamen Nanov (University of Plovdiv)

Between Equity And Participation: A Research On International Vocational Training Contexts For Young People With Fragile X Syndrome 952
Alessia Tomei (Università Roma Tre, Italy) · Ines Guerini (Università Roma Tre, Italy) · Fabio Bocci (Università Roma Tre, Italy) · Amalia Rizzo (Università Roma Tre, Italy)
Integrating The Capability Approach Into Quality Evaluation Paradigms: From Self And Teacher Evaluation To Quality Signals In The Italian IeFP 953
Astrid Favella (Sapienza University of Rome, Italy) · Laura Evangelista (INAPP) · Concetta Fonzo (INAPP) · Emiliane Rubat du Mérac (Sapienza University of Rome, Italy)
Quality, Equity, and Participation in Adult Education and Training 954
Sandra D'Agostino (Inapp, Italy) · Silvia Vaccaro (Inapp, Italy)
From Qualitative Evidence to Digital Narrative Tools for Equitable Youth Transitions across Education, VET, and Work 955
Francesco Pisanu (Provincia Autonoma di Trento, Italy) · Franco Fraccaroli (Università di Trento, Italy) · Giuseppe Rizza (Provincia Autonoma di Trento, Italy)
Factors of Access to Vocational Education and Training to Vulnerable and Involuntary Migrants: Migrants' Perspective 956
Vidmantas Tūtlys (Vytautas Magnus University, Lithuania) · Sigitas Daukilas (Vytautas Magnus University, Lithuania) · Francesco Vittori (University of Verona, Italy) · Angelica Projetti (CNOS-FAP, Italy) · Sergii Melnyk (State Scientific Institution “Institute of Educational Analytics”, Kyiv, Ukraine)
Operationalising Quality Areas: A Competence Mapping Model For Peers In VET 957
Concetta Fonzo (Istituto Nazionale per l’Analisi delle Politiche Pubbliche (INAPP), Italy) · Laura Evangelista (Istituto Nazionale per l’Analisi delle Politiche Pubbliche (INAPP), Italy) · Eloisa Cianci (Università Cattolica del Sacro Cuore, Italy)

H.11. Indicators of Youth Condition Within and Beyond Education: Integrating Quantitative and Qualitative Evidence 958

Gendered Stratification of Risk: Long-Term NEET Trajectories in Contemporary Italy 958
Marialuisa Villani (University of Bologna, Italy) · Luisa De Vita (Sapienza University of Rome)
The Knowledge of Experience, the Experience of Knowledge: Time, Space and Subjectivation in the Contemporary University 959
Lorenzo Alvisi (Sapienza Università di Roma, Italy) · Letteria G. Fassari (Sapienza Università di Roma, Italy)
Building Indicators of Youth Political Activation: Design and Initial Validation of the Rizomi Questionnaire 960
Leonardo Parodi (RIZOMI, Italy) · Francesco Pellettieri (RIZOMI, Italy)
To Be Neet Or Not To Be Neet ... Little Women Living In Disadvantaged Metropolitan Contexts Tell Us Another Story 961
Gabriella Natoli (INAPP, Italy) · Sandra Burchi (Independent Researcher, Consultant for Save the Children Italy) · Silvia Taviani (Save the Children)
Active Citizenship and Employability: Developing Composite Indicators from the Italian Universal Civic Service 962
Federica De Luca (INAPP, Italy)

H.12. Intercultural Knowledges and Practices for Democratic Education 963

Intercultural Urban Welfare and Active Citizenship in a Grassroots Italian Language School 963
Francesca Audino (Università degli Studi di Roma "Sapienza", Italy)
Non-formal Education and Participatory Practices: Inclusive Spaces for Intercultural and Democratic Co-construction. 964
Gaetana Tiziana Iannone (Università degli Studi di Roma Tre, Italy)
Public Universities as Spaces of Resistance: A Study of an Intercultural Initial Indigenous Teacher Education Program in Northeastern Brazil 965
Jessica Aguiar (Università Degli Studi di Roma Tre, Italy)
Mediations and Epistemic Agency in Higher Education at the Amazonian Triple Border 966
Gabriela Bravo Vargas (Università degli Studi di Padova, Italy) · Alessio Surian (Università degli Studi di Padova, Italy)
Performing Identity and Agency through Participatory Theatre: The Rampa Prenestina Experience with Roma Youth 967
Aurora Bulgarelli (Link Campus University, Italy)
Urban Aesthetics and Interculturalism: Banksy's contribution to contemporary debate 968
Alessandra Casalbore (Università Roma3, Italy)
The Decolonization of Knowledge in Education: A Cornerstone for a Pluricultural and Democratic Society 969
César Carrillo-Trueba (Facultad de Ciencias, Universidad Nacional Autónoma de México, Mexico)
The Educational Pathways of Youth with a Migrant Background in Italy: a Scoping Review 970
Charaf El Bouhali (Università degli Studi di Padova, Italy)
Intercultural Education and Adoptive Families. Navigating Between Origins and New Identities 971
Stefania Lorenzini (Università di Bologna, Italy)
Intercultural Education: Cohen-Emerique's Cultural Shock Method for Teacher Training 973
Chiara Cocchi (Università degli Studi di Genova, Italy) · Francesca Lagomarsino (Università degli Studi di Genova, Italy) · Nadia Rania (Università degli Studi di Genova, Italy)

H.13. Is There a Role for Arts-based Education in Tackling Educational Poverty and Social Exclusion? 974

Art Therapy For Supporting Ethnic Identity With Roma Minors. Discussion Of A Case In The City Of Milan, Italy 974
Ida Castiglioni (University of Milano Bicocca, Italy) · Silvia Mornati (Brera Academy of Fine Arts, Milano, Italy)
The Předlice Suburb Through the Eyes of Children. The Role of Art Education in a Low-threshold Club in the Socially Excluded Locality in the Czech Republic 975
Vendula Fremlová (Charles University Prague, Czech Republic (Czechia))
Imagining Possible Futures After the Flood: Participatory Artistic Practices for Climate Justice and Social Inclusion 976
Valentina Cappi (University of Bologna, Italy) · Lorenza Villani (University of Bologna, Italy) · Melissa Moralli (University of Bologna, Italy) · Pierluigi Musarò (University of Bologna, Italy)
Art-based Education as a Model of Social Inclusion in Latvia 976
Anita Stasulane (Daugavpils University, Latvia) · Alina Romanovska (Daugavpils University, Latvia)
"Lo Spettacolo Siamo Noi": Evaluating the Effects of a Philosophy and Theatre Program in Middle Schools 977
Lisa Zaquini (ASVAPP, Italy) · Francesca Anglois (ASVAPP, Italy) · Giacomo Ferrato (ASVAPP, Italy) · Jessica Balbo (ASVAPP, Italy)
Participatory Art as an Educational Tool for Co-constructing Knowledge with Adolescents: the Experience of the Sottobanco Project 978
Sara Luraschi (Università degli studi Milano Bicocca, Italy)
New Ways Of Learning Inclusion: Dance-based Methodologies To Foster Reflective Ways To Think About Diversity 979
Chiara Paolino (Università Cattolica del Sacro Cuore, Italy) · Daniela Aliberti (Università Cattolica del Sacro Cuore, Italy) · Greta Brizio (Università Cattolica del Sacro Cuore, Italy)

H.14. Lifelong Guidance Against Social Inequalities: Toward Integrated Policies 980

Narrating Life Paths for Social Inclusion: The DiMMi Project as a Guidance Strategy in Adult Education Centres 980
Marianna Capo (Università degli Studi Mediterranea di Reggio Calabria, Italy)

Lifelong Guidance Against Inequalities: Why Italy's Non-system Fails and What Refugee Pathways Reveal 981
Diego Boerchi (Università Cattolica del Sacro Cuore, Italy)

Guidance as a Relational and Transformative Practice: The Experience of Choice Guidance Desks 982
Nicolò Bongiorno (Send ETS, Italy) · Loriana Cavaleri (Send ETS, Italy)

Lifelong Guidance as Territorial Governance: The Community Educational Pact of Trapani as Infrastructure for Reducing Educational and Social Inequalities 983
Aurelia Bonura (Università degli studi di Palermo, Italy)

Regional Policy Style in Career Guidance: Bach versus Coltrane (or Venetian Structure versus Lombard Experimentation) 984
Ester Bonomi (Università degli Studi di Milano La Statale, Italy)

Semantic Inequality in Lifelong Guidance: Toward a Fourth Policy Level 985
Annunziata Di Lecce (ASNOR Associazione Nazionale Orientatori, Italy) · Annie Pontrandolfo (ASNOR Associazione Nazionale Orientatori, Italy)

H.15. Migrant-background Youth in Education: the Role of Policy and Practice in (Re)producing and Challenging Inequalities 986

Migrant-Background Gaps in Mathematics Before Upper Secondary Tracking: Evidence from TIMSS 2023 986
Giada Viotti (Roma Tre University, Italy; INVALSI) · Giulio Lucentini (Università degli studi di Macerata; Sapienza Università di Roma)

The Segregation of Multilingual Classroom Assistance in Special Education 987
Denis Tajic (Stockholm university, Sweden) · Carlos Rojas (Stockholm university, Sweden)

Global Parents Rearing Global Children. The Role of Children's Education in Family Migration Decision-making. 988
Marta Cristina Azaola (University of Southampton, United Kingdom) · Jay de los Reyes (University of Southampton, United Kingdom) · Chun Hong Yan (University of Southampton, United Kingdom)

From the "Segregated School" to the "International School": Counter-narratives to Challenge Stigma and Inform Policies 989
Sara Giannoni (Università di Torino, Italy) · Valentina Moiso (Università di Torino, Italy)

Systematic Barriers to Unaccompanied Minors' Educational Rights: A Bottom-Up Case Study from Friuli Venezia Giulia (Italy) 990
Andrea Mattia Marcelli (Department of Human and Social Sciences, Universitas Mercatorum (Italy); Borderland Education Network, Gorizia (Italy)) · Vincenzo Salerno (Department of Education, IUSVE - Istituto Universitario Salesiano Venezia (Holy See); Borderland Education Network, Gorizia (Italy)) · Giosuè Casasola (Borderland Education Network, Gorizia (Italy)) · Marco Culot (Borderland Education Network, Gorizia (Italy)) · Irene de Savorgnani (Borderland Education Network, Gorizia (Italy)) · Fabio Milocco (Borderland Education Network, Gorizia (Italy)) · Gabriele Poz (Borderland Education Network, Gorizia (Italy)) · Ornella Vidoni (Borderland Education Network, Gorizia (Italy)) · Irene Dal Ben (Borderland Education Network, Gorizia (Italy); PhD Programme in Social Work and Personal Social Services, Università Cattolica del Sacro Cuore (Italy))

The Development of Computer Adaptive Learning and Assessment: Toward Increasing Student Success and Intercultural and Social Tolerance 991
Rina Manuela Contini (University eCampus, Italy) · Michael Nettles (Morgan State University, MD, U.S.A.) · Marianna Boero (University of Teramo, Italy)

Constructing Heritage Language Education through Policy: A Comparative Macro-Level Analysis across South Tyrol and the cantons of Bern and Lucerne 991

The Asylum And Migration Fund In Italian Education, Training And Guidance Policies For Migrant Background Youth: Legislation, Programming, Governance, Socio Educational Impacts 1007
Emma Robbio (INAPP, Italy)
Learning Across Borders: Recognizing the Intellectual Capital of Children Moving Alone in Italy 1008
Alessandra Barzaghi (Università Cattolica del Sacro Cuore di Milano, Italy)
Inclusion of young Roma, Sinti and Camminanti: intellectual capital and intercultural strategies 1009
Sabina Polidori (INAPP, Italy) · Ksenija Fonovic (LabTS - Laboratorio Terzo Settore)

H.19. University Students with Migrant Backgrounds: Rethinking Educational Justice and Democratic Inclusion 1010

Aspirations and University Attendance Among Immigrant Students in Italy: A Longitudinal Perspective 1010
Alessio Buonomo (Università degli studi di Napoli Federico II) · Cinzia Conti (Istat) · Giuseppe Gabrielli (Università degli studi di Napoli Federico II) · Fabio Massimo Rottino (Istat) · Salvatore Strozza (Università degli studi di Napoli Federico II)
Imagining Otherwise: Intercultural Belongingness and Future Expectations of Children of Migration in Italian Tertiary Education 1011
Simona Miceli (University of Milan, Italy) · Sonia Floriani (University of Calabria, Italy)
Understanding Students with Migrant Backgrounds: Educational Pathways, Institutional Barriers, and Governance Proposals for a More Inclusive University 1012
Zenia Simonella (University of Milano-Bicocca) · Maria Giulia Montanari (University of Milano-Bicocca) · Brunella Fiore (University of Milano-Bicocca) · Silvia Mugnano (University of Milano-Bicocca)
Unequal Access, Unequal Experiences: Housing Pathways of University Students with Migrant Backgrounds 1013
Alessandro Bozzetti (University of Bologna, Department of Political and Social Sciences, Italy)
Between Aspirations and Obligations: Identity Construction in the University Experience of Second-generation Youth 1014
Francesca Farruggia (Sapienza University of Rome) · Alessandro Ricci (Sapienza University of Rome)
'Feeling on a Mission'. Motivations and Educational Choices of Social Work Students with Migrant Backgrounds in Italy 1015
Clarissa Grande (University of Cagliari, Italy) · Francesca Messineo (Sapienza University of Rome, Italy)

H.20. Youth and Generations in the Contemporary Era: Exploring Social Change 1017

Youth and Social Adaptation: A Mertonian Perspective on Inequalities and Pathways into Adulthood 1017
Matteo Bonanni ('Sapienza' University of Rome)
Beyond Reproduction: Educational Discontinuity and Multiple Contingencies in Youth Trajectories 1018
Benedetto Pasanisi ("La Sapienza" University of Rome, Italy)
Navigating Precarity and Pathways to Adulthood: Young Adults in Greece and Italy 1019
Aglaia Farou (Sapienza University of Rome)
Effets de lieu and Visions of the Future: Young Entrepreneurs Navigating Place, Local Culture, and Structural Inequalities 1020
Ciro Cangiano (University of Naples Federico II, Italy)
Sparks Without Fire. Youth Condition, Identity and Social Change 1020
Roberto Flauto (Università degli Studi di Napoli Federico II, Italy)
Educational Aspirations and Family Formation Desires among Native and Migrant-background Adolescents Living in Italy 1021
Alessia de Vito (Università di Napoli Federico II) · Martina Bodo (Sapienza Università di Roma, Italy) · Alessio Buonomo (Università di Napoli Federico II) · Salvatore Strozza (Università di Napoli Federico II)
Understanding Peer Effects in Educational Choices: Insights from a Qualitative Meta-analysis of the Literature 1023
Nadia Crescenzo (University of Salerno, Italy) · Angela Pacca (University of Salerno, Italy)
The End of Synchronous Experience? A Cross-Cohort Analysis of Generational Transitions and Platformization of Cultural Exposure in Italy 1024
Rita Fornari (ISTAT, Italy) · Valentina Joffre (ISTAT, Italy)
Identity in Contemporary Adolescents: The Impact of Social and Digital Change 1025
Paolo Siclari (Pedagogista ed Educatore professionale)

H.21. Learning Democracy Across Life Contexts: Participation, Inclusion and Social Change 1026

Creating Arendtian Spaces of Appearance in Adult Civic Education: Fostering Plurality and Inclusion in Polarized Societies 1026
Konstantinos Mantzanaris (HELLENIC OPEN UNIVERSITY, Greece)
Intergenerational Learning Between Strategic Recognition And Resource Allocation Constraints: evidence from the Agemil project 1027
Virgilio Buscemi (Lattanzio KIBS SpA Benefit Corporation) · Roberto Angotti (INAPP, Italy) · Francesca Campisi (INAPP, Italy) · Luca Cuzzocrea (Lattanzio KIBS SpA Benefit Corporation) · Michael Schepisi (Lattanzio KIBS SpA Benefit Corporation)
Perspectives On Adult Education Through Flexible Validation Options 1028
Silvia Toneva (Sofia University "St. Kliment Ohridski", FEBA, Bulgaria)
Rules that Liberate: Play as a Transformative Experience in Prison 1028
Maria Sammarro (UNIVERSITA' MEDITERRANEA DI REGGIO CALABRIA, Italy) · Elena Zagari (UNIVERSITA' MEDITERRANEA DI REGGIO CALABRIA, Italy)
Taking Place: Migrant Youth Activism, Democratic Learning and Political Subjectification in the Gothenburg Sit-Strike 1029
Martin Harling (University of Malmö, Sweden)
Learning Democracy at Work Organizations as Spaces for Civic Learning in Times of Social Disconnection 1030
Maria Rita Fiasco (Self-Employed - Senior corporate trainer and Executive Coach, Italy)

H.22. Youth, Transitions and Educational Inequalities: Pathways, Identities and Practices 1031

From School to Work: Educational and Career Guidance, Future Expectations, and Social Inequalities 1031
Giorgia Altobelli (INDIRE, Italy)

Technical and Vocational Education and Training Quality: Empirical Evidence from IFTS Programmes 1032
Andrea Carlini (INAPP, Italy) · Claudia Spigola (INAPP, Italy)
Monitoring School Guidance to Tackle Social Inequalities: Evidence from Italian Schools 1033
Luca Andrea Fanelli (ActionAid Italia, Italy) · Eleonora Scrivo (ActionAid Italia, Italy)
Art-Based Social Work: An Ethnographic Study In The "Centro De Referencia Da Juventude Di Novo Horizonte" In Brazil 1034
Yasmin Frascaria (Università Milano Bicocca, Italy)
Between Visibility and Invisibility: Digital Identities and Social Media Practices Across Generations 1037
Rossella Marzullo (Università Mediterranea degli Studi di Reggio Calabria, Italy) · Davide Milasi (Università Mediterranea degli Studi di Reggio Calabria, Italy)

SPECIAL EVENT · **H.23. Hip Hop as Educational Ecology: Epistemologies, Pedagogical Frameworks, Youth Development, and the Challenge of Educational Inequality** 1038

STREAM I · UNIVERSITIES, ACADEMIC FREEDOM AND KNOWLEDGE POLITICS 1039

I.01. Can Universities Help to Solve the Crisis in Democracy? 1040

Leadership, Global Citizenship, and 21st Century Skills for Democracy in Higher Education 1040
Rita Kakati-Shah (Uma Global, United States of America)
Can Universities Help to Solve the Crisis in Democracy? 1041
Liviu Matei (King's College London, United Kingdom) · Roberta Piazza (Università di Catania)
Learning conflict-resolution using immersive Virtual Reality: a proof-of-concept study 1042
Elisa Cavatorta (King's College London, United Kingdom) · Asmaa Ezzat (University of Cairo, Egypt) · Sarah Mansour (University of Cairo, Egypt)
Bridging Knowledge and Society: Advancing the University's Third Mission 1042
Irena Zemaitaityte (Mykolas Romeris University, Lithuania) · Jolanta Pivoriene (Mykolas Romeris University, Lithuania) · Justina Garbauskaitė-Jakimovska (Mykolas Romeris University, Lithuania)
Civic Engagement And Democratic Renewal: American Higher Education And Liberal Democracy 1043
Eric Mlyn (Duke University, United States of America)
The Shared Construction of a Diffused University Museum as a Participatory Device 1044
Franca Zuccoli (Università degli Studi di Milano-Bicocca, Italy) · Rita Capurro (Università degli Studi di Milano-Bicocca, Italy)
Introducing Intersectionality In Teaching Staff Trainings To Foster Institutional Resilience 1045
Liudvika Leišytė (TU Dortmund University, Germany)

I.02. Designing Democratic Innovation: Alternative Practices for the Future of Academia 1046

Research Productivity and Community: Tensions, Breakdowns and Repairs in Writing Groups 1046
Lauren Beth Clark (UCL, United Kingdom)
Organizational Compass: Experimenting with Regenerative Processes within a Doctoral Team Abstract 1047
Daniele Bucci (ISIA Roma; Ecosistemica) · Thomas Kemps (Ecosistemica)
Mental Health in Contemporary Academia: Persistent Challenges and Emerging Frameworks from a Case study 1048
Antonella Verduci (Università degli studi di Bergamo, Italy) · Marta Pantalone (Università degli studi di Bergamo, Italy) · Annalisa Cristini (Università degli studi di Bergamo, Italy) · Luca Carollo (Università degli studi di Bergamo, Italy) · Massimiliano Barattucci (Università degli studi di Bergamo, Italy)
From Precarity to Collective Resource: Peer-Based Infrastructures of Solidarity and Knowledge as Democratic Innovation in Neoliberal Academia 1049
Martina Brighenti (University of Palermo, Italy) · Gennaro Veneziano Labanca (University of Milan-Bicocca, Italy)
Student Engagement and Civic Consciousness of Future Communicative Mediators: A Pilot Study in a Spanish University 1050
Cristina López-Navas (Universidad Complutense de Madrid, Spain) · Louis Pierre Philippe Homont (Universidad Complutense de Madrid, Spain) · José Antonio Alcoceba Hernando (Universidad Complutense de Madrid, Spain) · Laura Picazo Sanchez (Universidad Complutense de Madrid, Spain)
Impact Evaluation to Support Inclusive and Democratic University: the INSIGHT Project 1051
Paola Damiani (Universita Degli Studi Di Modena E Reggio Emilia, Italy) · Laura Landi (Universita Degli Studi Di Modena E Reggio Emilia, Italy) · Annamaria Gentile (Universita Degli Studi Di Modena E Reggio Emilia, Italy)
Democratizing Assessment Practices in Higher Education: A Student–Faculty Collaboration on Alternative Assessment at Athabasca University, Canada 1052
Rebeccah Nelems (Athabasca University, Canada) · Neenah Brown (Athabasca University Student Union, Athabasca University, Canada) · Faustina Arsenault (Athabasca University Student Union, Athabasca University, Canada) · Eliana El Khoury (Athabasca University, Canada) · Lorelei Hanson (Athabasca University, Canada)

I.03. Educating to Participate. Educational Innovation in University Systems as a Tool for Inclusion and Democratic Participation 1054

Cooperation as a rhetorical strategy? The European University Alliances and the challenge of democratic participation 1054
Paolo Brescia (University of Cagliari, Italy) · Andrea Lombardinilo (Roma Tre University, Italy)
Beyond Digital Infrastructure: Pedagogical Innovation And Democratic Participation In Mediterranean Universities Between Possibilities And Limits 1055
Alfonsina Mastrolia (Department of Communication and Social Research, "La Sapienza" University of Rome) · Viviana Capozza (National Institute for the Evaluation of the Education System (INVALSI))
Civic Participation and Civic Education: Institutional Perspectives from Germany and Teacher Training Practices in Italy 1056
Gernot Herzer (Institut für kommunale Planung und Entwicklung, Erfurt, Germany) · Doris Kofler (University of Bozen, Italy)
Orchestrating Democratic CBL For Climate Resilience: Institutional Design And An AI-Enabled Research Agenda 1057
Erik Kangilaski (TalTech, Estonia) · Riina Palu (TalTech, Estonia)
The Role Of Training Needs In Italian Universities: Three Experiences Of Inclusion Compared 1058
Isabel Maggiarra (Università di Parma, Italy)
The Role of Digital and Virtual Technologies to Rethink Inclusion in Sports Education 1059
Barbara Mazza (sapienza, Italy)

I.04. Higher Education Teaching Practices as Micro-spaces of Democracy and Resistance. What Does it Mean to be 'Political'? 1060

Practising Micro-Democracy in Transnational Higher Education: Participation, Inclusion and Academic Freedom within a Non-Western Institutional Context 1060
Peri Papadimitriou (Queen Margaret University, Scotland)

Having No Voice, Being Non-Citizens: The Political Dimension Of Community Service Learning Between Intersectionality And Social Innovation 1061
Luisa Zecca (University of Milan-Bicocca, Italy) · Rebecca Coacci (University of Milan-Bicocca, Italy) · Valeria Cotza (University of Milan-Bicocca, Italy) · Claudia Fredella (University of Milan-Bicocca, Italy) · Nagwa Hussein (University of Milan-Bicocca, Italy) · Petar Lefterov (University of Milan-Bicocca, Italy) · Lisa Sacerdote (University of Milan-Bicocca, Italy)

Beyond Devolution: Encouraging Co-agency as a Political Act 1062
Maila Pentucci (Università "d'Annunzio" di Chieti-Pescara, Italy) · Lorenza Maria Capolla (Università degli Studi di Macerata, Italy) · Lorella Giannandrea (Università degli Studi di Macerata, Italy) · Francesca Gratani (Università degli Studi di Macerata, Italy) · Pier Giuseppe Rossi (Università degli Studi di Macerata, Italy)

Physics Educators Challenging the 'Myth of Neutrality': a Comparative Case Study 1063
Michelangelo Panza (Università di Macerata, Italy) · Betzabè Torres-Olave (University of Groningen, Netherlands) · Toon Wijnen (Bornego College, Netherlands) · Lucy Avraamidou (University of Groningen, Netherlands)

Leaving the Last Word to Students: Thought and Resistance in Higher Education Teaching 1064
Daniela Manno (Università degli Studi Suor Orsola Benincasa, Italy)

Our "Daily" Bread: Educating for Critical Thinking between Information Fragments and AI 1065
Fernando Sarracino (Università Suor Orsola Benincasa, Italy) · Lucia Ariemma (Università della Campania "Luigi Vanvitelli")

Creative Teaching Practices With Digital Media That Transform The School Space:From The School Classroom To The University Degree 1066
Belén Dieste- gracias (University of Zaragoza, Spain) · Ana López-Medialdea (University of Extremadura, Spain) · Esperanza Cid-Romero (University of Zaragoza, Spain)

Teaching-as-Activism: Memory, Situated Co-creation, Re-thinking of Democracy 1067
Pier Cesare Rivoltella (Università di Bologna, Italy) · Chiara Panciroli (Università di Bologna, Italy)

Intentionality as Praxis: Resisting Epistemic Injustice in Democratic Education 1068
Alessia Signorelli (University of Perugia, Italy)

Student's alienation. An intersectional lens 1069
Lorenza Maria Capolla (University of Macerata, Italy) · Lorella Giannandrea (University of Macerata, Italy) · Francesca Gratani (University of Macerata, Italy) · Maila Pentucci (University "d'Annunzio", Chieti-Pescara, Italy) · Pier Giuseppe Rossi (University of Macerata, Italy)

I.05. Life Skills and Innovative Didactics as Drivers of Democratic Agency in Higher Education 1070

The Digital Dimension In PTSO's: Educational Configurations And Learning Practices 1070
Maria Dentale (University for Foreigners of Perugia, Italy) · Michela Cavagnuolo (San Raffaele University of Rome, Italy)

Innovative Teaching and Life Skills in Higher Education: A Pilot Study at Sapienza University of Rome 1071
Maria Paola Faggiano (Sapienza University of Rome, Italy) · Antonio Fasanella (Sapienza University of Rome, Italy) · Sergio Mauceri (Sapienza University of Rome, Italy)

Events as Learning Environments. An Innovative Teaching Laboratory During Uniforoitalico Sport Day 1072
Michela Cavagnuolo (San Raffaele Open University, Italy) · Francesca Romana Lenzi (University of Rome "Foro Italico") · Vincenzo Esposito (University of Salerno) · Matteo Donato (Phd Applicant)

Experiences Of Innovative Teaching In Higher Education Through Students' Narratives: Life Skills, Participation, And Democratic Agency Between Constraints And Opportunities 1073
Desiree Tabegna (Department of Communication and Social Research, Sapienza University Rome) · Alfonsina Mastrolia (Department of Communication and Social Research, Sapienza University Rome)

Life Skills and Self-Directed Learning: Perceived Competence Development in Educational Pathways 1074
Simona Cavallo (Sapienza Università di Roma, Italy) · Bianca Bonaccorsi (Sapienza Università di Roma, Italy) · Veronica Lo Presti (Sapienza Università di Roma, Italy)

Teaching Styles and Didactic Innovation: Differentiated Trajectories in the Development of Cognitive, Relational, and Socio-Emotional Competences within Lifelong Learning 1075
Laura Tolentino (Sapienza University of Rome, Italy) · Simona Cavallo (Sapienza University of Rome, Italy)

Implementing Challenge-Based Learning: Transdisciplinary Tools for EU Socio-Political Transitions 1076
Francesca Odella (University of Trento, Italy) · Alessandra Scroccaro (University of Trento, Italy)

I.06. New Social, Professional and Educational contexts: Rethinking the Italian University System 1077

Rethinking University Starting From Professional Contexts: Pedagogical Supervision As An Indicator Of A Training Mismatch 1077
Alice Femminini (Sapienza Università di Roma, Italy) · Irene Stanzione (Sapienza Università di Roma, Italy)

Academic Leadership as Pedagogical Infrastructure: A Meso-Institutional Reinterpretation of University Quality 1078
Cristiana Cardinali (LUMSA University Rome, Italy) · Maria Cinque (LUMSA University Rome, Italy)

Mapping Of Centers For Professional Development Of Teachers And Educational Innovation In Italian Universities 1079
Lucia Mentore (Università degli Studi di Macerata, Italia) · Noemi Russo (Università degli Studi del Molise, Italia)

Professional Development And Collegial Culture: The Potential Of Peer Observation Of Teaching For Rethinking The Mission Of University Teaching 1080
Aurora Torri (Università degli studi di Macerata) · Livia Cadei (Università Cattolica del Sacro Cuore)

New Perspectives on the Italian University System 1081
Simone Campanella (University of Macerata, Italy) · Gaga Gvenetadze (Ivane Javakhishvili Tbilisi State University, Georgia) · Tatsiana Karachun (University of Macerata, Italy) · Fatma Derya Arıkan (Burdur Mehmet Akif Ersoy University, Turkey) · Luca Refrigeri (University of Molise, Italy)

I.07. Organising As Workers In Higher Education: In, Against And Beyond The University 1083

Autoethnography, Adjunct Labour, and the Political Economy of Knowledge in South Africa and the Global South* 1083
Trevor Makhetha (University of the Western Cape, South Africa)

Fighting for the Future of Higher Education in Chicago 1084
Nicole Nguyen (University of Illinois at Chicago, United States of America)

Solidarity instead of Neutrality 1085
Pia Rojahn (University of Tuebingen, Germany)
From Academics to Education Workers: Building Cross-staff Solidarity and Forging Class Relations to Make Another University Possible 1085
Sol Gamsu (Durham University, United Kingdom)
Challenges of Organising Academic Workers in Germany: Loyalty, Asceticism and Precarious Labour Conditions 1086
Maria Keil (Justus-Liebig-University Giessen, Germany)

I.08. Rethinking the University: Public Engagement, Academic Autonomy and Transformative Knowledge Practices 1087

Adaptation Strategies For Navigating Complexity: An Empirical Research Among Working Students at Roma Tre University 1087
Alba Francesca Canta (Polytechnic of Turin, Italy) · Maria Alessandra Molè (Università Roma Tre, Italy)
Bridging University and Civil Society: Challenges and Opportunities in Fostering Public Engagement and Social Innovation 1088
Maria Chiara De Angelis (Link Campus University, Italy)
Instrumentalisation or democratic commitment? Local constraints and the adoption of Public Engagement in French universities 1089
Nicolas Brard (Université de Tours) · Elsa Poupardin (Université Paris Cité, France)
Community-Engaged Research and Learning in Higher Education: The TOGETHERNESS Project 1090
Valentina Ghibellini (University of Sassari, Italy) · Andrea Vargiu (University of Sassari, Italy) · Julie Plouhinec (sciences citoyennes) · Glen Millot (sciences citoyennes) · Catherine Bates (Technological University Dublin) · Zoryana Pshyk (Technological University Dublin) · Etienne Toffin (Université libre de Bruxelles)
How Can University Dropouts And Delays In Degree Completion Be Addressed? 1091
Casavecchia Andrea (Università di Roma Tre, Italy)
Studying Academic Temporalities through “Temporal Paradigms”: A Survey-Based Typology of Italian Professors and Fixed-Term Researchers 1092
Lorenzo Barbanera (Università di Genova, Italy)
Universities as Agents of Social Innovation through Public Engagement Projects 1093
Maria Letizia Guerra (University of Bologna, Italy) · Valeria Carpené (University of Bologna, Italy) · Filippo Sartor (University of Bologna, Italy)
University and Cognitive Capitalism 1093
Agostino D'Amico (Università degli Studi di Bari Aldo Moro, Italy)

I.09. The Democratic Turn in University STEM Education 1094

The Embedding Model: Integrating Meta-technoscientific Competences in STEM Education 1094
Paolo Volonté (Politecnico di Milano, Italy) · Simona Chiodo (Politecnico di Milano, Italy) · Viola Schiaffonati (Politecnico di Milano, Italy)
Fostering Critical Thinking Through The “Tribunal For The Future Generations” Pedagogical Project: Project Structure, Student Development, And Impact Of Tribunal-Based Learning 1095
Lola Lilensten (CNRS IRCP UMR8247, Paris, France) · Lluis Pino (Independent professional lecturer) · Dalel Bouzid (IUT de Saint-Denis, Place du 8 mai 1945, 93120 Saint-Denis, France) · Guy Dirras (IUT de Saint-Denis, Place du 8 mai 1945, 93120 Saint-Denis, France) · Marie-Hélène Vigliano (IUT de Saint-Denis, Place du 8 mai 1945, 93120 Saint-Denis, France)
Citizens’ Assemblies as Assessment: Cultivating Reflexive Scientists Through Democratic Pedagogies in Doctoral STEM Education 1096
Ilija Rašović (University of Birmingham, United Kingdom) · Kylee Goode (University of Birmingham, United Kingdom)
From Training To Transformation: the Ispra Experience For Organizational Culture Change Through A Gender Lens 1097
Nadia Sbreglia (Istituto superiore per la protezione e la ricerca ambientale, Italy) · Katia Carcone (Istituto superiore per la protezione e la ricerca ambientale, Italy)
STEM with a Critical Edge: A Systematic Review of Humanities-integrated Pedagogies 1098
Addisalem Yallew (Cape Peninsula University of Technology, South Africa)
Teaching How to Think: Intellectual Skills and Medical Education in the Scottish Enlightenment 1098
Serena Mambriani (University of Parma, Italy)

I.12. Whose University is it? Neoliberal Governance: The Challenge to Academic Freedom, Equity, and Critical Thinking 1100

Whose Knowledge, Whose University? Academic Freedom and Equity under Neoliberal Higher Education Governance 1100
Miwako Hosoda (Seisa Uinversity, University of Tokyo, Japan)
Shaping the Role of Artificial Intelligence in Higher Education: Policy Directions in Italy and Norway 1101
Catherine Edelhard Tømte (University of Agder, Norway) · Silvia Zanazzi (Università di Ferrara, Italy)
The Mirror-Box Bias in the Neoliberal University: Generative AI, the Crisis of Humanitas, and Critical Thinking 1102
Marco Cadavero (University of Bologna, Italy) · Nicolo' Brandizzi (Fraunhofer Institute for Intelligent Analysis and Information Systems (IAIS), Sankt Augustin, Germany) · David Vagni (Institute for Biomedical Research and Innovation, National Research Council (IRIB-CNR), Rome, Italy)
Navigating the AI Turn in Teacher Education: Compliance, Control or Creative Renewal? 1103
Catherine Edelhard Tømte (Dept. Of Information Systems, University Of Agder, Norway) · Synnøve H. Amdam (Dept. of Pedagogic, Volda University College, Norway) · Ann-Thérèse Arstorp (Dept. of Educational Science, University of South-Eastern Norway) · Mari-Ann Letnes (Dept. of Teacher Education, Norwegian University of Science and Technology) · Ilka Nagel (Dept. of Education, ICT and Learning, Østfold University College)
Education to Co-authorship Between AI Equity and Academic Autonomy 1104
Anselmo Paolone (Università di Udine, Italy) · Daniel Boccacci (Università di Ferrara, Italy)
When Democratic Education itself Becomes Instrumental: Democratic and Economic Utility in the Neoliberal University 1105
Rūta Petkutė (Vilnius University)
Predictive Governance in Higher Education: Early Intervention, Critical Taxonomy, and the Tension between Institutional Care and Neoliberal Rationality 1106
Massimo Marcuccio (Alma Mater Studiorum - Università di Bologna, Italy) · Sofia Torresani (Sapienza - Università di Roma) · Maria Elena Tassinari (Alma Mater Studiorum - Università di Bologna, Italy)
Bridging or Surveilling? Conversational AI and the Future of Knowledge Gatekeeping in Higher Education 1107
David Vagni (Institute for Research and Innovation in Biomedicine - Italian National Research Council (IRIB-CNR), Italy)
Just Giving? The Growing Emphasis on Philanthropy and Donations in the UK Universities Sector 1108
Kirsty Finn (University of Manchester, United Kingdom)
University Presses at the Crossroads: Open Access, Neoliberal Governance and the Future of Academic Freedom 1109
Silvia Pezzoli (University of Florence, Italy) · Donatella Selva (Luiss Guido Carli) · Andrea Girometti (University of Urbino)

I.13. Didactic Innovation, Participatory Education and Democratic Values in Higher Education 1110

The PhD Research as a Democratic Device: a Quantitative-Qualitative Survey 1110
Cristiano Zappa (Università Telematica eCampus Novedrate CO, Italy) · Giulia Rocchi (Università Telematica eCampus Novedrate CO, Italy)

Preparing Competent Early Childhood Educators: Evaluating Quality In Online Pedagogy Laboratory 1111
Giulia Rocchi (Università eCampus, Italy) · Maria Serena Rivetta (Università eCampus, Italy)

Photovoice in Higher Education for Developing Life Skills, Reflective Participation and Democratic Agency 1112
Chiara Bottaro (Unversità degli studi di Padova, Italy)

University Academic Tutoring Services As Spaces For The Democratic Participation And The Empowerment Of Student Tutors 1113
Giovanni Moretti (Università Roma Tre Dipartimento Scienze della Formazione, Italy) · Piervito Giovane (Università Roma Tre Dipartimento Scienze della Formazione, Italy) · Francesca Gabrielli (Università Roma Tre Dipartimento Scienze della Formazione, Italy)

Authentic Tasks in Higher Education: Towards an Interdisciplinary Model for Competency-Based Design and Assessment 1113
Luciana Rossi (IUSVE, Italy) · Maria Chiara Cianfriglia (IUSVE, Italy) · Pierangelo Bordignon (IUSVE, Italy) · Sonia Marcon (IUSVE, Italy)

Teaching Politically: Against the Myth of Neutral Education 1115
Tatiana Motterle Motterle (University of Padova, Italy)

STREAM L · ECOLOGIES, ETHICS, AND POSTHUMAN FUTURES 1117

L.01. Building Peaceful, Just, and Democratic Societies through Transformative Education 1118

Open Knowledge, Transformative Education And Textbooks 1118
Adriana Valente (CNR IRPPS, Italy) · Valentina Tudisca (CNR IRPPS, Italy) · Silvia Caravita (CNR IRPPS, Italy)

Margins, Vulnerability, and Transformation: Philoctetes and bell hooks as a Pedagogical Laboratory for Positive Peace 1119
Ilaria Santilli (Uniroma1, Italy) · Altomare Distaso (Uniroma1, Italy)

The System Of Responsibilities Democracy Is Not Taught; It Is Lived In Mutual Care. 1120
Marco Orsi (Università di Firenze) · Sonia Claris (Fondazione Senza Zaino, Italy) · Giulia Zucchetto (Fondazione Senza Zaino, Italy) · Elisabetta Nannizzi (Fondazione Senza Zaino, Italy)

Peace Education in Initial Teacher Training: Curriculum, Institutional Practices and Professional Identity Building 1121
Sonia Castro Mallamaci (Scuola universitaria professionale della Svizzera italiana, Switzerland) · Andrea Plata (Scuola universitaria professionale della Svizzera italiana, Switzerland) · Marco Lupatini (Scuola universitaria professionale della Svizzera italiana, Switzerland)

Toward Positive Peace through Open Science: Transformative Education in Research Infrastructures - the FOSSR case 1122
Serena Fabrizio (CNR-IRCrES Research Institute on Sustainable Economic Growth, National Research Council of Italy, Rome, Italy) · Claudia Pennacchiotti (CNR-IRPPS Institute for Research on Population and Social Policies, National Research Council of Italy, Rome, Italy) · Andrea Orazio Spinello (CNR-IRCrES Research Institute on Sustainable Economic Growth, National Research Council of Italy, Rome, Italy)

Engendering City as a Practice of Transformative Education 1123
Chiara Belingardi (ISTC - CNR, Italy) · Gabriella Esposito De Vita (IRISS - CNR, Italy) · Stefania Ragozino (IRISS - CNR, Italy)

Alphabets of Peace in Wartime Education: Service-Learning as a Transformative Pedagogy for Ukraine's Recovery 1124
Ioana Zagrean (Lumsa University, Italy) · Irene Culcasi (Lumsa University, Italy) · Maria Cinque (Lumsa University, Italy)

Educating for Peace in Times of War: Transformative Education in the Movimento di Cooperazione Educativa and Its Journal 1125
Valentina Marconi (Movimento di Cooperazione Educativa, Italy) · Alberto Speroni (Movimento di Cooperazione Educativa, Italy) · Raffaella Maggiolo (Movimento di Cooperazione Educativa, Italy) · Giovanna Cagliari (Movimento di Cooperazione Educativa, Italy) · Domenico Campana (Movimento di Cooperazione Educativa, Italy)

L.02. Ecological Narratives and Biodiverse Education: Reimagining Worlds Through Critical Pedagogy 1126

Fostering the Ecological Self Through a Place-based Council of All Beings in Environmental Education 1126
Stavroula Stoumpou (University of Thessaly, Greece) · Irida Tsevreni (University of Thessaly, Greece)

Documenting Biodiversity in Early Childhood Outdoor Education: Artistic and Visual Practices for Ecological Understanding 1127
Letizia Luini (Università degli Studi di Milano-Bicocca, Italy)

From Treesense to Feeling with Plants: Early Insights from a Plant-Based Reflective Diary in Teacher Education 1128
Beate Christine Weyland (Free University of Bolzano, Italy)

The Loss of Biodiversity as a Hyperobject. Implications for a World-based Education 1129
Andrea Galimberti (University of Milano-Bicocca, Italy)

Developing Climate Change Awareness Within the Context of Global Citizenship Education. The Venice Lagoon as a Laboratory: a Case Study 1130
Giovanna Barzanò (Indipendent researcher, Italy) · Simonetta Boscolo Nale (IC Sottomarina Sud Chioggia) · Maria Grazia Giovanna Chillemi (Università Roma Tre) · Pasqualina Morzillo (WWF Italia) · Matteo Quarta (Accademia di Arti e Nuove Tecnologie) · Silvia Rova (International Centre for Climate Change Research and Studies) · Maria Beatrice Ligorio (Università degli Studi di Bari)

Problematising Education for Sustainable Development: Critical and Decolonial Approaches to Rethink Teacher Professionalism 1131
Marta Ilardo (Department of Education Studies "Giovanni Maria Bertin", Italy) · Marta Salinaro (Department of Education Studies "Giovanni Maria Bertin", Italy)

Maps as Counter-Narratives: Documenting Ecological Relationships through Participatory Mapping in Environmental Education 1132
Letizia Luini (Università degli Studi di Milano-Bicocca, Italy)

The Practice of the Gaze as an Ecological Posture: towards an Education based on Reciprocity between Subjects and the World 1133
Monica Guerra (Università di Milano-Bicocca, Italy)

Biozine: Narrating Ecological Relationships through a Collective Fanzine 1133
Greta Persico (Università degli Studi di Milano Bicocca, Italy)

The Fireflies of Oral Tradition 1134
Silvestro Malara (Università Mediterranea degli studi di Reggio Calabria, Italy)

L.03. Ecologies of Education and Democracy in Posthuman Times: More and Less-than-human Troubles 1135

The Terrestrial Condition: Promoting Transpersonal Consciousness Through The Eco-Theatre Laboratory 1135
Elisabetta Villano (University of Salerno, Italy) · Paola Martino (University of Salerno, Italy)

Immanent Relationality and Ecodidactics: A Heuristic Research on Material Latencies and Subjective Assemblages in the Short Story "The Veldt" 1136
Raffaella Carmen Strongoli (Università degli Studi di Catania, Italy)

Interruption And Connection: Movements for a democratic education 1137
Chiara Buzzacchi (Università degli Studi di Milano-Bicocca, Italy) · Guendalina Cucuzza (Università degli Studi di Milano-Bicocca, Italy)
Critical Transfeminist Posthumanism in Education: Deconstructing Hierarchies for Ecological and Democratic Pedagogies 1138
Chiara Borelli (University of Bologna, Italy)
Towards the Democratisation of Educational Processes: The Entanglement of Pedagogical Reflection, Technological Development and Ecological Thinking 1139
Maria Brembilla (Università degli Studi di Bergamo)
From Humanism To The Pluriverse: Rethinking Education For Multispecies Democracy In More-than-Human Worlds 1140
Giusi Boaretto (Libera Università di Bolzano-Bozen, Italy) · Michele Cagol (Libera Università di Bolzano-Bozen, Italy)
Pedagogical Reflections for the Anthropocene: Co-existing and Educating in Times of Ecological Justice 1141
Cristina Delgado Vintimilla (York University, Canada)

L.05. Living together, Co-Governing, Becoming: More-than-Human Futures for Democracy in Education 1142

From Platform Extractivism to More-than-Human Co-Governance: Ecosystemic Third Mission, Teacher Agency and Territorial Cohesion in Southern Salento (Italy) 1142
Corrado Russo (CNR IMAA, Italy)
Automating Knowledge through Generative AI? Foregrounding More-than-human Infrastructures in Higher Education 1143
Magda Pischetola (University of Copenhagen, Denmark)
More-Than-Human Education Governance and AI: Analytical Tools For Policy 1144
Francesca Peruzzo (University of Birmingham, United Kingdom) · Paolo Landri (CNR, Naples)
“I’m Desperately Seeking The Answer, Please Help ;) <3”: Emerging Knowledge In A Sociomaterial Analysis Of A Facebook Group Of Special Education Teachers 1145
Camila Moyano Dávila (Departamento de Sociología, Universidad de Chile, Chile) · Juan de Dios Oyarzún (Pontificia Universidad Católica de Valparaíso) · Francisca Gallegos Jara (Departamento de Sociología Universidad Alberto Hurtado,) · Gabriela Rebagliati Meersohn (Center for Advanced Research in Education (CIAE), Institute of Education, University of Chile.) · Ismael Tabilo Prieto (Family Science School, Universidad Finis Terrae/ Facultad de Ciencias Sociales, Universidad Alberto Hurtado)
What Is At Stake? The Ambivalence Of Productivity In The AI-Mediated University 1147
Lia Volpe (Sapienza University of Rome, Italy)
More-Than-Human Education Governance and Radical Democracy 1150
Paolo Landri (CNR-IRISS, Italy)

L.06. Porous Educational Landscapes: Interdisciplinary Approaches to Democratic Spaces 1151

Democracy Needs Space: Porosity and Participation in Educational Landscapes 1151
Petra Regina Moog (Sophia::Academy, Germany)
Beyond the Ivory Tower: Porous Educational Landscapes as Democratic Practice at TU Wien 1152
Karin Katharina Tielsch (Vienna University of Technology, Austria)
Beyond the School: Training Spatial Porosity Across Pedagogy, Architecture, and Nature. The Case of EDENSPACES 1153
Simona Galateo (Free University of Bolzano, Italy) · Beate Weyland (Free University of Bolzano, Italy)
From Waste to Workshop: Upcycling as a Porous Infrastructure for Democratic Engineering Education 1154
Alexander Pichlhöfer (Research Unit of Ecological Building Technologies, Institute of Material Technology,Building Physics and Building Ecology, Faculty of Civil and Environmental Engineering, Vienna University of Technology, Austria) · Bianca-Maria Köck (Research Unit of Process Systems Engineering, Institute of Chemical, Environmental and Bioscience Engineering, Faculty of Technical Chemistry, Vienna University of Technology, Austria)
Dialogical Processes and the Co-Design of Porous Educational Landscapes in Higher Education 1155
Cornelia Dinsleder (University of Teacher Education Lucerne, Switzerland) · Ulrich Kirchgässner (University of Teacher Education Lucerne, Switzerland) · Eliya Pagelli (University of Teacher Education Lucerne, Switzerland)
Educational Landscapes and Urban Resilience: Reimagining Schools as Socio-ecological Nodes. The Case of Savona 1156
Alessandro Frigerio (Politecnico di Milano, Italy)
School as a Common Good: A Porous Plant Nursery linking Archaeology, Nature and Collaborative Art in Taranto 1157
Bruna Sigillo (Free University of Bozen, Italy) · Teresa Gargiulo (Istituto Comprensivo Alessandro Volta di Taranto)
The Thickness of the Border. Landscape Design as Peace Infrastructure 1157
Angela Palmitessa (Università Sapienza, Italy)
Land Art as a Pedagogical Language for Sustainability in Early Childhood Education: Place, Community, and Embodied Learning 1158
Michela Bongiorno (INDIRE, Italy) · Alessia Rosa (INDIRE, Italy)
Designing Porous Multispecies Educational Landscapes: An Interdisciplinary Study Across Pedagogy, Architecture, And Design 1159
Giusi Boaretto (Libera Università di Bolzano-BozenItaly)

L.07. Rethinking Care and Learning Within the Posthuman Turn 1160

Imagining A Relational Ethics of Becoming At The Heart Education 1160
Jesse Bazzul (University of Regina, Canada)
Minor Infrastructures: Ethics and World-Making in Early Childhood Education 1161
Emily Ashton (University of New Brunswick, Canada) · Nancy van Groll (Capilano University, Canada) · JoAnna Rickard (University of New Brunswick, Canada)
Caring For Responsible Academic Practice In Times Of Generative AI 1162
Susanne Oechsner (TU Wien, Austria) · Fynn Thjorben Semken (TU Wien, Austria)
Learning to Live with Robots: Social Robotics and Response-ability in Dementia Care Practices 1163
Ludovica Rubini (University of Trieste, Italy) · Francesco Miele (University of Trieste, Italy)
Multispecies Education 1164
Assunta Viteritti (Sapienza, Università di Roma, Italy)
Democratizing Reproductive Knoweledge: Edutainment, Platforms, and the influ-activist doctors 1164
Letizia Zampino (University of Trento, Italy)
Enactive Assemblages: Exploring the Bodily Dimension of Learning in Immersive Technology-Enabled Environments. Insights from a Literature Review. 1165
Andrea Di Gallo (University of Milano-Bicocca, Italy)

L.08. Scientific Citizenship at the Boundaries: Re-Enacting Science Practices for Democratic Futures 1167

Historical Scientific Instruments as Tools for Nature of Science Reflection in Teacher Professional Development 1167
Stefania Lippiello (University of Padova, Italy) · Lucia Gabelli (University of Padova, Italy) · Marta Carli (University of Padova, Italy)

Re-enacting The Complexity Of Scientific Research Practices In Higher Education Through Cinematic Narratives 1168
Leonardo De Deo (Dept. of Physics and Astronomy, University of Bologna, Via Gobetti 93/2, 40129 Bologna, Italy; INAF - Osservatorio di Astrofisica e Scienza dello Spazio di Bologna, Via Gobetti 93/3, 40129 Bologna, Italy) · Olivia Levrini (Dept. of Physics and Astronomy, University of Bologna, Via Gobetti 93/2, 40129 Bologna, Italy) · Fabrizio Villa (INAF - Osservatorio di Astrofisica e Scienza dello Spazio di Bologna, Via Gobetti 93/3, 40129 Bologna, Italy) · Sara Ricciardi (INAF - Osservatorio di Astrofisica e Scienza dello Spazio di Bologna, Via Gobetti 93/3, 40129 Bologna, Italy; Dept. of Science Education, University of Bologna, Via Filippo Re 6, 40126 Bologna, Italy)

An Experimental Activity In The Chemistry Laboratory For In-service Science Teacher Training 1169
Marco Neviani (Università di Bologna, Dipartimento di Chimica Industriale "Toso Montanari", Italy) · Sergio Zappoli (Università di Bologna, Dipartimento di Chimica Industriale "Toso Montanari", Italy) · David Cross (Université de Montpellier et Université de Montpellier Paul Valéry, LIRDEF, France)

Cultivating Scientific Citizenship through Playfulness: The third time of tinkering in Primary Science 1170
Adele Bracci (Istituto Comprensivo di Pianoro, Italy) · Antonia Carbone (Istituto Comprensivo n. 11, Bologna, Italy) · Stefano Rini (University of Bologna) · Sara Ricciardi (INAF Astrophysics and Space Science Observatory Bologna)

Reinventing Futures. Encounters and engagements in a favela complex in Rio de Janeiro, Brazil 1171
Agata Mazzeo (Università di Bologna, Italy) · Cleidiana Antunes da Silva (Ninho das Águias, Brazil) · Cláudio Alberto Barbosa Araujo (PPG astro club, Brazil) · Arianna Cortesi (Universidade Federal do Rio de Janeiro, Brazil) · Carlos Esquivel da Silva (Ninho das Águias, Brazil) · Claudia Mignone (Istituto Nazionale di Astrofisica, Italy)

Future Teachers in Contested Times: Science-Related Populism, Epistemic Trust, and Science Education 1172
Stefano Pasta (Catholic University of the Sacred Heart, Italy) · Alessandra Carenzio (Catholic University of the Sacred Heart, Italy) · Simona Ferrari (Catholic University of the Sacred Heart, Italy) · Federica Pelizzari (Catholic University of the Sacred Heart, Italy)

STREAM M · DIGITAL POWER: AI, DATAFICATION, MEDIA AND DISINFORMATION 1174

M.01. Beyond the Screen: Educational Mediation, Children's Rights, and Digital Citizenship in Early Childhood 1175

Art as a Generative Encounter: Educational Practices in Early Childhood and Infant Education and Media Education 1175
Angela Daniela Sortino (Università di Palermo, Italy)

Digitalization in Early Childhood: A Quantitative Study on Parental and Professional Mediation Strategies in the 0-6 Context 1176
Renata Metastasio (Sapienza University of Rome, Italy) · Fabio Presaghi (Sapienza University of Rome, Italy) · Franca Rossi (Sapienza University of Rome, Italy) · Ilaria Bortolotti (Sapienza University of Rome, Italy) · Francesca Russo (Sapienza University of Rome, Italy)

Promoting Media Education in the Educational System 06 1177
Gabriele Lugaro (CED Centro per l'Educazione al Digitale A.P.S., Italy) · Jacopo Ferro (CED Centro per l'Educazione al Digitale A.P.S., Italy)

Digital Media Education. Analysis And Proposal Of A Guideline System From Empirical Evidence On Field Throughout Italian School 1178
Jacopo Ferro (CED Centro per l'Educazione al Digitale A.P.S., Italy) · Gabriele Lugaro (CED Centro per l'Educazione al Digitale A.P.S., Italy)

When Toys Talk Back: Anthropomorphization, Datafication, and a New Media Education Agenda for Early Childhood 1178
Michele Marangi (Università eCampus, Italy) · Matteo Adamoli (Università eCampus, Italy)

M.02. Convivial Pedagogies for the Age of AI: Autonomy, Bias Awareness, and Democratic Non-Homogenization 1180

Beyond the Single Answer: Convivial AI Practices for Dialogic Knowledge Co-Construction in Upper Secondary Education 1180
Giulia Valentini (SIPEIA, Italy) · Maurizio Valentini (SIPEIA, Italy)

Convivial Personalism as a Philosophical Foundation of Education 1181
Bernard Hostić (Institute of Philosophy, Croatia)

Convivial Futures: Educating to Democratic Agency and Social Justice in the Age of AI 1182
Valeria Piras (Istituto per le Tecnologie Didattiche, Consiglio Nazionale delle Ricerche (ITD - CNR), Italy) · Stefania Bocconi (Istituto per le Tecnologie Didattiche, Consiglio Nazionale delle Ricerche (ITD - CNR), Italy)

Towards a Digital Realism. Iris Murdoch and Digital Education 1183
Viviana Vozzo (Sapienza University of Rome, Italy)

Algorithmic Conviviality Against Digital Oppression 1184
Giordana Truscelli (Università degli Studi di Teramo, Italy)

Convivial Threshold Design for Ancient Greek with Generative AI: Autonomy, Bias, Democratic Plurality 1184
Bruna Capuzza (Università di Bologna, Italy)

Human-Centered Artificial Intelligence, Emotional Intelligence, and Pedagogies of Conviviality: Reframing AI and Education for Democratic Learning in Complex Systems 1185
Matteo Ciaschi (National Research Council (CNR), Italy) · Daniel Dan (School of Applied Data Science, Modul University Vienna, Austria)

Human-in-the-Loop AI-Generated Flashcards: A Convivial Framework for Ethical Integration and Professional Autonomy in Emergency Medicine 1186
Antonella Fontana (Department of Life, Health and Environmental Sciences (MESVA), University of L'Aquila, Italy) · Antonio Cirella (Department of Life, Health and Environmental Sciences (MESVA), University of L'Aquila, Italy) · Silvano Junior Santini (Department of Life, Health and Environmental Sciences (MESVA), University of L'Aquila, Italy) · Valerio Caputo (Department of Life, Health and Environmental Sciences (MESVA), University of L'Aquila, Italy) · Ivan Letteri (Department of Life, Health and Environmental Sciences (MESVA), University of L'Aquila, Italy) · Pierpaolo Vittorini (Department of Life, Health and Environmental Sciences (MESVA), University of L'Aquila, Italy) · Clara Balsano (Department of Life, Health and Environmental Sciences (MESVA), University of L'Aquila, Italy; Geriatric Unit, Department of Life, Health and Environmental Sciences, University of L'Aquila, L'Aquila, Italy)

Logic-Constrained Prompt Learning for Euclidean Geometry Education 1187
Simone Cuconato (Department of Physics, University of Calabria, Rende, Italy) · Roberto Beneduci (Department of Physics, University of Calabria, Rende, Italy; National Institute of Nuclear Physics (INFN), Rome, Italy) · Alberto Saracco (Department of Mathematical, Physical and Computer Sciences, University of Parma, Parma, Italy)

Using, Not Being Used: Toward a Convivial Pedagogy of AI with Adolescents 1188
Emiliana Murgia (University of Foggia) · Filippo Bruni (University of Molise)

M.03. Critical Dialogue with AI in Schools: Metacognition, Agency, and Democratic Learning 1189

Critical Dialogue with AI in Mathematics Education: Metacognition, Agency, And Teacher Mediation in a Classical High School Context 1189
Manuela Pipitone (Liceo Ginnasio Statale "Francesco Scaduto" - Bagheria, Italia)

Who Controls Whom? Developing Metacognitive Agency Through AI-Resistant Debate in an Italian Secondary School 1190
Giulia Calogero (IISS DON MILANI PERTINI MORANTE - GROTTAGLIE (TA), Italy)

Reframing Bloom's Taxonomy for the AI Age: From Knowledge Reproduction to Democratic Agency 1191
Giulia Calogero (IISS DON MILANI PERTINI MORANTE - GROTTAGLIE (TA), Italy)

From Teacher Mediation To Student Agency: The PAIDEIA Model For Critical Integration Of AI 1192
Elisa Saraceni (University of Macerata, Italy) · Benedetta Petroselli (University of Macerata, Italy) · Emanuele Frontoni (University of Macerata, Italy) · Carmelo Mustica (Laboratorio delle Idee)

From Spectators to Authors: A Collaborative School-Work Module on AI Literacy, Podcast Production and the Conditions of Critical Agency 1193
Giulia Lorenzoni (Liceo Muratori San Carlo Modena, Italy) · Arianna Giannone (Talent srl) · Lorenzo Cesaretti (Talent srl) · Federica Marchesini (Talent srl)

Algorithmic Bias, Student Agency and Critical Dialogue: A Two-Level Analysis of Territorial Evidence and International Pedagogical Case Studies 1194
Matteo Angeloni (Università degli Studi della Tuscia, Italy)

Delegation Or Deliberation? AI, Metacognition And Democratic Agency In A Classical High School 1195
Daniela Canfarotta (Liceo Ginnasio di Stato "Francesco Scaduto" (Bagheria, Palermo), Italy)

Designing AI to Avoid Cognitive Delegation: A Metacognitive Tutoring Model for Critical AI Literacy in Secondary Education 1195
Luca Addiucci (Sapienza, Italy) · Marco Temperini (Sapienza, Italy)

Dialogic Metacognitive Protocols for Ancient Greek: Preserving Teacher Judgment and Student Agency with Generative AI 1196
Bruna Capuzza (Università di Bologna, Italy)

AI as Agents to Think With: A Constructionist Framework for AI usage 1197
Lorenzo Natali (Università di Genova; ITD/CnR)

Metacognitive AI Literacy Across Contexts: Empirical Evidence from the rAIse Framework 1198
Nadia Sansone (UnitelmaSapienza University of Rome, Italy)

Artificial Intelligence as a Sociological Object for Student Reflexivity: A Classroom Laboratory on Knowledge, Bias and Digital Mediation 1199
Claudia Jiménez-Rodríguez (Universidad Antonio de Nebrija, Spain; Università di Torino, Italy) · Simona Tirocchi (Università di Torino, Italy) · Federica Cretazzo (Università degli Studi di Milano-Bicocca, Italy)

Beyond the Antinomy. Generative Artificial Intelligence in Schools Between Support and Reliance 1200
Giacomo Astorri (University of Bologna, Italy)

Governing AI Interaction: Metacognitive Profiles, Self-Assessment, and Peer Feedback in a rAIse-Structured E-tivity 1201
Nadia Sansone (UnitelmaSapienza University of Rome, Italy) · Ilaria Bortolotti (UnitelmaSapienza University of Rome, Italy)

Critical Dialogue with AI in Civic Education: Teacher Mediation, Metacognition and Democratic Agency in Lower Secondary School 1202
Lucia Iannucci (I.C. Pescara 8 - Scuola secondaria di primo grado "Tinozzi", Italy)

Questioning the Machine: a Socratic Chatbot and Metacognitive Gains Among Pre-service Teachers 1202
Maria Ranieri (University of Florence, Italy) · Gabriele Biagini (University of Florence, Italy) · Giulia Cuozzo (University of Florence, Italy)

Partner, Not Creator: Evaluating Product Creativity of AI-supported Storyboard Writing in Marginalized Educational Contexts 1203
Fabrizio Lo Presti (Istituto per le Tecnologie Didattiche - Consiglio Nazionale delle Ricerche, Italy; Università degli Studi di Modena e Reggio Emilia, Italy) · Giuseppina Rita Jose Mangione (INDIRE Firenze, Italy) · Manuel Gentile (Istituto per le Tecnologie Didattiche - Consiglio Nazionale delle Ricerche, Italy)

AI-Supported School Visions: Multi-Agent Systems and Teacher Agency in Small and Rural Schools 1204
Lydia Zampolini (INDIRE Firenze, Italy) · Giuseppina Rita Jose Mangione (INDIRE Firenze, Italy) · Manuel Gentile (ITD-CNR Palermo, Italy)

M.04. Democracy Education and A.I. in the Geopolitical Disorder. A Proposal for a New Democratic Citizenship 1206

Populism, Affective Mediatization, and Digital Governance: Reconfiguring Leadership and Democracy in Europe 1206
Elena Varotto (UCAM UNIVERSITY/SISP MEMBER, Italy)

Epistemic Vulnerability and AI: a new Ethical Challenge in Life-long Education 1207
Aldo Pisano (University of Calabria, Italy)

Educational Communication and Democracy at School: Didactic Mediation, Digital Environments and Educational Responsibility 1208
Antonio Corbo (Ministero dell'Istruzione e del Merito, Italy)

Artificial Intelligence and School: Pedagogical, Ethical, and Democratic Challenges in Contemporary Education 1209
Alessia Notti (University of Salerno, Italy)

Rethinking Democratic Bildung: Teacher Educators' Perspectives on Generative AI 1210
Synnøve H. Amdam (Volda University College, Norway) · Ann-Therese Arstorp (University of South-Eastern Norway) · Mari-Ann Letnes (Norwegian University of Science and Technology) · Ilka Nagel (Østfold University College, Norway) · Cathrine E. Tømte (University of Agder, Norway)

Civic Education Teaching in Italian Schools: The Contribution of Law 92/2019 to Democratic Education in Contemporary Society 1211
Carolina Leva (Università della Basilicata, Italy)

Democratic Citizenship and Cultural Heritage Education: Social Impact Assessment for the AI Era 1211
Claudio De Luca (University of Basilicata, Italy) · Vincenzo Nunzio Scalcione (University of Basilicata, Italy)

The Delicate Issue of the New Citizenship Education and of the Education for the New Citizenship Supported by Digital Technologies for Sharing Common Values and Rules in Democracy 1213
Alessio Annino (University of Catania, Italy)

Hybrid Teaching and Fundamental Skills: Rethinking Curriculum in the Age of Artificial Intelligence 1214
Andrea Cirolia (Università della Basilicata, Italy)

AI Literacy as Democratic Education: Reconstructing Citizenship in the Age of Disinformation 1214
Giuseppe Nobile (Università degli Studi della Basilicata, Italy)

Civic Education and New Frontiers of Education in the Age of AI 1215
Antonella Tiano (Unibas, Italy)

The Experience Of Art As A Contrast To Disinformation. Reflections On Knowledge, Education, And Democracy In The Age Of Epistemia 1216
Vincenza Costantino (Università degli studi "G. d'Annunzio" Chieti-Pescara, Italy)

M.05. Democracy in the Infosphere: Educational Strategies for Active Citizenship 1217

Playful Activism in Youth Citizenship and New Forms of Political Participation Among Pre-Teens 1217
Geremia Trinchese (Università La Sapienza, Italy)

Influ-activists Shaping Political Participation: Publics' Negotiations between Personalised Fandom and Feminist Engagement 1218
Sabrina Brignoli (Università degli Studi di Urbino Carlo Bo, Italy)

Communicating Europe in the Post-Digital Era: Youth Participation, Europeanization and Civic Agency 1219
Marinella Belluati (University of Turin) · Marta Fornacini (University of Turin; University of Genova) · Sara Pane (University of Turin)

Contesting the Past in the Digital Infosphere: Narrative Fragmentation and Media Literacy Regarding the Nanjing Massacre among Youth 1220
Haoxuan Diao (Sapienza University of Rome, Italy)

Resisting Gentrification and Privatization of Public Green Spaces Through Participative Democratic Practice: The Case of Ex Mercati Generali in Rome 1221
Mario Monopoli (Sapienza Università di Roma, Italy) · Andrea Scorsino (Sapienza Università di Roma, Italy)

AI and Media Literacy: Critical, Creative and Emotional Skills for Democratic Participation 1222
Alice Cardinale (University of Rome La Sapienza, Italy)

M.06. Facing AI Challenges in a Democratic and Socio-Constructivist Perspective: Imaginaries, Agency and Explorative Experiences with a Reggio Emilia-Inspired Approach 1223

Quantum Diplomacy Games As An Emerging Dimension Of The Democratization Of Science Diplomacy 1223
Yixin Zhang (Sapienza university di Roma, Italy)

AI in Early Childhood Education: Ethical Governance in the Age of Moral Artificial Agents 1224
Elena Repman (University Niccolò Cusano, Italy)

Children, Bodies and Algorithms: Democratic Explorations of Artificial Intelligence in Early Childhood 1225
Andre Peres (Instituto Federal de Educação, Ciência e Tecnologia do Rio Grande do Sul (IFRS - Campus Porto Alegre)) · Vitor Davi Pompeu de Mattos (Instituto Federal de Educação, Ciência e Tecnologia do Rio Grande do Sul (IFRS - Campus Porto Alegre)) · Fabiana Lorenzi (Invenio Educação) · Patricia Cavedini (Colégio Marista Rosário) · Nicele Cardoso Caceres Cristmann (Colégio Marista Rosário) · Chris Rogers (Tufts CEEO, Tufts University) · Milan Dahal (Tufts CEEO, Tufts University)

Integrating an AI-Based Conversational Agent in Dialogic Reading Practices: A Didactic Intervention in Primary School 1226
Chiara Magurno (Università di Modena e Reggio Emilia, Italy) · Chiara Bertolini (Università di Modena e Reggio Emilia, Italy)

Rethinking Artificial Intelligence in Education: Playful Inquiry, Aesthetic Dimension, and Democratic Participation 1227
Maria Barbara Donnici (Fondazione Reggio Children-Centro Loris Malaguzzi ETS) · Elena Sofia Paoli (Fondazione Reggio Children-Centro Loris Malaguzzi ETS) · Alessia Donini (Università di Modena e Reggio Emilia)

M.07. Learning for Democracy: Media Education and Civic Agency in Times of Disinformation 1228

How Can Universities Foster Students' Critical Thinking Skills 1228
Guillaume Cuny (Nantes Université, France)

Spectatorship, Bodies And Digital Hate: Observing Online Hate Speech And Its Implications For Media Education 1229
Enrica Sgobba (University of Bari) · Anna Fausta Scardigno (University of Bari)

From Mathematics to Citizenship: An Educational Toolkit for Critical Data Literacy 1230
Sara Vergallo (Università degli Studi di Macerata, Italy) · Alice Giglia (Fondazione G. Feltrinelli, Milano, Italy) · Leonardo Arpino (CPIA5, Milano, Italy)

Tackling Misinformation Through Education. Teachers 4.0 Digital Age as a Tool for Adult Learning and Digital Awareness 1231
Giorgia Coppola (University of Palermo, Italy, Italy) · Maria Vinciguerra (University of Palermo, Italy, Italy)

Literacies Reimagined: Reconceptualizing Critical Digital Literacy Through Art-based Postdigital Encounters 1231
Sara Pastore (Università degli Studi di Napoli Federico II, Italy) · Emiliano Grimaldi (Università degli Studi di Napoli Federico II, Italy)

Family Capital and Disinformation: Resilience Grounded on Trust and Comparative Thinking. Results from the Erasmus+ Project DRONE 1232
Alba Francesca Canta (Polytechnic of Turin, Italy) · Alvise Mattozzi (Polytechnic of Turin, Italy) · Linda Tonolli (Polytechnic of Turin, Italy) · Viktoria Konidari (Hellenic Open University)

Site of Resistance: Santarcangelo Festival Between Media Scandal, Cultural Policy and Democratic Negotiation 1233
Rita Agatina Di Leo (Sapienza University of Rome and University of Bari "Aldo Moro", Italy)

Online Information-Seeking And Voting Decisions In Swiss Direct Democracy: Evidence From A Swiss Popular Vote 1234
Andrea Plata (Scuola universitaria professionale della Svizzera italiana (SUPSI), Switzerland) · Elena Battipede (Scuola universitaria professionale della Svizzera italiana (SUPSI), Switzerland; Università della Svizzera italiana (USI), Switzerland) · Petra Mazzoni (Scuola universitaria professionale della Svizzera italiana (SUPSI), Switzerland) · Marina Pettignano (Scuola universitaria professionale della Svizzera italiana (SUPSI), Switzerland) · Luca Botturi (Scuola universitaria professionale della Svizzera italiana (SUPSI), Switzerland)

Digital Citizenship at School: A Digital Civic Education Curriculum for Upper Secondary Education 1235
Angela Daniela Sortino (Università di Palermo, Italy)

Mapping the Pedagogical Ecology of Democracy: Media, Civic Learning, and Citizen Agency 1236
Giulia Ferri (IULM University, Italy) · Elisabetta Risi (IULM University, Italy) · Andrea Miconi (IULM University, Italy)

Epistemic Capture and Democratic Education: Reclaiming the University in the Age of Algorithmic Infrastructures 1237
Raffaella Frascarelli (Sapienza University of Rome, Italy)

Tackling Disinformation and Promoting Digital Media Literacy: The Teachers 4.0 Digital Age Online Training Model for In-Service Teachers 1238
Paola Macaluso (University of Palermo, Italy)

Hate Speech as an "Ambiguous but Useful" Category: Postdigital Intercultures and Civic Agency in Platformized Societies 1239
Stefano Pasta (Catholic University of the Sacred Heart, Italy)

M.08. Media, Arts and Digital Democracy: Negotiating New Cultural Ecologies 1240

Exhibition Spaces and Museum Education: AI Support for the Creation of New Narratives with an Inclusive Approach 1240
Laura Ceccacci (Università eCampus - MIM, MUR, Italy)

Television as Citizenship: Rai and Public Service in the Digital Media Environment 1241
Martina Masullo (University of Salerno) · Matteo Marinello (University of Bologna)

Music, Platforms and Democracy: Performativity, Media Literacy and the Collective Construction of Meaning 1242
Camilla Masullo (Università degli Studi di Napoli Federico II, Italy)

'Ex Silens' ad 'sensorium'. Donnarumma and the Democratic Negotiation of Perception: Towards Art as an Epistemological and Pedagogical Environment 1243
Giovanna Landi (Università degli Studi di Salerno, Italy) · Maria Beatrice Russo (Università degli Studi di Salerno, Italy)

Authorship and Participation, Simulation and Signification: Cinema in the Algorithmic Age Between Frame, Code, and Artificial Intelligence 1244
Pietro Ammaturo (Università eCampus, Italy)

Redefining Music Listening Practices in the Platform Society 1244
Ludovica Malknecht (Università Europea di Roma) · Sara Navarro Lalanda (Università degli Studi Roma Tre)

M.09. Navigating Complexity: Game Design, Emotions, and AI for Democratic Citizenship Education 1246

COTS Board Games and AI as Emotional and Cognitive Ecosystems for Democratic Citizenship: A Teacher's Professional Development Program 1246
Carlo Andrea Pensavalle (University of Sassari, Italy) · Alberto Pintus (University of Sassari, Italy) · Emanuele Petretto (University of Sassari, Italy) · Luca Caloi (University of Sassari, Italy) · Veronica Venco (Adam Mickiewicz University, Poland) · Alan Mattiassi (Game Science Research Center, Italy) · Martina Ragusa (National Research Council of Italy (CNR), Italy) · Maria Giuliana Solinas (University of Sassari, Italy)

From Uncertainty to Agency: AI-Supported Playful Learning for Critical Technoscientific Citizenship 1248
Veronica Venco (Adam Mickiewicz University, Italy) · Luca Caloi (Università degli Studi di Sassari) · Carlo Andrea Pensavalle (Università degli Studi di Sassari)

Integrated Educational Ecosystems for Democratic Citizenship: Tabletop Role-Playing Games and Generative AI 1249
Martina Ragusa (ITD-CNR, Italy) · Davide Capobianco (University of Venice "Ca' Foscari") · Giancarlo Masi (ITD-CNR, Italy; University of Modena and Reggio Emilia, Reggio) · Flavio Manganello (ITD-CNR, Italy)

When Intention Isn't Enough. Validating a Recognition-of-Harm Game Mechanic to Address Social Complexity In Applied Game Design. 1250

Separated At School: Which Challenges for Policies? (Presentation of SD Special Issue suppl/2025)

PANEL CONVENORS: Marta Cordini (Polytechnic of Milan, Italy); Costanzo Ranci Ortigosa (Polytechnic of Milan, Italy)

PANEL KEYWORDS: school segregation, desegregation policies, educational inequalities

Over the past twenty years, the high concentration of students from socioeconomically disadvantaged households or with migrant backgrounds in Italian schools has prompted scholars to reflect on the issue of school segregation. Some studies have identified the main characteristics of this phenomenon, highlighting the need to deepen its analysis and to develop targeted policies. School segregation is not only a consequence of structural, social and territorial inequalities, but also a factor that contributes to perpetuate disadvantages. The special issue presents some of the main emerging findings and explores methodological and analytical challenges in the study of school segregation in Italy. The collected contributions examine the combined factors that contribute to school segregation, including the residential distribution of the population, institutional configurations, and households' choices. They also address the effects of school segregation on academic outcomes and opportunities for social mobility, with particular attention to the intertwined factors that influence educational trajectories (e.g., peer effects or school effect). The overall aim of the special issue is to contribute to the understanding of the phenomenon, while also laying the groundwork for reflections geared toward public policy. In this Workshop, we propose to open a discussion not only on the contents of the issue but also on the main policy challenges that this topic poses. A brief presentation of the special issue by editors and authors will be followed by a roundtable discussion with invited academics and stakeholder.

SEPARATED AT SCHOOL: WHICH CHALLENGES FOR POLICIES? (PRESENTATION OF SD SPECIAL ISSUE SUPPL/2025)

A Passion for Education Policy: The Research Journey of Luciano Benadusi

PANEL CONVENORS: Orazio Giancola (University "La Sapienza", Rome); Assunta Viteritti (University "La Sapienza", Rome)

PANEL KEYWORDS: education policy, social justice, inequalities

Chairs Orazio Giancola and Assunta Viteritti (University of Rome "La Sapienza ", Italy) Keywords education policy, social justice, inequalities, competencies Luciano Benadusi (founder of the journal Scuola Democratica), former Professor of Sociology of Education and former Dean of the Faculty of Sociology at the University of Rome “La Sapienza”, has developed a research trajectory marked by a sustained attention to the deeply political nature of education policy. Education policy is understood not as a neutral tool for managing school systems, but as a key instrument in the governance of society. Benadusi’s work has significantly contributed to showing how education policies are shaped by public choices concerning the distribution of opportunities, the definition of rights, and the construction of citizenship. From this perspective, education emerges as a central arena of social justice, where states and institutions explicitly or implicitly determine who has access to which educational and occupational pathways. A core dimension of his reflection concerns the relationship between education and inequality: school systems can either reduce or reproduce social differences, depending on the policies adopted and the structural conditions in which they operate. The link between education and work thus becomes a crucial political issue, revealing tensions between inclusion, selection, and social stratification. The seminar aims to highlight this dimension of his thought, emphasizing the political strength of his analysis: for Benadusi, studying education means interrogating the collective choices through which a society shapes its inequalities and its possibilities for transformation. The seminar is dedicated to Vittorio Campione.

This session is presented as a whole; no individual abstracts are included.

A.02

Alphabets of Peace As Transformative Devices

PANEL CONVENORS: Silvia Nanni (University of L'Aquila, Italy); Anna Paola Paiano (University of Salento, Italy)

PANEL KEYWORDS: Peace, education, nonviolence

Contemporary wars, humanitarian crises’ proliferation, and the growing fragility of democratic systems require a profound reconsideration of education as a cognitive, ethical, and political device. The complexity of current conflicts – in which geopolitical, cultural, economic, psychological, and environmental dimensions intersect – demands a distinctly interdisciplinary and decolonial approach, integrating contributions from critical and emergency pedagogy, peace studies, sociology, the psychology of collective trauma, international human rights law, digital media studies, the anthropology of conflict, and political science. Drawing on epistemologies of positive peace and the nonviolent transformation of conflicts, as well as on structural interpretations of violence proposed by international literature on peace education, the panel aims to examine the transformative processes that emerge in contexts of war and in societies shaped by political instability and systemic inequalities. The authors are therefore invited to present contributions aimed at analyzing: • learning in conflict zones, emergency schools, and diasporic contexts; • interrelations between mediation, agency, community empowerment, and psycho-social resilience; • the effects of propaganda tools, disinformation, and discursive devices on the construction of imaginaries and narratives of violence; • the role of education in cognitive and symbolic disarmament, in peace-building processes, and in safeguarding human dignity; • the potential of educational institutions as spaces of reconciliation, healing, peace-making and the construction of global citizenship. The panel seeks to advance, through research experiences and good praxis, theoretical and methodological reflections on education’s capacity to counter violence in all its forms, generate critical awareness, and support lasting peace-building processes in societies deeply marked by conflict.

THE OTHER'S HISTORY. PEDAGOGICAL REFLECTIONS ABOUT SHOAH AND NAKBA MEMORIES

Alessandro Vaccarelli (Università degli Studi dell'Aquila, Italy) · **Lorenzo Zaffram** (Università Sapienza di Roma, Italy)

Shoah and Nakba | Pedagogy of memory | Peace Education

The volume The Other's History: Israelis and Palestinians (PRIME, 2003) was published in Italy in 2003. It is a "small history manual" (ibid., 2003, p. 3) written by a group of twelve teachers, both Israeli and Palestinian. There are two versions of it: one in Arabic and one in Hebrew. The groups of students to whom the manual was addressed were presented with the history of the conflict both from the Palestinian point of view and from the Israeli point of view. The original manual featured both narratives on the same page, separated by a blank space: "so as to allow teachers and pupils to write their own observations" (ibid., 2003, p. 10). The Israeli–Palestinian conflict is characterized not only by extreme forms of violence and situations involving violations of human rights, but also by a conflict of memories, narratives, and imaginaries. Given the stratification of events as well as of memories, Daniel Bar-Tal (2024) places it within the framework of "intractable conflicts," which have specific characteristics and are marked, on both sides, by the perception that resolution is impossible. Despite its complexity and the many difficulties involved, Bashir and Goldberg (2023) emphasize the need to bring the memories of the Holocaust and the Nakba into dialogue in order to write "a new grammar and a new syntax" for the development of national narratives that are more complex, yet also more aware and effective. The Holocaust and the Nakba are defined by the authors as "foundational pasts," borrowing the concept from Alon Confino (2012). They are considered as such because both memories assume an ontological dimension within Israeli and Palestinian societies respectively, and each presupposes the negation of the other's trauma, thereby preventing forms of recognition and dialogue. The attempt to create a continuum between these two memories does not in any way aim to equate different events or to foster a competition of victimhood, as Said had previously argued (2011). Rather, through this project the authors seek to open up the possibility of mutual recognition in order to contribute to the construction of peace-building processes. The lesson of Bashir and Goldberg (2023) aligns with Todorov's (2018) concept of "exemplary memory," which presupposes the possibility of considering memory not only in a "literal" sense (narrowly tied to facts and contexts) but also as a tool for interpreting the present and contemporary forms of violence and conflict. Within these reflections lies the pedagogy of memory (Tomarchio & D'Aprile, 2021; Vaccarelli, 2023; Bravi, 2023; Vaccarelli, 2025), which conceives memory not merely as a commemorative moment but above all as a pedagogical device capable of becoming a driver of active citizenship, democracy, and processes of peace-building.

THIRD NARRATIVE, JOINT GRIEF, AND SHARED FUTURE: SYMBOLIC DISARMAMENT IN ISRAEL–PALESTINE

Ilaria Olimpico (University La Sapienza, Rome, Italy)

third narrative | symbolic disarmament | memory

This contribution pushes the boundaries of education beyond institutional settings toward grassroots commemorative practices. It explores the emergence of a "third narrative" in the Israel–Palestine context, in its role of "cognitive and symbolic disarmament, peace-building processes, and the safeguarding of human dignity" (Panel A.02: Alphabets of Peace as Transformative Devices). Drawing on the Joint Memorial Ceremony organized by Combatants for Peace and the

Parents Circle–Families Forum (Combatants for Peace, n.d.), as well as on the personal journey of Sulaiman Khatib (Eilberg-Schwartz & Khatib, 2021), the paper analyzes how a third narrative, can be a transformative symbolic space that challenges binary oppositions and reorients memory toward a shared future (Assman, 2011; Bashir, & Goldberg, 2023; Vaccarelli, 2025). The Ceremony disrupts the victimhood paradigm and the weaponization of memory (Klein, 2024). Particular attention is given to power asymmetry as an ethical condition shaping the possibility of articulating this third narrative.

PACIFISM AND NONVIOLENCE: LIMITS, APORIAS, AND POLITICAL CONTROL

Michele Longo (Università degli Studi di Napoli (Federico II), Italy)

Peace | Ideology | Control

This paper offers a critical analysis of pacifism and nonviolence as ideologies that can define legitimate forms of political action and set the acceptable limits of conflict. By shaping what is deemed thinkable and practicable, these ideologies can narrow repertoires of contention and, in doing so, contribute to the reproduction of domination. The argument is developed in two parts. First, a dialogue is established among Giovanni Cosi (1985), Günther Anders (1991 [1984]; 2008 [1979; 1987]), Lev Trotsky (2000 [1917]), and Frantz Fanon (2007 [1961]) to expose the aporias of pacifism and nonviolence as principles and to trace their links to dominant interests. Cosi highlights the contradiction of radical pacifism when self-defense is denied. Anders stresses the limits of benevolent action and admits counter-violence as self-defense. Trotsky reads pacifism as rhetoric that manufactures consent and legitimizes imperialism. Fanon treats nonviolence as a colonial dispositive that disciplines revolt and makes decolonization compatible with new domination. Second, in the case of the U.S. civil rights movement (Churchill, 1998; Gelderloos, 2015 [2005]), it is shown how nonviolent rhetoric can align with white ideology and how, once institutionalized, it can govern conflict from within. Three functions recur: contention is confined to orderly forms; internal control is enabled through respectability, moral surveillance, and censorship; deviance is regulated (De Giorgio, 2013) by drawing a moral boundary between legitimate and illegitimate protest. Following Berger and Luckmann, nonviolence is treated as a partial symbolic universe anchored to a core universe of values and interests: tolerance integrates compatible universes, while incompatible ones are turned into objects of "therapy" or "annihilation" (Berger and Luckmann, 1969 [1966], p. 173). This helps explain how pacifist repertoires can be incorporated through adjustment and adaptation, neutralizing conflictual force while leaving the dominant universe intact. This critique is not an endorsement of violence; analytical vigilance is called for, in line with Quirico and Ragona's Panzierian perspective (2018: 36): «the necessity of perceiving the adversary and discerning whether these struggles reveal the objective, characteristic features of capital».

PEACE EDUCATION AND UNACCOMPANIED CHILDREN WITH MIGRATORY BACKGROUNDS IN ITALY

Filippo Iapadre (Università La Sapienza di Roma, Italy)

Peace education | Unaccompanied children | Agency

The aim of this ongoing research is to explore dialogical spaces for peace education —both formal and non-formal— within all the institutional reception and integration centers for unaccompanied children with migratory backgrounds in a medium-sized city in Northern Italy with a long history of migration flows, which intensified in 2023 and slowed down over the past two years. Bringing social systems theory (Lumhann, 1990, 2002), critical pedagogy (Freire, 2014; Pirozzi & Rossi-Doria, 2011) and educational peace studies (Kester, 2008; Herrero Rico, 2018; Gürsel-Bilgin, 2020; Wyness, 2013) into a productive dialogue, I investigate how educational interactional communication systems are produced in the daily lives of unaccompanied children, stressing systems' potential for change and expansion through horizontal dialogical activities. I conducted 30 semi-structured interviews with child educators, Italian teachers, linguistic and cultural mediators, and individuals holding political and administrative roles, as well as 12 co-designed dialogical activities between three different groups of eigth childrens and young adults (one group for each housing center). In these interactions, I used facilitation (Baraldi & Farini, 2013; Kovalainen & Kumpulainen, 2007) as a tool to empower children's peacful agency, enhance their epistemic authority, and build community across social differences. To create a dialogic interaction as horizontal as possible, I avoided proposing structured laboraties, games, or predifined activity, entering each space without imposing rules or normative expectations about a "right way" to partecipate (and, by contrast, a "wrong" or "deviant" one). As facilitation suggests, rules that could determine clear turn-of-talk, or demand attention to the partecipant's story, were co-constructed in the dialogic system by the partecipants from themselves and peacfully enforced by them only when they feelt it necessary. When conflict of opinion arose, facilitation helped me to mediate them —not manage, nor resolve them—, exploring differences and supporting the co-construction of shared narrations. Drawing from a non-essentialist view of culture, I searched for hybrid cultural-trajectories (Holliday, 2022; Baraldi, 2024) and immaginary of untested feasibility (Freire, 2014) coconstructed by the partecipants as they narrated their past, their present lives and the hopes they have for the future. The final encounter in each group focused on supporting them in developing proposals to improving their lives within the community, facilitating their agency in a peace-building effort that conceptualizes everyday peace as dialogically co-created, contextual, sustainible, responsibility-oriented and conflict-transformative. The interviews were analyzed through narrative and thematic software-assisted analysis. The analysis of the video-recorded activities was also supported by conversational analysis (CA) techniques. CA allowed me to carefully observe how facilitation could (or sometimes failed to) enhance turn-taking processes and children's epistemic authority (Baraldi 2022), fostering more responsible, free, and fluid communication in which mainstream metanarratives can be subverted and deconstructed, and small cultures and possible communities are co-constructed (Amadasi & Holliday, 2018; Tramma, 2019). Finally, once everything will be analized, this research intends to share its result with the community of educators, producing guide-lines that could help them to create stable dialogic spaces in their housing centers, as a parallel and integrative educational tool of peace-building.

REINVENTING LANGUAGE AS A TOOL OF NONVIOLENT PRACTICE IN VARIOUS EDUCATIONAL SETTINGS

Paola Rigoni (Università di Bologna, Italy) · **Carmel Berendi** (University of Pecs, Hungary)

nonviolence | education | dialogical practices

A subtle form of violence is increasingly shaping contemporary communication. While not always expressed as explicit aggression, it influences how individuals think, speak, and relate to others. In the platform society, social, economic, and interpersonal exchanges increasingly occur through online platforms operated by a small number of private corporations, which have become central infrastructures of everyday life (van Dijck, 2024). Since the early 2000s, economic, cultural, and political power has concentrated in the hands of a few companies that structure the main spaces of online sociality and information (Törnberg, 2023), such as Google, Amazon, Facebook, Apple, and Microsoft, which play a decisive role in shaping communication and participation in public life (Rikap, 2024). The growing presence of algorithms in social media raises questions about their influence on attention, perception, and thought. As digital infrastructures shape what we see, read, and discuss, they also influence the language through which we interpret the world (Brady et al., 2023). Public discourse in digital environments is increasingly characterized by aggression, simplification, and polarization, and these communicative patterns are gradually permeating educational contexts. University students often adopt communicative styles influenced by social media, including in interactions with instructors (Persano, 2026). This reflects a broader linguistic transformation in which the boundaries between formal and informal communication are becoming increasingly blurred (Rodgers, 2025), contributing to the normalization of more direct and sometimes confrontational forms of expression in academic settings (Caceres et al., 2025). Language structures how reality can be represented. As Wittgenstein argues, the limits of my language mean the limits of my world (Wittgenstein, 1921). What cannot be meaningfully expressed in language cannot be clearly thought or communicated. The scope of what we can speak about defines the scope of the world we are able to understand. Words can function as doors that open dialogue, or as walls that close it (Rosenberg, 2003). Unlearning destructive patterns embedded in everyday conversation can improve forms of expression and foster connection and cooperation. For this reason language should be rediscovered as a tool for nonviolence. Versatile communication skills allows individuals to articulate nuance, recognize differences and sustain dialogue, building bridges that resist simplification and hostility. Within this framework, the purpose of this contribution is to examine the role of nonviolent communication as a subject of instruction and to highlight its relevance within formal and non-formal education. In particular, the paper explores how nonviolent communication can be integrated into educational practices as a pedagogical approach capable of fostering dialogue, empathy, and critical reflection.. The authors - educators in adult and higher education- advocate for a renewed attention to nonviolence within educational environments. Drawing on their teaching experiences, they reflect on the pedagogical potential of nonviolent practices applied in educational contexts. The contribution argues that incorporating nonviolent communication and dialogical practices into educational settings highly support constructive forms of interaction, strengthen democratic values and promote a sense of responsibility necessary for cultivating a sustainable culture of peace.

The Global Right and Education: Hegemony, Social Justice, and the Post-Liberal Turn

PANEL CONVENORS: Manuela Mendoza (Universidad de O'Higgins, Chile); Aina Tarabini (Universitat Autònoma de Barcelona, España); Analía Meo (Consejo Nacional de Investigaciones Científicas y Técnicas (Conicet), Argentina); Marie Verhoeven (Université Catholique de Louvain, Belgique); Luca Massidda (University of Tuscia, Italy); Mattia Diletti (Sapienza University of Rome, Italy)

PANEL KEYWORDS: Critical Pedagogies, Neoliberal and Neoconservative Education Reforms, New Right

This panel examines how the rise of the New Right is reshaping education and disputing its historical role in sustaining democracy and social justice. Across diverse national contexts, contemporary right-wing movements do not merely revive traditional conservatism: they strategically combine neoliberal market logics, identity-based neoconservatism, authoritarian populism, and technocratic management. What is "new" in these assemblages is their capacity to intertwine economic, moral, and cultural registers in projects aimed at restoring order and redefining the public meaning of education (Apple, 2001; Gandin & Lima, 2016). Education thus becomes a key battleground where claims of meritocracy, "freedom of choice" and inclusion are mobilised alongside demands for ideological neutrality, anti-gender discourses and cultural control. These agendas work simultaneously at multiple levels —curriculum design, teacher training, school governance, and regulatory frameworks— producing tensions that erode inclusive democratic spaces and constrain critical pedagogies. Recent work shows how this convergence of neoliberal and traditionalist rationalities fuels educational reforms that normalise market values while policing moral boundaries (e.g., Giudici et al., 2025). This panel welcomes theoretical, historical, and empirical contributions that interrogate how New Right actors mobilise policies, narratives, and institutional reforms to reconfigure education as a domain of political struggle. We especially encourage works that examine democratic erosion, moral regulation, and the disciplining of diversity within schools, as well as research exploring countermovements, resistant pedagogies, and collective practices that reclaim education as a space for democracy, ethical responsibility, and social justice.

HIGHER EDUCATION PRIORITIES ENGINEERED BY THE TRUMP-MUSK PHASE OF THE SECOND TRUMP ADMINISTRATION

Iryna Kushnir (Nottigham Trent University, United Kingdom) · **Sujith Kumar** (King's College London, United Kingdom)

Higher education | Trump | policy documents

This paper examines higher education (HE) priorities advanced in the opening months of the second Trump administration, a period shaped by the prominent role of Elon Musk as a Special Government Employee and the emergence of the "Department of Government Efficiency" (DOGE). Building on the premise that HE is always political rather than insulated from ideological struggle (Marshall & Scribner, 1991; Apple, 2003), the study mobilises world-systems theory to situate US HE policy shifts within world core–periphery dynamics and struggles over hegemony (Wallerstein, 1974; Spring, 2015). Methodologically, the study undertakes a thematic analysis of 16 national-level presidential policy documents (13 executive orders and 3 proclamations) issued between 20 January and 28 May 2025, collected from the Federal Register (2025) via structured keyword searches and analysed in NVivo 12 using a four-phase thematic analysis framework (Kushnir, 2025b). The analysis identifies three interconnected priorities. First, the restoration of "traditional values" is operationalised through executive actions that frame diversity, equity, inclusion and accessibility (DEIA) initiatives as illegitimate, bureaucratic, and discriminatory, and that recast "merit" and "biological truth" as neutral foundations for public policy. This agenda is paired with efforts to reduce federal oversight – up to and including proposals to abolish the Department of Education – while simultaneously conditioning federal support on ideological compliance. Second, the

defence of "religious freedom" positions Christians as targets of institutional hostility and links moral authority to policy interventions spanning campus life, public health mandates, and "gender ideology". Measures framed as combating anti-semitism further expand punitive oversight of universities and student protest, fusing religious liberty claims with national security and disciplinary governance. Third, "accountability" is reframed from a quality assurance and public responsibility mechanism into an instrument of surveillance and control: accreditation reform is used to delegitimise equity-oriented standards, weaken monitoring of outcomes, and enable institutions to exit "antithetical" accreditors, while foreign-funding disclosure requirements represent international collaboration as a security risk. The paper argues that these priorities – emerging alongside visible disruptions to educational research capacity (e.g., major cuts to the Institute of Education Sciences) and to academic mobility (e.g., intensified visa constraints and threats to international enrolment) – signal a strategic "purification" of the HE sector as a nationalist project rather than administrative neutral reform (Binkley & Toness, 2025; Feng, 2025). Yet, interpreted through world-systems theory, the early trajectory suggests recalibration rather than structural transformation: while the turmoil may open short-term opportunities for semi-peripheral systems to attract talent, entrenched infrastructures of US academic dominance and the political economy of international student flows remain resilient (Bound et al., 2021; Chase-Dunn et al., 2019). This study's significance is in explaining how early second-term federal actions have reshaped US HE and what that means for universities in and beyond the US trying to protect academic freedom, equity work, and international collaboration.

STUDENT POLITICS IN THE UK MEDIA: WHOSE VOICES ARE HEARD, AND WHOSE ARE LEFT OUT?

Franziska Lessky (University of Oxford, United Kingdom) · **Xuedan Yan** (University of Oxford, United Kingdom) · **Rachel Brooks** (University of Oxford, United Kingdom) · **Tom Fryer** (University of Manchester, United Kingdom) · **Rille Raaper** (Durham University, United Kingdom)

Student politics · media analysis · social justice

From "woke campuses" to an alleged free-speech crisis, UK universities are increasingly framed as politically charged spaces (Fryer, 2023; Loader, 2015; Raaper, 2024). Yet empirical research remains limited on whether higher education actually politicises today's students, even as media attention to this issue has intensified (Scott, 2022; Simon, 2022). In this talk, we will explore the following questions: how does the UK press portray student politics, what evidence do these articles rely on, and whose voices are heard and whose might be missing? We will draw on a systematic media analysis of UK national newspapers (September 2020–September 2025), in which we used Lexis+ UK and a targeted keyword strategy to build a final dataset of 89 articles. Two findings will be discussed in detail: First, widespread claims that universities strongly shape students' political views, particularly by promoting left-wing or "woke" ideologies, are rarely supported by robust empirical evidence. Second, more than half of all coverage focuses on Oxford and Cambridge, with incidents at these elite institutions frequently treated as representative of the higher education sector as a whole. We will discuss why this matters and what is obscured when "the student" is imagined through Oxbridge alone. The proposed talk

points to a highly relevant and pressing societal issue of today's educational and political landscape in many European countries and beyond. It aims to contribute to the panel discussion by reflecting on how education is mobilised within broader anti-democratic and reactionary discourses (Bennett et al., 2017).

UNDOING DEMOCRACY IN EDUCATION IN ONTARIO, CANADA: FROM POLICY TO GOVERNANCE

Sue Winton (York University, Canada)

policy advocacy | New Right | critical policy analysis

This paper shows how a policy designed to enhance democracy in Canada's largest school district was challenged - and ultimately undone - by New Right actors at the local and provincial levels in Ontario, Canada. The paper presents findings from a critical policy study (Molla, 2021) of debates over a policy change made by elected members (i.e., trustees) of the Toronto District School Board (TDSB), a change designed to enhance equity by increasing access to specialized programs for historically marginalized students. The study was grounded in theories of network governance (Ball, 2009), argumentative discourse (Hajer, 2006), and critical democracy (Solomon & Portelli, 2001). Data include: transcripts from TDSB meetings; TDSB policy texts; elected officials' social media posts; Ontario government texts; and news reports. Argumentative discourse analysis (Hajer, 2006) was used to identify arguments made by actors for and against the policy change. As discussed below, New Right members of the coalition advocating a return to 'merit-based' competition for admission prevailed due to the provincial government's takeover of the democratically elected school board. Findings: In 2022, the TDSB changed its policy on how students would be admitted to its specialized (e.g., Arts, STEM) programs. The board's data showed some groups were overrepresented in these programs while others were underrepresented. The imbalances were attributed in part to admissions processes involving assessments of ability that advantaged affluent students. The policy change removed these mechanisms and enabled anyone with an interest in the programs to apply. It also prioritized admission to students from historically underrepresented groups. A school board election was held shortly after the policy change was introduced, with some new trustees vowing to restore the previous admissions policy. In calling for a return to "merit-based" admissions, these and other opponents argued the new policy undermined "excellence" and hurt hard-working, talented students. They also questioned the legitimacy of consultations held before the change. Opponents spoke at board meeting as individual citizens and trustees, but some were also affiliated with local neoconservative organizations and/or liaised with members of Ontario's New Right government led by Doug Ford, a neoliberal populist (Budd 2020). Ford's government has introduced multiple policies that undermine democratic education in name of the "choice" and "merit" since 2018 (Di Giovanni & Parker, 2024; Satia & Dej, 2026). In Spring 2024, Ontario's Minister of Education (a member of Ford's government) intervened in the local debate, instructing trustees to review the policy change and launch a policy consultation. Calling for a new consultation on TDSB's admissions policy positioned the Minister of Education as an advocate for democracy while he actively undermined it. The TDSB planned to launch public consultations in Summer 2025. However, before it could the Ford government took over the democratically elected school board and appointed a supervisor. A TDSB trustee and new admissions policy opponent praised the takeover. One of the supervisor's first moves was to re-instate competitive admissions to the TDSB's specialized programs. Ontario's Minister of Education praised the return to "a fair admissions process…based on merit" (Calandra, 2025).

POPULAR EDUCATION AGAINST THE NEW RIGHT: GRASSROOTS EXPERIENCES AND DEMOCRATIC STRUGGLES IN POST-AUTHORITARIAN CHILE

Diego Cabezas Bravo (Universidad Metropolitana de Ciencias de la Educación, Chile)

New Right educational project | Popular education | Pedagogical resistance and democracy

In recent years, the Chilean educational system has suffered massive reforms and policies implementations. Ley de Inclusión, Desmunicipalización, LEGE, among others, have sought to transform the system towards an idea of democratization and participation; however, their implementation has been inadequate. After more than thirty years of apparent left-wing leaning transformation attempts, the educational landscape has not changed in its structure, but strong discourses of merit, authority, and freedom of education have re-emerged to undermine all of them (Arzola, 2024; Cubillos et al., 2021). This mix is a crucial site for understanding how new right-wing assemblages are reconfiguring the very meaning of democracy, social justice and education, not only in Chile, but across the entire hemisphere. Against a backdrop of neoliberal modernization and moral conservatism, contemporary right-wing actors in Chile mobilize a discourse working towards the dismantling of public education, the moral panic around gender and diversity, and the managerial language of "quality assurance" (Reyes & Cabaluz, 2025), creating an ideal public terrain where social justice is reframed as ideological threat rather than democratic horizon. This presentation in particular examines these dynamics through the lens of popular education, revisiting their emancipatory contributions to Chile's democratic struggles, from the resistance to the Pinochet dictatorship to the 2019 social uprising. Using documentary analysis, interviews with educators, and institutional discourse review, we explore how the educational policies, far from their left-wing appearance, articulate neoliberal and neoconservative rationalities, disciplining dissent while promoting an illusion of participation. These "post-political" configurations (Apple, 2013) coexist with renewed attempts by grassroots educational experiences, popular education spaces, to restore a sense of collective agency and public purpose in education (Fernández, Acuña & Albornoz, 2024; Ojeda et al., 2024; Cabezas, 2023). By tracing this authoritarian technocracy advancement, we argue that the New Right's project in education is not a return to tradition but actually a reconfiguration of pedagogical-political power, one that combines managerial depoliticization with moral regulation. Yet, within this context of reaction and control, popular education persists, unseen and unrevisited by the academic world, as a counter-hegemonic force that produces spaces of hope and radical dialogue (Freire, 1970). The Chilean case thus reveals both the dangers of democratic erosion and the vitality of pedagogical resistance, offering insight into how, from popular education, we can reimagine democracy from below amid global authoritarian currents. Ultimately, we conclude that defending democracy in education today demands both resisting right-wing policies and, at the same time, reaffirming education as a collective ethical praxis, a terrain where solidarity and critical consciousness can still transform the social order. From popular education, we can envision pedagogical practices that do not simply defend democracy but actively reinvent it in times of crisis.

THE SOCIAL AND ECONOMIC CONDITIONS FOR DEMOCRATIC EDUCATION

Hugh Lauder (University of Bath, UK, United Kingdom)

The New Right | Participant Democracy | Democratic Education

While there has been debate about the nature of democratic education and its effectiveness, there has been less discussion of the social and economic conditions which enable such an education. Given the ascent of the New Right in many countries this has become a vital question. Democratic education refers to an education for democratic citizenship and a system of education which is democratic. Dewey noted that 'education is the midwife to democracy', yet the current state of polarized societies vitiates this view. This suggests that we need to consider the conditions under which a democratic education is possible. The failure of Liberal democracies, hollowed out by Neo Liberal policies, has created an epistemic deficit that has enabled what Arendt called the 'big lies' associated with totalitarian regimes. To establish the failure of an education for democratic citizenship under Liberal democracies, evidence is drawn from the historical example of Germany during the democratic period of the Weimar Republic and subsequent Nazi dominance and from contemporary research on the Global Citizenship programme in the International Baccalaureate, where many students view it as a way of elevating their CVs as Neo-Liberal subjects (Hayden et al, 2020). In education, the consequence of this democratic failure has been what Balarin and Rodriguez (2024) have called 'shallow pedagogies'. This suggests that a democratic education will only be effective in a society based on participatory democracy in which citizens engage in the informal education of decision-making according to our best theories and evidence. That said, without considering the economic conditions that have given rise to the New Right, such a proposal would be Idealist. This suggests that both participatory democracy and democratic education need to be seen as part of a broader progressive programme which addresses the fundamental contradictions within capitalism.

NEW RIGHT NARRATIVES ON TEACHERS' ROLE IN EDUCATION IN ARGENTINA: SYMBOLIC CONVERGENCES, NEGOTIATIONS AND TENSIONS IN SECONDARY EDUCATION POLICIES

Juana Sorondo (Universitat Autònoma de Barcelona, Spain) · **Silvia Alucin** (Instituto de Ciencias de la Educación de Rosario, Argentina; CONICET, Argentina)

New Right narratives | teacher identity | secondary education

This contribution examines the narratives on the role of secondary school teachers shaped by educational policies in Argentina, currently governed by far-right president Javier Milei. We focus here on two jurisdictions, the Autonomous City of Buenos Aires (CABA, in Spanish) and Santa Fe, whose current right-wing governments crystallize the New Right national governmental framework. Thus, their educational policies show the globally on-going convergence and negotiation between far-right, neoliberal and traditional rationalities (Bonnet, 2024; Guidici et al., 2025). Our research follows an anthropology of public policies approach, which allows us to interpret the discursive morality and normativity produced by educational policies, and their relation to social conflicts and structures (Shore y Wright, 1997; Shore, 2010). We have gathered a diverse corpus, which reflects the discursive universe of educational policies for secondary education in Santa Fe and CABA. Following a multi-scaled and comparative approach, we included: laws and legal documents, government orientations addressed to teachers, official reports and press statements, and documents issued by teachers' unions. The analysis shows how, within the context of a broader global narrative constructing a "crisis" of public education (Pini and

Amaré 2025), teachers are simultaneously manufactured as the main agent and, at the same time, the enemy of educational change. On the one hand, public policy for secondary education focuses on technocratic management via the transformation of individual teaching practices, set as a key element of flexibilisation, innovation and modernisation. Thus, neoliberal rationality shapes a narrative that overestimates individual agency, holding teachers responsible for change and neglecting the material and structural conditions of education (Meo et al., 2023; Sorondo and Alucin, in press). This rationality seems to find a fertile ground in the historical moralisation of teacher identity, as laic apostles of civilisation (Ascolani, 1999). On the other hand, in convergence with conservative morality, this discourse also deploys antagonising and suspicion-based strategies in the reshaping of secondary education teachers' identities (Normand, 2024). Disciplinary and accountability policies regarding attendance and working conditions aim to build a common image of teachers as "lazy", "unengaged" and "anti-innovation". Reinvigorating narratives from past dictatorships, political and unionised engagements are also demonised, as so-called "anti-adoctrination" policies, based on discipline- and punish-mechanisms (Larrondo, 2025), are being promoted at a national and local scale. Our comparative analysis shows that, while CABA's well rooted neoliberal educational framework smoothly transitions towards a more authoritarian moralising approach, Santa Fe's turn from social-educational policies towards a more individualised and fragmented perspective speaks of an inconspicuous and often concealed continuity between progressive-neoliberal and (far-)right policies. Despite the different contexts, both Santa Fe and CABA's educational policies partake in reshaping teachers' identity towards the desintegration of collective approaches to education (Gluz y Kesler, 2024). Exploring these cases allows us to delve deeper in the configuration of the New Right narrative in education, showing that, rather than an entirely new discourse, it emerges from an heterogenous articulation between neoliberal normative logic and authoritarian and repressive strategies (Dardot et al., 2021), as well as historically sedimented rationalities in the educational field.

EDUCATION AS A CULTURE WAR ARENA: THE CONSERVATIVE ASSAULT ON KNOWLEDGE INSTITUTIONS IN THE TRUMP ERA

Mattia Diletti (Sapienza University of Rome) · **Alice Fischetti** (Università della Tuscia, Italy) · **Luca Massidda** (Università della Tuscia, Italy)

Conservatism | Educational Policies | Culture Wars

In contemporary American conservatism, education has moved from a secondary policy domain to a strategic terrain of ideological struggle. Within the political constellation associated with Donald Trump and the broader MAGA movement (Field 2025), schools and universities are increasingly portrayed as key sites of cultural conflict and ideological reproduction (Apple 2006; Hartman 2015). Educational institutions are framed as environments captured by progressive elites, bureaucratic structures, and intellectual agendas perceived as hostile to the values of the national community. This

paper examines how education has been repositioned at the center of the contemporary conservative ideological project. The analysis focuses primarily on Mandate for Leadership 2025 (Heritage Foundation, 2023), the policy blueprint designed to guide a new conservative governing cycle, and situates it within a longitudinal comparison with Mandate for Leadership II (1984), which accompanied the consolidation of Reagan-era conservatism. The comparison reveals a significant transformation in the ideological architecture of American conservatism. In the Reagan-era Mandate, education occupied a relatively marginal position within an agenda overwhelmingly structured around political economy and institutional reform. In the contemporary document, by contrast, education emerges as a strategic field through which broader cultural and political conflicts are articulated. Schools and universities are increasingly represented as institutional spaces that must be reclaimed, restructured, and rebuilt on new normative foundations. Our interest is not to assess these policy proposals from a normative perspective but to analyze the ideological and discursive reconfiguration that underpins them. By combining the comparative analysis of the two Heritage Mandates with an examination of the educational policies and executive initiatives aligned with the Trump political project, the paper shows how the cultural centrality attributed to education has translated into a coherent strategy of governance. Within this framework, education functions simultaneously as a battlefield of the American culture wars and as a strategic lever through which contemporary conservatism seeks to construct an alternative cultural hegemony challenging the liberal-progressive paradigm and contributing to the emergence of a post-liberal political order.

DELEGATING EDUCATIONAL JUSTICE? NEOLIBERAL GOVERNANCE AND THE TRANSFORMATION OF INEQUALITY POLICIES

Cintia Indarramendi (université paris 8, France)

Educational inequalities | Neoliberal education policies | Public–private partnerships

The neoliberal turn in educational policies in France has progressed more discreetly than in other so-called “Northern” countries, yet it has advanced steadily since the 1980s. Four decades after the emergence of new public management reforms (Maroy, 2006), decentralisation, results-based governance and increasing competition between public and private actors in education, the consequences of these transformations for reducing social and educational inequalities remain a key issue for research and public debate. A growing body of sociological literature suggests that contemporary educational policies tend less to focus on reducing structural inequalities and achievement gaps than on enabling each student to perform as well as possible within a meritocratic framework (Rochex, 2020; Frandji & Rochex, 2011). Such policies are often embedded in individualising and naturalising interpretations of educational success and failure, which risk reinforcing inequalities by shifting attention away from the social conditions shaping access to knowledge and learning. In this perspective, the emphasis on personal responsibility, competences and adaptability may contribute to redefining the role of public education and the aims of compensatory policies. This paper analyses these transformations through the case of the Cités éducatives programme. Introduced in France in 2019, this national policy label targets disadvantaged urban areas identified within urban policy frameworks. Its main objective is to strengthen coordination among existing initiatives and stakeholders in priority neighbourhoods and schools within priority education schemes, with the goal of fostering “educational success” among children and young people. Drawing on an empirical investigation conducted in one local Cité éducative, the study examines processes of policy design, governance and implementation at the territorial level. It assesses the extent to which this configuration contributes to reducing inequalities in access to knowledge and learning. Findings show that Cités éducatives create spaces for the multiplication of educational actors locally, including the growing involvement and legitimisation of non-profit organisations in addressing students’ learning difficulties. These actors intervene both in disadvantaged schools and during formal schooling time, reshaping the boundaries of educational action. The research also highlights that some interventions rely on naturalising and pathologising interpretations of school inequalities, which tend to minimise the centrality of knowledge transmission and

pedagogical conditions of learning. By focusing on individual deficits or socio-emotional competences, such approaches may paradoxically reinforce the inequalities they aim to reduce. More broadly, the paper argues that these developments are embedded in a neoliberal configuration of public action characterised by the partial delegation of educational responsibilities to the non-profit private sector (Massei, 2024) and governance arrangements encouraging competition and partnerships between public and private actors. Analysing Cités éducatives thus sheds light on the reconfiguration of educational policies and on tensions between social justice objectives and managerial logics in contemporary education systems.

EMOTIONAL SCHOOL REGIMES IN NEOLIBERAL TIMES: CONCEPTIONS, PRACTICES AND RESISTANCES OVER STUDENT WELLBEING AT MADRID'S PUBLIC SECONDARY EDUCATION

Veda Krüger Ruiz (Universitat Autònoma de Barcelona, Spain)

student wellbeing | emotional regimes | affective inequality

Student wellbeing became a major concern during the 2020 pandemic. Increasing evidence of illbeing (anxiety, school disengagement, self-harm, etc.), particularly among adolescents, generated urgency in public discourse. International actors developed policies to promote wellbeing in education, concerned with its consequences on learning and academic success. This could have been an opportunity to bring together different epistemologies on emotion and wellbeing at school, from a more critical and less western-centric perspective (Jiang, Saito, Zhang & Waterhouse, 2024). Instead, a conception of individual wellbeing and socio-emotional intelligence, that does not equally contemplate its structural dimensions (Fernández, 2018), became standardized in education. This has particular implications for school systems governed by right-wing and neoliberal administrations, as in Madrid, Spain. Decades of privatization, marketization and school segregation under an "individual freedom" brand, mark the public education landscape of this European region. National reforms in 2020–2021 incorporated new measures, including the creation of a wellbeing coordinator role within schools and the implementation of large-scale teacher training on mental health. Examining how these institutional policies and conceptions of student wellbeing are enacted and/or resisted within schools reveals differences in institutional habitus, with contextualized dispositions towards attending to student emotions (Reay, 2015). Based on semi-structured interviews with 60 school leaders, counsellors and teachers from five public secondary schools in Madrid, this paper provides discursive and thematic analysis to understand conceptions, practices and emotional norms, or regimes, around student wellbeing. It aims to answer how, why and under what conditions student wellbeing is conceptualized and addressed by public secondary education under this international "wellbeing turn". Selected schools have diverse student compositions in terms of socioeconomic and migrant background, hence the study also explores structural inequalities that intersect with schools' approaches towards student wellbeing. Critical theories in the sociology of affect and emotion allow us to identify emotional registers, norms and doxa at school (Threadgold, 2020; Ahmed, 2004). These elements are socially constructed and reproduced through discourses and practices, legitimizing some emotional registers while excluding or disciplining others (Abramowski, 2024). These dynamics constitute particular emotional "regimes" that are part of a school's institutional habitus (Ibid; Reay, 2004). Understanding how schools conceptualize emotions and wellbeing, and how these approaches are enacted by adults at school, has important implications for different students, especially those belonging to working-class, migrant and/or ethnic minorities (Reay, 2025). Consequently, the present study shows that emotional school regimes affect not only how student wellbeing is addressed, but also whose wellbeing and emotional worlds are legitimized, identifying inherent affective inequalities (Nobile & Tarabini, 2025; Lynch & Baker,

2005). This paper brings forward implications for policymaking and school practice in a neoliberal education scenario, where student wellbeing is mainly understood as an individual responsibility to be regulated through emotional management, as a marketable capability (Lynch, Baker, Cantillon & Walsh, 2009), while undermining its structural roots (racism, poverty, gender inequality, etc.). This work also aims to contribute to a growing body of critical research on emotion and wellbeing at school, centering urgent questions of emotional/affective inequality in education.

Education, Democracy and Resistance in Occupied Palestine

PANEL CONVENORS: Elena Pacetti (Alma Mater Studiorum University of Bologna, Italy); Arianna Taddei (Università degli Studi della Repubblica di San Marino); Buad Khales (Al-Quds University)

PANEL KEYWORDS: education, empowerment, inclusion

While the conflict in the Occupied Palestinian Territories has reached unimaginable levels of violence and oppression, education remains on the margins of political discourse, forcing thousands of students, at all levels, to renounce their dreams and rights in the name of the so-called security. Segregation, restrictions, inequalities and trauma have become a permanent and repetitive condition, and cooperation projects may perpetuate this emergency status, obstructing structural progress and maintaining the status quo (Faculty of Education, University of Cambridge, et al., 2024). But when education is seen as a peaceful strategy to counteract this, it can foster community, values, and peaceful coexistence over militant training (ethnically, religiously, linguistically). What kind of education is possible to build in such violent emergency environments? The panel analyses educational practices that promote inclusion, empowerment, resistance and the right to education, as well as cooperation and capacity building/development to support civic participation, emancipation and political agency in asymmetrical contexts (Pacetti, Soriani, Castellani, 2024; Taddei et al., 2025). Purposes: Examine Palestinian experiences that foster learning for democracy under occupation. Evaluate inclusive strategies that guarantee the right to education for all students. Identify approaches to capacity building/development and transnational cooperation that are useful for strengthening schools and communities. Proposed themes Education as a practice of resilience and collective memory. Youth empowerment and active citizenship programmes. Mechanisms for international cooperation and professional training for teachers. Policies and practices to protect the right to education in conflict contexts. Inclusive education as an approach to remove obstacles to learning and participation.

WHEN SCHOOL BECOMES A SPACE OF SILENCE: DEMOCRATIC COSTS OF SUPPRESSING PALESTINIAN IDENTITY LEARNING IN EAST JERUSALEM

Safaa Debs (Hebrew University of Jerusalem (Jerusalem))

East Jerusalem | democratic education | curriculum politics

In East Jerusalem, schooling is not a neutral public service but a contested political arena where citizenship, legitimacy, and collective belonging are continuously negotiated. This paper argues that the Israeli Ministry of Education operates through a systematic curricular project that minimizes or erases Palestinian narratives from official textbooks and learning materials, producing a regime of "acceptable knowledge" that redefines what can be publicly named, remembered, and debated in the classroom (Pinson, 2020). Building on scholarship that links attacks on education to broader projects of cultural erasure, the paper situates curricular silencing within the wider logic of undermining education as a pillar of identity and rights. Recent work introducing "Educide" highlights how the dismantling of educational systems whether

through physical destruction or systemic obstruction threatens cultural continuity and collective resilience (Iriqat et al., 2025). While my focus is East Jerusalem, the concept helps foreground how education becomes a strategic site where identity is targeted and democratic futures are constrained. A central contribution of the paper is its stance on teachers. I do not treat educators as the source of silencing, nor do I moralize their pedagogical choices. Instead, I foreground the structural conditions that compel avoidance: policy and curricular ambiguity, surveillance fears, and reputational risk. Within this reality, teachers' "silence" often functions as an intelligible survival strategy an attempt to protect students, families, and themselves under conditions where controversial public issues can be misread as security threats (Gindi & Erlich Ron, 2019). Analytically, I propose a "silencing cycle" relevant to East Jerusalem: (1) curricular and policy ambiguity around Palestinian identity, (2) teachers' perceptions of professional and reputational risk, (3) pedagogical avoidance and self-censorship, and (4) students' alienation and constrained political agency in their community. I argue that this cycle produces clear democratic costs: shrinking freedom of expression in educational space, diminished recognition of minority narratives as civic knowledge, and erosion of classroom practices central to democratic learning (dialogue, disagreement, justification, and mutual recognition) (Pinson, 2020). In line with the panel's emphasis on inclusion, empowerment, and resistance, the paper concludes by outlining principles for identity-affirming democratic pedagogy approaches that can sustain civic participation and collective memory without reproducing an "emergency logic" that renders Palestinian identity inherently suspect (Pacetti et al., 2024).

CO-DESIGNING INCLUSION: A PARTICIPATORY MODEL FOR EVALUATION AND EMPOWERMENT IN EL SALVADOR, PALESTINE, AND CAMEROON

Alessandro Soriani (Department of Education Studies, Alma Mater Studiorum - University of Bologna, Italy) · **Elena Pacetti** (Department of Education Studies, Alma Mater Studiorum - University of Bologna, Italy)

international cooperation | capacity builiding | inclusive education

This contribution presents the development and transnational implementation of the Index for Inclusion and Empowerment (IEE), a participatory tool designed by the Department of Educational Sciences within international cooperation projects in El Salvador, Palestine and Cameroon hold in the past years (2012-2025). The IEE was conceived not as a prescriptive evaluation instrument, but as a capacity-building tool co-constructed with local stakeholders (including cooperation project staff, teachers, school leaders and policy-makers). Through collaborative workshops, reflective training sessions and community-based research processes, the tool supported schools and communities in identifying barriers to learning and participation and in designing inclusive activities that are really context-sensitive and meaningful for the transformation of the local contexts. Grounded in inclusive education as a rights-based and systemic approach, and inspired by the Index for Inclusion (Boost and Ainscow, 2002), the IEE promotes empowerment at multiple levels: strengthening teachers' professional agency through reflective practice and peer learning; fostering school leadership oriented toward equity and participation; enhancing dialogue between schools, communities and institutional actors; supporting policy alignment with inclusive principles. The international cooperation approach adopted moves beyond knowledge transfer logics and instead emphasizes reciprocal learning, contextual adaptation and shared governance mechanisms. Professional development pathways were embedded within local educational ecosystems, ensuring sustainability through co-design, mentoring processes and the creation of local facilitation teams. By presenting methodological frameworks, implementation processes and emerging outcomes across diverse socio-political contexts, the paper discusses how inclusive education can function as a transformative lever for strengthening schools and communities. It also reflects on the role of international academic partnerships in generating situated knowledge, fostering professional development and building long-term institutional capacity.

REFRAMING EDUCATION SYSTEMS IN SETTLER COLONIAL CONTEXTS: LESSONS FROM AREA C, WEST BANK

Mahmoud Soliman (Coventry University, United Kingdom)

Sumud | informal education | intangible cultural heritage

In contexts of settler colonial domination, where formal institutions are restricted, controlled, or undermined, education often emerges through informal and community-based practices. This paper explores how sumud (steadfastness) operates as a form of informal and non-formal educational practice within rural Palestinian communities in Area C of the occupied West Bank. Under conditions of full Israeli military control, these communities face ongoing threats of forcible displacement, land confiscation, and the systematic erasure of their historical presence and ways of life. Drawing on ten years of participatory research conducted through the On Our Land project, which focuses on protecting intangible cultural heritage in rural Palestinian communities, the paper examines how intangable cultural heritage practices function as intergenerational forms of knowledge transmission. Practices such as traditional farming, storytelling, land stewardship, communal labour, and local ecological knowledge serve as everyday pedagogies through which communities teach younger generations their relationship to land, identity, and collective resilience (Soliman, et al 2022). Rather than viewing education solely through formal schooling systems, this research highlights how intangible cultural heritage constitutes a living educational infrastructure that sustains belonging and resistance. These practices cultivate historical consciousness, environmental knowledge, and communal responsibility while reinforcing attachment to land as a central element of Palestinian identity (Soliman et al 2024) . By situating these practices within the framework of settler colonialism, the paper argues that the preservation and transmission of intangible cultural heritage represent both educational processes and acts of everyday resistance. In this sense, sumud functions not only as a political stance but also as a pedagogical framework through which communities reproduce cultural memory, sustain social cohesion, and resist displacement. This paper contributes to debates on informal education, decolonial pedagogy, and cultural resilience by demonstrating how community-based heritage practices operate as alternative educational systems in contexts of protracted colonial domination.

SPOCS FOR GAZA: DESIGNING COMMUNITY-ORIENTED ONLINE LEARNING AS RESISTANCE TO SCHOLASTICIDE

Carmelo Presicce (Massachusetts Institute of Technology, United States of America) · **Ayat Abodayeh** (Massachusetts Institute of Technology, United States of America)

Scholasticide | education in emergency | community-oriented online learning design

The ongoing Israeli military campaign in Gaza has devastated Palestinian educational infrastructure in what scholars and activists have named "scholasticide" — the systematic destruction of an entire people's right and capacity to learn (Dader et al., 2024; Alarabeed, 2025; Desai et al., 2025). In this context, a coalition of students, staff, and faculty activists across various institutions in the US, launched SPOCs for Gaza, a community-oriented online learning initiative designed to create meaningful educational opportunities for students in Gaza and displaced in Egypt (Abodayeh & Miller, 2024). This paper describes the iterative development of two rounds of the program, and reflects on how the intentional building of community across students, volunteers, and educators emerges as a core design principle for meaningful learning — a community in which students in Gaza, alongside volunteers and educators abroad, are active collaborators and decision-

makers. SPOCs (Small Private Online Courses) are specifically adapted for their audience and context (Fox, 2013). In SPOCs for Gaza, all materials are translated into Arabic or simplified, optimized for mobile access, and designed to function asynchronously to accommodate chronic internet instability. Arabic-speaking teaching assistants (TAs) provide instructional support while non-Arabic-speaking TAs simplify the material, adapt the activities and projects to align with students' context, and facilitate discussions, often on Whatsapp. The program grew from approximately 85 students in its first cohort to approximately 400 enrolled by the second round. A central finding from the first round was that academic access alone is insufficient in contexts of ongoing violence. In response, a student support team was formed, drawing volunteers from across the world, carefully vetted and onboarded through conversations drawing on lessons from the first cohort. Volunteers worked together, sustaining one another as they navigated the emotional and practical complexities of their role. Sometimes they connected their students with one another, weaving a broader peer network across the cohort and across borders. This infrastructure ran alongside a mutual aid network addressing students' basic survival needs. Together, these structures embody a core premise: that education under siege must be built around human connection at every layer and across borders. The team is currently developing another iteration of the program. The course offering is expanding to include English language courses, which are taught by educators from Gaza themselves. Teaching assistants from Gaza are also integrated into the course team, and the student support infrastructure is being strengthened so that the network of care is sustained across everyone involved. Designing community-oriented online spaces in the shadow of scholasticide is, this paper argues, an inherently political act — one that insists on the right to learn, to connect, and to create together, even under siege.

ART AND RESISTANCE

Mohammed Timraz (University of Parma, Italy) · **Emanuela Pettinari** (University of Bologna, Italy)

Art · Resistance · Sumud

Since the launch of the HeART OF GAZA project, art has become a unique tool for expressing children's emotions, feelings, and daily lives under the ongoing violence and destruction in Gaza (Timraz, Pettinari, 2025). The artworks created by children are not merely drawings: they are a direct reflection of their resilience and determination, and they embody their resistance to the daily challenges they have faced for years (Karim, 2022). Each workshop and each piece of art represents an effort to confront the harsh reality and to convey their voices to the world in a peaceful yet powerful and impactful way. Despite the continuous bombing, destruction, and the ongoing atrocities affecting children, their commitment to attend artistic spaces and continue drawing reflects the strength of their will and a form of resistance in its simplest and most profound form (Hameed, 2024). Here, art becomes a means of reinforcing Palestinian identity, expressing daily struggle, and preserving collective memory. Just as journalists resist through their work, doctors through their professions, and fishermen through their labor, children and artists in Gaza practice a form of resistance through creativity and artistic expression. Through murals, drawings, music, and poetry, artists in Gaza convey stories of resilience and hope to the world. Art is not merely a cultural activity , it is a powerful tool for preserving memory and confronting oppression. It is used to express both pain and strength through visual symbols and traditional motifs. Consequently, art becomes a form of resistance without weapons, yet it carries a strong impact in conveying identity, resilience, and hope to future generations and to the outside world.

DEMOCRACY UNDER RESTRICTIONS: A PHENOMENOLOGICAL STUDY OF THE EXPERIENCES OF TEACHERS AND STUDENTS IN PALESTINE

Nidaa Jibril (Al-Quds University, Palestinian Territories) · **Buad Khales** (Al-Quds University, Palestinian Territories)

Educational Democracy | Lived Experience | Palestine

Educational democracy is central to understanding how justice and participation are practiced within classrooms, particularly in restricted urban environments. The old schools (H2) in Hebron represent a complex model that imposes structural constraints and daily challenges on classroom interactions, making the school more than just a space for the transfer of knowledge, but rather an arena for reproducing democratic meaning in school life. The study starts from the idea that education and democracy are organically linked. John Dewey (1916/2008) argues that school is a microcosm of democratic life, where experience is built through social interaction and participation. It is also based on Gert Biesta's (2010) distinction between learning as the acquisition of knowledge and education as the process of empowering oneself as a democratic actor capable of emerging and being held accountable. This view is consistent with contemporary literature, which emphasizes that democratic education is achieved through daily practice in the classroom, not just through theoretical discourse (Brunker, 2025). In light of this, the study seeks to answer the fundamental question: What is the essence of the lived experience of educational democracy among teachers and students in the old schools of Hebron, and how do they reconstruct the meaning of justice and participation within a school space surrounded by urban constraints? The study is based on a qualitative approach and will target a purposive sample of teachers and students in upper elementary and secondary school who experience daily classroom interactions. The research will combine several data collection tools, including in-depth individual interviews and focus groups that highlight the collective voice of students and teachers, as well as the collection and analysis of reflective writings in which participants reflect on the details of their daily experiences. This data will be analyzed to extract core themes that reveal how meaning is constructed, democracy is produced, and social and spatial constraints are interacted with. The results are expected to reveal a dialectical tension between external constraints and efforts to build more equitable classroom spaces, where teachers develop pedagogical strategies that promote recognition and participation, and students redefine their school attendance as a daily exercise in democratic agency. The importance of this study lies in reframing the understanding of education in constrained urban environments, as it shifts teachers and students from the position of recipients to that of democratic actors and active participants in the construction of the educational experience. The study offers recommendations to curriculum developers and educational decision-makers on the need to integrate the lived experiences of teachers and students into curriculum design. It also contributes to the international debate on the relationship between learning and democracy in constrained environments, focusing on lived experience as a site for the production of educational meaning and democratic change.

RESISTANCE THROUGH EDUCATION: EXPERIENCES OF PALESTINIAN SCHOOLS IN JERUSALEM

Nihad Abu Irmeleh (Al Quds University, Israel)

Resistance | Education | Jerusalem

Resistance through Education: Experiences of Palestinian Schools in Jerusalem Nihad Abu Irmeleh This research examines the role of education as a tool for cultural and social resistance in Palestinian schools in Jerusalem under the reality of occupation and its accompanying policies that exert pressure on the educational system. These policies include inter-

ference with curricula, restrictions on movement, and attempts to reshape cultural and national identity. The research is based on the fundamental premise that education is not merely a process of knowledge transfer, but rather a vital space for strengthening national awareness and preserving Palestinian identity, especially within contexts of domination and colonialism. The research focuses on the experiences of teachers in Jerusalem schools, considering them key actors in the process of building students' awareness. It draws on a theoretical framework that evokes concepts of cultural resistance, particularly those proposed by Paulo Freire on "education for the oppressed," as well as studies of education in colonial contexts, to understand how education is repurposed as a tool for resilience and peaceful resistance. The research questions revolve around the nature of the challenges faced by teachers, the strategies they employ to strengthen Palestinian identity, and the extent of the impact of these efforts on students and the local community. The importance of this research lies in its documentation of field experiences specifically in Jerusalem, a case that has not received sufficient attention in educational literature, despite its unique political, religious, and cultural context. It also contributes to providing knowledge that can benefit educational policymakers and institutions supporting education by highlighting the role of education in promoting peaceful resistance and supporting the resilience of the local community. The research aims to explore the role of education in strengthening cultural and social resistance, identify the most significant challenges hindering teachers' work, analyze the educational strategies they use to instill national awareness, and assess the impact of these strategies on the cultural identity of emerging generations. Ultimately, it offers practical recommendations to support Palestinian schools in Jerusalem. Methodologically, the research employs a mixed design combining quantitative and qualitative approaches. The sample comprises fifty teachers from Palestinian schools in Jerusalem, selected using stratified random sampling to ensure representation of different educational levels and genders. A questionnaire is used to collect statistical data on challenges and strategies, while semi-systematic interviews are conducted with a subsample to deepen the qualitative understanding of personal experiences. Quantitative data are analyzed using descriptive statistical methods and correlation analysis, while interviews are subjected to objective content analysis to extract key patterns. The results are then integrated to provide a comprehensive picture of education as a daily resistance practice that fosters identity and belonging in a complex political reality.

REFUSING ERASURE: GAZAN WOMEN ENGAGING IN EDUCATIONAL RESISTANCE

Ayat Abodayeh (Massachusetts Institute of Technology, United States of America) · **Carmelo Presicce** (Massachusetts Institute of Technology, United States of America)

scholasticide | Gazan women | education under siege

People in Gaza have long faced systemic colonial violence through blockade, occupation, and the deliberate restriction of movement and resources. Since October 2023, this violence has escalated into an active genocide (Albanese, 2024), which has also targeted the educational infrastructure that has long sustained learners, through a deliberate campaign of scholasticide (Dader et al., 2024; Alarabeed, 2025; Desai et al., 2025). This study examines resistance to this scholasticide by centering Gazan women as knowledge-makers and knowledge-seekers who continue to sustain education amid the deliberate destruction of schools and universities. By documenting their testimonies and analyzing their embodied experiences, this study presents Gazan women as active intellectual and practical laborers, refusing the "women-and-children" rhetoric that reduces them to passive victims or martyrs and recognizing them as forces that sustain education when everything around them is deliberately destroyed. Besides facing systemic colonial violence, Gazan women must also contend with patriarchal norms that constrain their ambitions and freedom of movement. These norms dismiss their educational role, reducing them to "stay-at-home mothers" and erasing their crucial contributions to building communities of care. The study reveals how the genocide has further intensified these patriarchal harms: forced marriage, for

instance, has been increasingly normalized as economic necessity. Drawing on decolonial and feminist critical frameworks (Smith, 2021), this study examines the construction of informal learning spaces as a form of knowledge production with implications for how indigenous and marginalized women globally resist systemic erasure. The study unfolds in two phases. The first gathers oral testimonies from Gazan women educators and students through narrative interviews, exploring their relationship to education before and during the genocide. The second, developed collaboratively with participants, uses photo-based inquiry to build a multimedia archive of stories told through images they themselves captured. Across both phases, participants are invited to reimagine the rebuilding of educational spaces through the lens of "critical hope" (Freire, 1992). The study relies on snowball sampling via existing community networks, prioritizing trust, safety, and voluntary participation in a highly sensitive context. Through the experiences of a small group of women in Gaza, preliminary findings illuminate how education persists as an act of resistance under genocide. Example narratives include how women came to together to create alternative classrooms using improvised materials such as whiteboards made from tarps and nylon. Students continued their studies despite targeted airstrikes on internet hubs they frequented and the manual survival labor that they had to go through. Across these testimonies, participants insisted that their efforts in maintaining education are a temporary rescue, not a substitute for real schooling, refusing to let their resilience obscure the ongoing catastrophe affecting vulnerable learners in Gaza. This study bears witness to Gazan women's crucial role in sustaining education, documenting their unrecognized struggles, and most importantly, what they are fighting to keep alive across communities.

WHEN PLAY BECOMES AN ACT OF RESISTANCE: INFORMAL EDUCATION AND DEMOCRATIC AGENCY IN AIDA CAMP

Dario Ruggieri (Primary school teacher, Italy) · **Sofia Torresani** (Sapienza, University of Rome)

Informal education | Democratic agency | Palestinian refugee camps

Aida Camp is one of more than sixty Palestinian refugee camps established in the aftermath of the Nakba and today offers a particularly significant site for examining contemporary forms of educational resistance under conditions of colonial occupation and systemic oppression. Founded in 1949 and formally recognised in 1950, the camp covers less than one square kilometre. Extreme population density, overcrowded housing, severe restrictions on mobility, and constant exposure to military violence shape everyday life. The apartheid wall further defines both the camp's geography and its symbolic condition: it physically encloses the area and structures daily existence through separation, surveillance, and territorial fragmentation (Ghannam & Haar, 2018). In this context, education is not simply a matter of access to schooling; it becomes a social practice through which collective survival, memory transmission, and political subject formation are sustained. Critical pedagogy helps frame education as a terrain of conflict and emancipatory possibility, where critical consciousness and transformative agency can develop even under structural oppression (Freire, 2022). At the same time, educational practices create spaces for recognition, voice, and resistant subjectivity within systems of exclusion (hooks, 2020). In the Palestinian context, youth and community centres therefore emerge not only as places of extracurricular support, but as pedagogical infrastructures that sustain collective agency, political imagination, and forms of democratic learning under occupation. This paper draws on qualitative field interviews with three organisations engaged in social and educational work inside the camp: Amal al Mustakbal, Aida Youth Centre, and Lajee Centre. Through a context-specific

pedagogical analysis, it explores how these organisations create informal educational spaces where children, adolescents, and young adults can process traumatic experiences, build a sense of belonging, and experiment with forms of civic participation rooted in everyday collective life. Particular attention is paid to the meanings attached to these centres locally. One interview describes them as “spaces of light in this gloomy place”, a phrase that captures their role not only as protective environments but also as spaces where social imagination remains possible despite the permanence of violence. This educational persistence becomes especially significant in a camp that has existed for more than seventy years and can no longer be understood through the temporary logic of humanitarian emergency. Aida shows how the refugee camp has become a permanent political and social framework in which suspended citizenship, daily resistance, and practices of community care are constantly renegotiated. The analysis shows that informal education plays a decisive role in producing concrete forms of inclusion and in reinterpreting the right to education under occupation. These practices respond to structural deficiencies produced by military control, while also creating possibilities for collective existence that go beyond humanitarian management. Through memory work, artistic production, sport, storytelling, and civic engagement, these organisations generate forms of empowerment that connect democratic participation to everyday resistance. Analysing these experiences helps illuminate how education, under conditions of occupation and colonial domination, continues to function as a language of resistance, a practice of future-making, and a concrete exercise of democracy in daily life.

DIGITAL BRIDGES FOR CIVIC PEACE: VIRTUAL EXCHANGE AS A CATALYST FOR PAN-PALESTINIAN DEMOCRATIC EDUCATION

Rawan Tahboub (Friedrich Schiller University Jena, Germany)

Virtu-Peace | Virtual Exchange for peace education | Digital Civic Third-Spaces

Palestinian society faces a unique condition of "enforced fragmentation," where geographical and political barriers prevent the formation of a unified civic discourse. This structural isolation affects youth across the West Bank, the Gaza Strip, East Jerusalem, the "Arab 48" community, and the global Diaspora, creating a landscape of disconnected "lifeworlds." This paper presents the Virtu-Peace initiative (Virtual Interactive Reconciliation for Transforming Unity in Palestine) as a pedagogical intervention that utilizes Virtual Exchange (VE) to bridge these divides. Rather than focusing on external normalization, the project prioritizes "Civic Peace"—an internal, community-led process of social reconciliation and democratic capacity-building. Theoretically, the study utilizes Jürgen Habermas’s Theory of Communicative Action (1981) to analyze how digital "third spaces" can host a functional Palestinian Public Sphere. By facilitating synchronous, online dialogues, Virtu-Peace creates a digital environment modeled after the "Ideal Speech Situation," where the "unforced force of the better argument" allows youth from disparate regions to negotiate a shared civic identity. This process moves beyond mere interaction; it fosters Deliberative Democracy by encouraging participants to transition from strategic survival-oriented communication to communicative action oriented toward mutual understanding. A key strength of the Virtu-Peace model is its inclusive reach. By connecting youth in Gaza and the West Bank with their peers in East Jerusalem, the Arab 48, and the Diaspora, the project bypasses physical checkpoints to foster a "pedagogy of resilience." The curriculum addresses the specific identity tensions and democratic aspirations of each group, treating them not as isolated fragments, but as integral components of a collective civic body. The findings suggest that VE provides a robust framework for sustaining democratic values in conflict-affected environments, demonstrating that technology-mediated education can serve as a vital tool for internal social reconstruction and the cultivation of active, democratic agency.

INTERNATIONAL COOPERATION FOR INCLUSION AND EMPOWERMENT: A PARTICIPATORY RESEARCH FRAMEWORK FOR INCLUSIVE EDUCATION IN EMERGENCY

Ilaria D'Angelo (University of Macerata, Italy) · **Arianna Taddei** (University of the Republic of San Marino, San Marino) · **Tommaso Santilli** (University of Macerata, Italy)

Inclusive Education | International Cooperation | Participatory research

In the Palestinian context, a territory marked by physical and symbolic barriers, restrictions on freedom, and continuous disruptions to daily life, education represents both a right under threat and a vital resource for emancipation and social transformation. Within this challenging scenario, international cooperation can offer meaningful spaces for intercultural dialogue, mutual learning, and the co-construction of context-sensitive pedagogical frameworks, therefore sustaining educational continuity and local capacities to foster democratic processes. In line with these considerations, this contribution presents a participatory research model grounded in international cooperation between the University of Macerata (Italy) and Al-Quds University (Palestine), developed within the Palestinian context through a structured workshop experience which involved a team of researchers in the fields of education and special education from both universities. The participatory workshop was conceived as a dialogical and intercultural space aimed at creating shared meanings, jointly identifying challenges and opportunities, and co-constructing research strategies capable of investigating how inclusion, resilience, and community wellbeing are sustained in the Palestinian context. Methodologically, the workshop was conducted with a participatory and reflexive approach, valuing local knowledge and lived experiences of Al-Quds University researchers as an essential epistemic resource. In this sense, the participatory workshop not only offered a structured setting to design and develop a research on inclusive education in emergency: it also represented a dimension for mutual understanding and empowerment, where the very concepts of inclusion and wellbeing were critically examined and jointly re-signified. Framed within the paradigms of Education in Emergency and inclusive education, the study explores how participatory methodologies for international cooperation can foster democratic and inclusive processes in contexts affected by protracted conflict, leveraging research practices to foster empowerment, reciprocal learning, and social impact. Specifically, the contribution illustrates the structure, development and main outcomes of the workshop, highlighting the dynamic process that led to the definition of a field research on inclusive education in emergency within the Palestinian context. In this direction, the co-construction of shared interpretative frameworks and research tools will be presented, highlighting the generative power of intercultural scientific dialogue and putting forth the voices and visions of Palestinian researchers. By presenting this participatory research framework and its practical application, the paper argues that international cooperation based on participatory approaches and intercultural dialogue can foster transformative processes capable of crossing physical and symbolic borders, sustaining the Quality of Life of school communities and promoting democratic participation in contexts affected by protracted conflict.

LEARNING PALESTINE SOLIDARITY: THE JEWISH NATIONAL FUND AS PEDAGOGICAL CASE STUDY

Eurig Scandrett (Queen Margaret University, United Kingdom)

Palestine solidarity | social movement learning | Jewish National Fund

There has been an international response from civil society to the genocide in Gaza through a growth in activism in solidarity with the Palestinian people. Horrified by what was happening in Gaza, many people have joined the existing Palestine solidarity movements, in some cases being newly politicised and learning about the Zionist settler colonisation of Palestine for the first time. The existing solidarity movements, following September 2023, needed to respond, often with informal and non-formal education along with practical campaigning (praxis), to provide some history and context to the Palestinian anti-colonial struggle. At the same time, significant barriers to this political education and action exists, not least the efforts of international Zionist and pro-Israel propaganda, and the actions of the state in seeking to shut down protests – especially in countries such as the UK, where the state is allied with Israel and complicit in its ethnic cleansing operations. In this context, the Jewish National Fund (JNF), as a Zionist institution established for the replacement of indigenous Palestinians with Jewish settlers (Lehn and Davis, 1988; Leon, 2021; Pappe, 2006), provides a useful pedagogical case study as well as effective target for political action. Drawing on activities, especially in Scotland as a devolved administration within the UK, this paper describes several instances of formal, non-formal, informal and popular education in which the JNF is used to provide a deeper political analysis of the current situation in colonised Palestine and stimulate action in solidarity with the Palestinian anti-colonial struggle. The case study is situated theoretically in the academic literature on social movement learning (Foley, 1999; Hall et al, 2012), Popular Education (Freire, 1972; Moyo, 2020) lifelong education (Gelpi, 1985; Scandrett et al, 2010) and public sociology (Burawoy, 2005; Scandrett, 2020).

MEANINGFUL LEARNING AS A PATHWAY TO DEMOCRATIC EDUCATION: EVIDENCE FROM ENGLISH LANGUAGE CLASSROOMS IN THE JERUSALEM SUBURBS

Raneen Alkhanafsa (Al.Quds University, Palestinian Territories) · **Prof. Buad Khales** (Al.Quds University, Palestinian Territories)

Meaningful Learning. Democratic Education. English Language Teaching | Palestine | Student Agency

This study investigates the extent to which meaningful learning principles, grounded in David Ausubel's theory, are implemented in English language classrooms at the basic education stage in the Jerusalem suburbs, and examines their potential contribution to fostering democratic educational practices. While meaningful learning emphasizes the integration of new knowledge with learners' prior cognitive structures, democratic education highlights participation, dialogue, critical thinking, and student agency. Despite growing theoretical interest in both frameworks, limited empirical research has examined their intersection within conflict-affected educational contexts. A mixed-methods descriptive design was employed. A randomly selected sample of 71 English language teachers (from a population of 190) completed a structured questionnaire measuring the implementation of meaningful learning practices, and semi-structured interviews were conducted with 10 teachers to explore their perceptions and classroom experiences. Quantitative findings revealed a high overall level of implementation (M = 4.21, SD = 0.67), particularly in activating prior knowledge, promoting conceptual connections, and emphasizing understanding over memorization. No statistically significant differences were found across gender, academic qualification, or years of experience; however, participation in professional training demonstrated a significant positive effect. Thematic analysis further indicated that meaningful learning practices contribute to enhancing student voice, collaborative engagement, and critical thinking. The findings suggest that meaningful learning functions not only as a cognitive framework but also as a pedagogical pathway toward democratic classroom culture. In the Palestinian context, classrooms may operate as micro-democratic spaces that nurture participation and resilience despite structural constraints. Integrating meaningful learning with democratic pedagogies may therefore support both academic depth and civic empowerment. Keywords: Meaningful Learning; Democratic Education; English Language Teaching; Palestine; Student Agency.

FROM INDEPENDENT LIVING TO RETHINKING HUMANITARIAN RESPONSE: BEYOND "LEAVE NO ONE BEHIND". DISABILITY, PARTICIPATION, AND INCLUSIVE HUMANITARIAN ACTION IN GAZA

Yousef Hamdouna (EducAid, Italy)

Disability Inclusion | Human Rights–Based Approach | Inclusive Humanitarian Action

EducAid's experience in the Gaza Strip is grounded in a human rights–based approach that recognizes persons with disabilities as rights-holders rather than passive recipients of assistance. Empowerment, self-determination, and emancipation are central to this work. In 2019, EducAid has established the Gaza Independent Living Center, promoting autonomy through customized assistive devices, peer psychosocial support, and vocational training. Over three years, the Center supported more than 600 persons with disabilities and distributed over 1,000 assistive devices, many produced locally. Its multidisciplinary team was largely composed of professionals with disabilities. This affirmed a key principle: persons with disabilities are not passive beneficiaries but active agents shaping solutions that affect their lives and communities. In 2022, this approach was strengthened through FabLabs with 3D printers for production of customized assistive devices. After October 7, 2023 the subsequent military offensive destroyed the Center and forced the team into repeated displacement. Yet the human capital built over previous years was not lost. Many team members, including professionals with disabilities, continued working on the ground, adapting their skills to the humanitarian context. This continuity shows how investments in empowerment, local expertise, and disability leadership can generate resilience even when physical infrastructure is destroyed. The war has produced an unprecedented humanitarian crisis. Over 90% of Gaza's population has been displaced, and the formal education system has collapsed, with more than 95% of schools damaged or destroyed. In response, Temporary Learning Spaces emerged as community initiatives organized by families, teachers, and volunteers to maintain children's learning. In 2024, OCHA supported these community-led initiatives, integrating them into the humanitarian response. Despite these efforts, children with disabilities remain among the most excluded because of physical barriers, lack of adapted materials, and absence of assistive devices. At the same time, the number of people living with disabilities has increased dramatically: WHO estimates around 42,000 new cases of permanent injuries, while 92% of roads are damaged or destroyed, making the environment inaccessible. In such conditions, standardized humanitarian responses often fail to include persons with disabilities and risk reinforcing exclusion. EducAid has mobilized its team through a twin-track approach, acting both on the environment and at the individual level. It promotes disability mainstreaming within Temporary Learning Spaces, including 23 spaces directly supported by EducAid, reaching over 3,000 children with and without disabilities, while improving accessibility and training teachers on inclusive education in emergencies. Furthermore EducAid implements targeted interventions for children with disabilities through an outreach approach, reaching them in displacement settings. The team develops context-appropriate, personalized solutions in reactivated FabLabs using 3D printing, recycled materials, and local resources. In a territory where many assistive devices cannot enter, local digital fabrication reduces dependence on external supplies and ensures continuity of interventions. The most transformative element lies in the leadership of professionals with disabilities, who redefine their role in humanitarian action, not as passive beneficiaries but as protagonists and creators of solutions. This experience shows that inclusive humanitarian action requires rethinking dominant humanitarian models, placing rights, dignity, participation, and disability leadership at the center.

THE DAILY JOURNEY: A PHENOMENOLOGICAL STUDY OF STUDENTS' LIVED EXPERIENCE CROSSING MILITARY CHECKPOINTS AS AN EVERYDAY DEMOCRATIC ACT AND RESISTANCE TO ENFORCED IGNORANCE

Haneen Bostanje (Al-Quds University, Palestinian Territories) · **Bu'ad Muhammad Al-Khalis** (Al-Quds University, Palestinian Territories)

Military Checkpoints | Lived Experience | Everyday Resistance

Israeli military checkpoints and gates in the occupied Palestinian territories constitute a geographical and political reality that imposes its control over the details of daily life, particularly the educational journey. These checkpoints go beyond being mere physical traffic barriers; they have become tools aimed at fragmenting and isolating the educational environment (Nicolai, 2007). While many previous studies have focused on the quantitative impact of these checkpoints on the educational process, this qualitative study fills a crucial research gap by exploring the "lived experience" of Palestinian students. The study views their daily school commute not merely as a state of suffering, but as a democratic act and a daily practice of resistance against enforced ignorance, where the mere insistence on crossing these military points and being present in the classroom transforms into a living form of steadfastness and an assertion of existence (Rijke & van Teeffelen, 2014). This study adopts a qualitative research design and a phenomenological approach to gain insight into the meanings high school students construct around their daily journey across checkpoints and to understand its pedagogical implications. The study seeks to answer the core question: What is the essence of the students' lived experience of crossing military checkpoints daily, and how do they construct meaning around this journey as a democratic act and a living practice of resistance to enforced ignorance? Methodologically, the study relies on a multi-tool qualitative design to ensure a comprehensive understanding of the lived experience, targeting a purposive sample of students who are forced to cross military checkpoints and gates daily (such as friction zones in the South Hebron Directorate). Instead of relying on a single tool, the research integrates in-depth individual interviews, focus groups that highlight the students' collective voice, and the collection and analysis of reflective writings in which students narrate the details of their daily journey. This intersected data will be analyzed to extract the main themes that deconstruct the essence of this experience and reveal its everyday resistance mechanisms. Preliminary insights are expected to reveal that the round trip across the checkpoint transforms from a mere obstacle into a space for informal learning, where students develop coping strategies and high psychological resilience. The experience also shows how the feeling of oppression intersects with the insistence on being present in the classroom as a form of empowerment and democracy. The significance of this study lies in reframing the narrative around education in conflict zones; it shifts the student from the position of a submissive victim to that of a democratic and resisting agent. The study offers recommendations for curriculum developers and educational decision-makers on the importance of integrating these lived experiences into school curricula and providing the necessary social-emotional learning (SEL) support, thereby enhancing students' steadfastness and affirming that education under occupation is the highest degree of democratic practice and resistance.

Learning to Learn for Democracy, Empowerment and Equity

PANEL CONVENORS: Cristina Stringer (INVALSI)

PANEL KEYWORDS: Learning to learn, Evaluation, Interventions

This panel proposal focuses on the Learning to Learn (L2L) hyper-competence, included among Europe's key competencies for lifelong learning.This theme has attracted new attention among international scholars (Deakin Crick, Stringher, Ren, 2014) for its promise to help closing achievement and attainment gaps among students coming from disadvantaged backgrounds, ultimately yielding to better life outcomes. However, there are several aspects of this competence that merit attention. First and foremost, how to observe its developmental trajectory from early childhood up to adulthood (Vainikainen & Hautamäki, 2022) and how to promote it at scale in preschools, schools, universities and other non-formal and informal settings (Mannion & Mercer, 2016). Considering the strong inter-disciplinarity needed to tackle L2L, we invite international and national scholars to submit abstracts that aim at the following topics: - Developmental progression of and ways to support L2L throughout the lifespan. - Observation, assessment and evaluation tools to capture its unfolding in formal, non-formal and informal settings lifelong. Qualitative, quantitative, mixed methods, longitudinal approaches to the study of L2L are welcomed, and theoretical or phylosophical too. A thorough discussion on these topics is needed among scholars and practitioners supporting learners in different contexts, if L2L has to serve the purpose it claims, i.e. help learners of all ages reach their full learning and attainment potential, thereby improving their life outcomes and wellbeing as humans, not just as workers. Otherwise, L2L risks to become an elite concept for the affluent few, or an economic imperatiive or at best a vacuum slogan.

FROM STUDY SKILLS TO LEARNING TO LEARN: EVIDENCE-INFORMED APPROACHES TO INCLUSION IN LOWER SECONDARY SCHOOLS

Marianna Valente (Università degli Studi Roma Tre) · **Marina Chiaro** (Università degli studi Link) · **Amalia Lavinia Rizzo** (Università degli Studi Roma Tre)

Study skills | Inclusive education | Evidence-informed teaching

Learning to Learn (L2L) is a core competence for lifelong learning, as it supports individuals' ability to autonomously organize and manage their learning pathways throughout life (Council of the European Union, 2018). The study method can be understood as the operational dimension of L2L, as it represents an integrated set of cognitive, metacognitive, motivational, and organizational processes that enable students to plan, monitor, and evaluate their learning, consciously adapting strategies to the specific demands of different subjects. However, when this competence is not explicitly and systematically taught, its development tends to follow uneven trajectories—particularly among students with Specific Learning Disorders (SLD) and Attention Deficit/Hyperactivity Disorder (ADHD). In these cases, weaknesses in executive functions and self-regulation processes (APA, 2022; Barkley, 1997) hinder independent study management, time organization, deep text comprehension, and the development of effective strategic repertoires (Traversetti & Rizzo, 2023). Without targeted instructional guidance, access to the L2L competence may thus be compromised, with negative consequences for academic achievement and the fulfillment of individual potential. This contribution presents and discusses the initial findings of a research-training project with a quasi-experimental design, involving first-year lower secondary school classes in two Italian regions. Through teacher training and the implementation of an operational toolkit, the project aims to promote students' study methods. The assessment of study competences was conducted using the AMOS 8–15 battery (Cornoldi et al., 2005), which provides a comprehensive evaluation of cognitive, metacognitive, and motivational dimensions related to the acquisition of an autonomous and personal study approach. A descriptive analysis of the sample, integrated with a comparison against AMOS normative data, allowed for the delineation of students' Learning to Learn profiles at the beginning of lower secondary school. Particular attention was given to dimensions of self-regulation, organization, and study skills, and to the trajectories of students with SLDs and ADHD. Preliminary results make it possible to discuss the extent to which the competence of "learning to study" is distributed within the sample and whether inequalities intersect with special educational needs, particularly in the presence of SLDs or ADHD. The paper concludes with reflections on the pedagogical relevance of these baseline findings in shaping evidence-based interventions on study methods—conceived from a perspective of equity and Universal Design for Learning (CAST, 2018)—to support the full development of every student's learning potential.

LEARNING TO LEARN IN THE SCHOOL-TO-UNIVERSITY TRANSITION: EDUCATIONAL COUNSELLING AS A CONTEXT FOR OBSERVING AND SUPPORTING STRATEGIC AUTONOMY

Sofia Torresani (Sapienza, University of Rome, Italy) · **Carlotta Casacci** (Alma Mater Studiorum, University of Bologna) · **Massimo Marcuccio** (Alma Mater Studiorum, University of Bologna)

Learning to Learn | Educational counselling | School-to-University transition

Learning to learn (L2L) is increasingly recognised in higher education as a key competence for lifelong learning, empowerment, and equitable participation. In European debates, it is commonly described as a hyper-competence that mobilises cognitive, metacognitive, motivational, and socio-affective resources to sustain learning across contexts (Caena & Stringher, 2020; Stringher et al., 2021). However, limited attention has been paid to how learners reorganise their learning strategies when previously effective approaches become inadequate in demanding academic contexts. To address this issue, the study situates L2L within Pellerey's (2006) framework of "self-direction" and conceptualises it as a meta-strategic competence concerned with the reconfiguration of learning strategies. In Pellerey's framework, learning self-direction refers to the capacity through which individuals orient and regulate their actions across life domains through processes of self-determination and self-regulation supported by strategic competencies that sustain learning regulation. Learning to learn is conceived as the reflective capacity through which individuals reorganise their strategic competencies and reconfigure learning strategies when the mechanisms that sustain learning regulation prove insufficient (Marcuccio, 2016). The study explores how university students manage their studies and how limitations in their strategic competencies affect their capacity for self-direction. It also proposes a pedagogical interpretation of educational counselling as a situated environment where students can reflect on their study practices, identify ineffective strategies, and develop more effective ways of directing their learning. The study contributes to the literature by conceptualising L2L as a strategic competence of learning strategy reconfiguration and by interpreting educational counselling as an institutional pedagogical dispositif through which this competence can be observed and supported. The study is based on 298 semi-structured educational counselling sessions conducted between 2023 and 2026 with 220 students at the University of Bologna as part of the Career Guidance project. Two senior pedagogists conducted the interviews using a non-directive approach and produced detailed field notes, as interviews were not audio-recorded due to legal restraints and the formative nature of the setting. Data were analysed using an inductive and reflexive thematic approach (Braun & Clarke, 2006), with recurrent thematic patterns across sessions as the primary unit of analysis. Findings reveal significant fragilities in students' capacity to direct their learning. Difficulties in organising study time, sustaining concentration, and planning learning activities emerge as recurrent issues, often accompanied by performance anxiety and a perceived misalignment between effort and outcomes. The transition from secondary school to university represents a critical moment where the demand for autonomy frequently exceeds students' strategic resources, reflecting a mismatch between institutional expectations and students' preparedness that affects engagement and persistence (Tinto, 1975). Interpreted through the proposed framework, these difficulties indicate limitations in the strategic competencies that sustain the regulation of learning activity. Institutional guidance can therefore be conceptualised not merely as a support service but as a pedagogically structured institutional dispositif through which learning to learn becomes observable and developmentally supported. Promoting L2L in higher education thus emerges as a structural issue of governance and equity, highlighting the need to integrate strategic learning autonomy into university guidance and retention policies.

TEACHER PROFESSIONAL DEVELOPMENT FOR THE USE OF EVIDENCE-INFORMED TEACHING STRATEGIES: A QUASI-EXPERIMENTAL STUDY IN PRIMARY SCHOOL

Marianna Traversetti (Sapienza, Italy) · **Alessio Schiavone** (Università degli Studi Roma Tre, Italy) · **Amalia Lavinia Rizzo** (Università degli Studi Roma Tre, Italy)

evidence based education | teacher training | inclusive education

For an equitable, inclusive, and democratic education, teacher development is an indispensable component in equipping educators with the tools necessary to address the challenges of instructional practice with a reflective, critical, and empirical stance. It is well established that, in order to teach effectively, teachers must possess a sophisticated methodological and pedagogical expertise capable of ensuring the quality of instructional design in response to the individual educational needs of their students. This constitutes a core teacher competency — one that enables educators to remain flexible within a framework of reflective professionalism, and to operationalize instruction with a critical mindset, fostering recursive reflection on the outcomes of teaching and the ongoing questioning of one's own practice, in a continuous process of rethinking and improvement that might aptly be described as a Deweyan-inspired disposition. In Italy, teacher education and training remains a highly contested issue, particularly because, to this day, no coherent and comprehensive system exists that effectively integrates both the dimensions more closely tied to career progression and salary structures, and those pertaining to the broader and more complex conception of teacher professionalism — one that moves decisively beyond the reductive view of the teacher as a mere transmitter of knowledge. This paper reports on an experimental study developed as a follow-up to the previous national survey 'RC-RT' conducted by SApIE, carried out in third-grade primary school classes using the EBID — Evidence-Based Improvement Design methodology (cALVANI, mARZANO, 2020). The study employed a non-probability purposive sampling design, comprising 46 third-grade classes (28 experimental and 18 control) drawn from three Italian regions (Lombardy, Lazio, and Abruzzo), involving a total of 821 students, of whom 510 were enrolled in experimental classes and 311 in control classes. The project engaged teachers in implementing the instructional strategy of Reciprocal Teaching (PalincsAR, bROWN, 1984) from an inclusive perspective, following their participation in a purpose-designed professional development course, in classes that also included students with intellectual disabilities, specific learning disorders (SLD), other specific developmental disorders (SDD), and linguistic and cultural disadvantage. The program yielded substantial learning gains in the experimental classes, including among students with Special Educational Needs (SEN). Specifically, effect sizes (Kraft, 2023)for typically developing students indicated a moderate program effect, corresponding to a three-month learning advantage in the experimental group over the control group across all administered measures: reading comprehension (ES = +0.26), summarizing (ES = +0.21), and vocabulary (ES = +0.22). Students with SEN in the experimental classes demonstrated even more pronounced gains: a five-month advantage in reading comprehension over the control classes (MT Reading Test, ES = +0.38), a six-month gain in lexical enrichment reflecting a high level of effectiveness (Verbal Meaning Test, ES = +0.45), and a seven-month gain in summarizing ability (Summary Writing Test, ES = +0.56)."

LEARNING TO LEARN WITHIN RESEARCH INFRASTRUCTURES: TRANSFORMATIVE TRAINING FOR COMMUNITY BUILDING IN FOSSR

Serena Fabrizio (CNR-IRCrES – Research Institute on Sustainable Economic Growth, National Research Council of Italy, Rome, Italy) · **Rita Giuffredi** (CNR-IRCrES – Research Institute on Sustainable Economic Growth, National Research Council of Italy, Rome, Italy) · **Erica Rizziato** (CNR-IRCrES – Research Institute on Sustainable Economic Growth, National Research Council of Italy, Rome, Italy)

action research | lerning to learn | participative training

Far from being regarded as the result of pure individual intellectual production, scientific knowledge and practices are now widely considered by scholars as arising from interactions among heterogeneous social actors and institutional contexts, especially when dealing with issues that are societally relevant and intersecting different understandings by scientific disciplines and social sectors (Gibbons et al., 1994; Jasanoff, 2004, Funtowicz & Ravetz, 1993). In this perspective, Research infrastructures (RIs) can be regarded as socio-technical systems, with the social components – namely the engaged community of developers, users and stakeholders – playing a critical role in sustaining effectiveness and long-term sustainability. This contribution presents a training experimentation conducted within FOSSR RI, a NextGenerationEU project aimed at fostering open science in social science research, which was proposed to the developing community of the infrastructure's contributors, users and stakeholders. The programme aimed to complement traditional training methods by offering sessions designed to stimulate transformative learning, empowerment, and community building among researchers, technologists, and stakeholders (Spinello & Fabrizio, 2025). The underlying premise was that incorporating transformative methodologies into the development of a research infrastructure could promote critical learning, collaborative empowerment and distributed leadership, particularly relevant in complex knowledge ecosystems where infrastructures function not only as technical platforms but also as spaces for interaction, shared problem framing and collective learning. Within this framework, the Action Research Sessions played a central role in cultivating learning-to-learn dynamics. These sessions were developed at CNR-IRCrES as part of a research initiative to rethink the new competencies essential for social science researchers (Rizziato, 2020, 2022a, 2022b). These sessions adopted a transformative methodological approach based on systemic thinking and horizontal leadership, focusing on transformative learning for processes and competencies. This was achieved through the integration of cognitive, emotional, and volitional dimensions to develop both subjective and intersubjective awareness, encouraging participants to take an active role. They worked according to a "horizontal leadership" approach – more accurately defined as systemic and evolutionary development leadership – capable of synergistic learning within the project thanks to forms of collective refocusing on the desired impact. The work sessions aimed to provide learners with theoretical perspectives and practical exercises to shift the focus of research towards identifying the actual beneficiaries of actions, and to reconsider the entire project from a systemic perspective. Through a combination of reflexive enquiry, co-design and experiential learning, participants were encouraged to formulate and reformulate specific "development questions" – conceived as systemic questions – to explore the feasibility of innovative ideas, and to experiment with processes in which personal, organisational and collective learning occurred simultaneously, creating value for all stakeholders. The FOSSR experience with Action research sessions shows how learning to learn can be interpreted as a collective competence emerging within research communities engaged in collaborative knowledge production. Participatory training environments such as these create the conditions for reflexivity, shared and transformative learning aimed at community building, contributing to the development of inclusive and socially robust research communities capable of critical thinking and the co-creation of public value within Research Infrastructures.

FOSTERING LEARNING TO LEARN IN PRESCHOOL AND PRIMARY EDUCATION: AN INVESTIGATION OF TEACHERS' CONCEPTIONS, PRACTICES, AND PROFESSIONAL NEEDS

Annamaria Gentile (Università degli Studi di Modena e Reggio Emilia, Italy) · **Lucia Scipione** (Università degli Studi di Modena e Reggio Emilia, Italy) · **Agnese Vezzani** (Università degli Studi di Modena e Reggio Emilia, Italy)

Learning to Learn | Teacher Education | Teachers' Conceptions

This contribution reflects on the outcomes of a professional development path focused on the "Learning to Learn" (L2L) competence, developed as part of an internship project related to the Master's Degree Program in Primary Teacher Education at the University of Modena and Reggio Emilia (academic years 2021/22–2025/26). In line with the scientific literature that identifies L2L as a factor of equity and democracy (Deakin Crick, Stringher, Ren, 2014), the study proceeds from the hypothesis that the training program fostered among participants a broad view of competence (Hounsell, 1979), evident both in theoretical conceptualizations and in the stated pedagogical choices for school contexts. At the same time, the research group acknowledges the complexity involved in operationalizing the construct and the presence of several critical issues in everyday educational practice. The investigation therefore aims not only to identify elements of coherence with the proposed framework, but also to highlight limitations of the training program and the professional needs of teachers, understood as key indicators for the redesign of the next three-year training program. The research design involves teachers who hosted and supported student teachers during their internship project, former student teachers, and current student teachers, and develops through three levels of data collection: Investigating conceptions and practices related to L2L, and thus the persistence of professional learning over time, through an ad hoc long-term questionnaire (closed and open-ended questions) administered to cohorts from 2021/22 to 2024/25; Examining the relationship between the training received and enacted practices, with particular attention to implementation difficulties, through a final ad hoc questionnaire (including closed and open-ended questions) addressed to the 2024/25 and 2025/26 cohorts; Interpreting emerging professional development needs and contextual constraints through qualitative in-depth exploration based on focus groups conducted with mentor teachers and student teachers. The results aim to contribute to the debate on competence-oriented teaching focused on Learning to Learn in preschool and primary school, highlighting which training devices and methodological approaches can effectively support teachers in fostering students' autonomy and empowerment. In this perspective, the study discusses the conditions required for Learning to Learn to become a widespread democratic practice (Vainikainen, Hautamäki, 2022), rather than remaining confined to a purely theoretical dimension.

OBSERVING LEARNING TO LEARN IN HIGHER EDUCATION: PERCEIVED STUDY STRATEGY GAPS AND EDUCATIONAL SUPPORT IN INITIAL TEACHER EDUCATION

Sofia Torresani (Sapienza, University of Rome, Italy) · **Marianna Traversetti** (Sapienza, University of Rome)

Study method | University | Educational support

The "Learning to Learn" (L2L) competence, recognised as one of the key European competences for lifelong learning, is now considered strategic for fostering autonomy, educational equity, and active participation throughout one's life. International literature has highlighted its multidimensional nature, integrating cognitive, metacognitive, motivational, and socio-relational dimensions, whilst emphasising the difficulty of observing its developmental trajectory across different educational contexts (Stringher, 2021). Despite its centrality in European documents and in the learning outcomes of higher education (European Council, 2006, 2018), pedagogical support for this competence still appears patchy, particu-

larly during transitions between educational levels, where students are required to employ advanced self-direction strategies (Pellerey, 2006) without necessarily having received explicit training. This paper presents some findings from an exploratory study conducted within the Primary Teacher Education Course at Sapienza University of Rome, aimed at investigating students' perceptions of study strategies (Traversetti, 2017) as an observable dimension of L2L in the university context. The research assumes that the study method, understood not as a technical repertoire but as a strategic competence capable of integrating the planning, monitoring, and regulation of learning processes, constitutes one of the most significant operational expressions of L2L in academic contexts. Data were collected using the Strategic Skills Perception Questionnaire (QPSS) (Bay et al., 2010), administered to 157 students across the five years of the degree programme. The descriptive results show that 56.1% of participants stated that they had never participated in their previous educational experience in activities explicitly dedicated to study methods, whilst over 70% perceived the need to develop new strategies to tackle university study effectively. These data suggest that the development of strategic learning competence remains largely implicit and discontinuous across different educational levels, relying more on individual processes of adaptation than on intentional forms of pedagogical mediation. Particularly significant is the perception that university study requires not only a greater quantitative investment of effort, but a qualitative reorganisation of learning practices, especially in relation to time management, self-monitoring, and strategic flexibility (Rizzo & Traversetti, 2024). From this perspective, the transition to higher education emerges as a critical juncture for observing latent vulnerabilities in the developmental trajectory of 'Learning to Learn' (Hautamäki et al., 2022). Based on these perceived needs, a laboratory-based intervention was designed and launched, focusing on the organisation of study time and metacognitive reflection, through small-group activities, guided exercises, peer discussion, and critical debate. The educational framework draws on active pedagogical traditions that conceive the laboratory as a space for reflection on action and the transfer of learning (Dewey, 1938; Le Boterf, 2000), making the strategic processes involved in learning explicit and shareable. The case of initial teacher training is particularly relevant, as supporting the strategic competence of future teachers can also influence future educational practices in school settings. The paper, therefore, reflects on the need to strengthen vertical continuity between schools and universities, so that 'Learning to Learn' does not remain an implicit and unevenly distributed competence, accessible mainly through individual resources rather than through a deliberate and equitable educational project.

Nonviolent Education and Demilitarization of Schools: Practices, Tools, and Pedagogical Perspectives Towards Universalist Humanism

PANEL CONVENORS: Annabella Coiro (rete Edumana, Italy); Chiarlie Barnao (Università di Palermo); Federica Zanetti (Università di Bologna)

PANEL KEYWORDS: Peace, nonviolent education, school demilitarization

The need to rethink education as a tool for peace, social justice, and democracy is widely recognized internationally (UNESCO, 2023; UN, 2015), yet there are differing conceptions of "peace." Rethinking peace in education requires moving beyond a reductive notion of peace as the mere absence of war toward an active, positive perspective (Galtung, 2014). Educating through nonviolence involves interrogating not only content but also educational processes, as well as the physical and symbolic environment. Learning occurs within relationships and demands adults capable of embodying democratic and nonviolent values (hooks, 1994; Freire, 2004). Building a school that rejects violence requires recognizing and dismantling punitive, competitive, and hierarchical logics persisting in educational practices, often silently and as normalized routines (Dolci, 1987). In a context of rapid transformations and increasing militarization of educational and social imaginaries, it is urgent to reflect on the risks these dynamics pose for human development. Promoting nonviolent education calls for a multidimensional approach. Personally, teachers' self-work is crucial; interpersonally, maieutic methods and shared decision-making foster communities of inquiry; socially, a nonviolent school carries inherently political significance, countering exclusionary structures and nurturing democratic experience (Dewey, 1916). The panel welcomes contributions examining how school practices and policies can advance nonviolence and demilitarization of educational imaginaries—for instance reorganization of spaces and times, non-punitive assessment, participatory structures, relational literacy, local educational networks. The aim is to contribute to the development of theoretical frameworks, pedagogical tools, and policy proposals sustaining systemic transformation consistent with a planetary humanism (Morin, 2022) and universalism (Silo, 1991).

REOPENING HISTORY: CAPITINI'S INTERGENERATIONAL ANTIFASCISM AND NONVIOLENT PEDAGOGY FOR DEMOCRATIC CIVIC EDUCATION

Gabriella Falcicchio (University of Bari Aldo Moro, Italy) · **Daniele Taurino** (University of Bari Aldo Moro, Italy)

antifascism | nonviolence | education

This contribution re-reads Aldo Capitini's Antifascismo tra i giovani through the interpretive frame offered by the recent editorial re-publication, which presents antifascism as an open-ended process rather than as a closed chapter of national memory. In this perspective, antifascism is not reduced to commemorative rhetoric: it is treated as a formative and political practice that can still address young people because it connects ideas, biographies, places, and collective relations, and because it links resistance to the principles and methods of nonviolence. The paper develops three pedagogical cores that emerge from this reading. First, the intergenerational character of antifascism: the text is configured as a network of encounters, voices, and itineraries that can be re-activated as an educational device, especially where school curricula risk isolating the history of fascism within linear and self-contained narratives. Secondly, the Capitinian lexicon of "openness" (apertura) and "Thou" (Tu): Capitini's insistence on practice/attention, dialogue, care for relationships, and refusal of "heads" (charismatic cults and hierarchical leadership) provides criteria for democratic education beyond moral exhortation and offers an antidote to what Eco has described as the re-emergent potential of "eternal fascism." Third, the horizon of "all" (tutti) and "copresence" (compresenza) as a regulative idea for civic learning: democratic formation is interpreted as an exercise in expanding the community of reference and building relational infrastructures that make meaningful participation possible. On this basis, the contribution specifies a didactic and organizational proposal explicitly aligned with the panel's focus on nonviolent education and the demilitarization of schools, understood as the dismantling of punitive, competitive, and hierarchical logics that are often normalized in everyday routines, and as a reorientation of school environments (physical, symbolic, and relational) towards active, positive peace. The proposal translates Capitini's intergenerational antifascism into a set of practices and tools that work simultaneously on (i) teachers' "self-work" and professional habitus, (ii) classroom and school governance as a democratic laboratory, and (iii) the wider local educational ecosystem. The aim is to propose Capitini's intergenerational, nonviolent antifascism as a resource for renewing civic education: not as an additional content block, but as a method for cultivating democratic agency, critical vigilance toward authoritarian drifts, and a disciplined capacity for conflict transformation.

NON-COLLABORATION WITH WAR AS PEDAGOGICAL PRAXIS: ALDO CAPITINI'S NONVIOLENT FRAMEWORK FOR PEACE AND DISARMAMENT

Emanuele Follenti (Liceo Scientifico Lorenzo Respighi, Piacenza, Italy)

Capitini | nonviolence | school

Demilitarising schools entails more than adding "peace content": it calls for educational frameworks that interrupt collaboration (i.e., non-cooperation) with war as a social system. This paper focuses on Aldo Capitini's principle of non-collaboration: refusal to participate in war-making, withdrawal of consent from militarised institutions, and construction of participatory alternatives (1,2,3). In this sense, it proposes a pedagogical praxis for cultural disarmament within everyday schooling. In a time of securitised borders and renewed war economies, non-collaboration functions as a method for unlearning enemy-making and for cultivating a universalist humanism grounded in the "tu-tutti" (10). Aldo Capitini (1899–1968) was an Italian philosopher and educator who made nonviolence a central category of political action and educational renewal. He promoted a democracy "from below" and experimented with participatory forms of public deliberation, linking ethical transformation to collective organisation with his Movimento Nonviolento. The study combines a historical-educational reconstruction of the 1963 International Seminar on Nonviolent Techniques (Perugia) with a conceptual analysis of Capitini's later systematisation in Le tecniche della nonviolenza (1967) (4,5,6). The seminar is interpreted as a critical junction between educational theory and grassroots associative politics, translating "power from below" into learnable practices: civil disobedience, conscientious objection, economic non-cooperation (including boycotts) and strategies of progressive disarmament. The paper also frames peace as an active sequence of social acts rather than the mere absence of violence. From this perspective, demilitarisation acquires a clear pedagogical meaning for schools, as it entails a comprehensive transformation of governance, curriculum, and symbolic culture within educational institutions. The paper outlines pathways for mapping how militarisation enters educational spaces and for developing curricular inquiry in civic and historical education, through participatory inquiry into supply chains and public budgets. It also proposes collective practices of non-cooperation as educational exercises, including scrutinising procurement and sponsorship, declining military-led activities, and re-designing rituals and spaces in ways that cultivate inclusive forms of remembrance. Transnationally, Capitini and the Movimento Nonviolento were embedded in international pacifist circuits, such as the War Resisters' International, showing how training, educational resources, and anti-militarism campaigns circulate across borders and can be pedagogically adapted to schools today (6-7). From Capitini's 1963 Seminar to Le tecniche della nonviolenza (1967), contemporary anti-militarisation can reactivate non-collaboration as a pedagogical praxis of cultural disarmament, translating refusal and non-cooperation into learnable techniques. By tracing Capitini's influence across current Italian and European initiatives (11), the paper frames the school as a laboratory of active

nonviolence and grassroots democracy, where universalist humanism is enacted through democratised language, agency, and institutional power rather than abstract moralism (8,9). Educators and policymakers are invited to treat non-collaboration as curriculum, method, and institutional policy for demilitarising educational life.

ARCHIVES FOR PEACE: USING HISTORICAL SOURCES TO FOSTER NONVIOLENCE EDUCATION IN PRIMARY SCHOOLS

Pamela Giorgi (INDIRE) · **Rubina Bazzani** (INDIRE) · **Alberto Biondo** (Centro per lo sviluppo creativo Danilo Dolci) · **Tiziana Rita Morgante** (Centro per lo sviluppo creativo Danilo Dolci) · **Annabella Coiro** (Rete ED.UMA.NA.) · **Gabriella Fanara** (Rete ED.UMA.NA.)

Cultural heritage education | Learning ecosystems | Civic competence

This contribution presents a research and educational project exploring how archival materials can support peace and nonviolence education in primary schools. The initiative is grounded in the idea that archives —understood as repositories of collective memory and lived experiences— can function as powerful pedagogical tools within school-based learning ecosystems. By integrating archival sources into active, laboratory-based teaching, the project positions schools as community hubs capable of nurturing democratic values, critical thinking, and a culture of nonviolence. The project begins with a shared planning phase involving partner schools in Milan and Mirto, teachers, and researchers. This collaborative design process defines objectives, timelines, and thematic pathways, drawing on materials preserved in the Archive of the Centro per lo Sviluppo Creativo "Danilo Dolci," including photographs, posters, educational projects, and audio recordings. The initiative also builds on the methodological heritage of the EDUMANA network, which has long experimented with dialogic, participatory, and community-centered educational practices. The pedagogical framework is structured around a progressive introduction to archival literacy. Students first explore the concept of the archive as a place where real stories are preserved, engaging in guided conversations and reflective activities that connect personal memory to collective history. They then encounter the idea of historical sources through simplified document analysis, learning to observe, question, and interpret materials from the past. This approach emphasizes that documents do not simply "tell" stories but invite multiple readings depending on the observer's perspective. A central component of the project is the direct exploration of archival materials. When possible, classes visit the archive; alternatively, curated selections are brought into the classroom. Working in small groups, students analyze different documents and reconstruct "mini-stories," developing early research skills and experiencing firsthand the investigative dimension of historical inquiry. These activities culminate in creative reinterpretations: students write short narratives inspired by archival sources, dramatize scenes from the past, or create digital boards and multimedia artefacts that connect historical content to contemporary issues. The project explicitly links archival exploration to peace and nonviolence education. Through materials related to Danilo Dolci's work —civil disobedience, dialogic education, community development— students reflect on themes such as conflict resolution, empathy, justice, and civic responsibility. Classroom activities include listening circles, interviews, collective writing, and dramatizations, all grounded in Dolci's maieutic method. These practices encourage students to connect past experiences of nonviolent action with present-day challenges, fostering a sense of agency and shared responsibility. A final phase focuses on public dissemination, conceived as a miniature public history exercise. Schools

organize exhibitions showcasing documents, student interpretations, and multimedia productions, opening the learning process to families and the wider community. This moment reinforces the school's role as a civic center and cultural hub, promoting participation and intergenerational dialogue. The project concludes with an evaluation phase involving questionnaires, interviews, and focus groups to assess educational impact and inform future iterations. Overall, the project demonstrates how archives can become catalysts for democratic learning ecosystems, enabling schools to cultivate peace, nonviolence, and active citizenship through experiential, community-oriented pedagogy.

DISARMING EDUCATION: TRANSFORMATIVE PEDAGOGY, UNIVERSITY PUBLIC ENGAGEMENT, AND PRACTICES OF ACTIVE CITIZENSHIP

Federica Zanetti (University of Bologna, Italy)

Transformative pedagogy | Peace education | Active citizenship

Within contemporary debates on peace education, increasing attention has been devoted to the ways in which educational systems may contribute, often implicitly, to the reproduction of militarized social imaginaries. Beyond the most visible forms of militarization within educational spaces, these dynamics frequently operate through deeper pedagogical and cultural mechanisms: rigid hierarchies of knowledge, transmissive teaching models, competitive assessment regimes, and limited opportunities for students to participate in processes of knowledge production. Such institutional and symbolic configurations contribute to shaping an educational imaginary grounded in obedience, performativity, and the separation between academic knowledge and civic responsibility. Within international scholarship on peace education, it has been widely emphasized that education for peace cannot be reduced to the mere absence of violence, but must instead be understood as an active process aimed at cultivating democratic relationships, social justice, and the nonviolent transformation of conflicts. From this perspective, the demilitarization of education requires a profound transformation of pedagogical relations, epistemic practices, and institutional cultures that structure learning environments. This paper explores the potential of transformative pedagogy and university public engagement as strategies capable of "disarming" education from within. The theoretical framework draws on the tradition of critical and nonviolent pedagogies, including the work of Danilo Dolci, Paulo Freire, bell hooks, and Johan Galtung. In particular, Dolci's method of reciprocal maieutics offers a meaningful perspective for rethinking education as a dialogical and collective process of knowledge production, in which learning emerges through shared inquiry, active participation, and community responsibility rather than through hierarchical transmission. Building on this framework, the paper presents the educational experience of the university course Strategies and Tools for Empowerment and Active Citizenship, designed around participatory and transformative learning methodologies. The course integrates collaborative learning practices, project-based activities, and public engagement initiatives that connect academic work with social actors and local communities. Through these practices, students are involved in processes of critical reflection and civic action that transform them from passive recipients of knowledge into active participants in the production of knowledge and social practices. The analysis of this experience suggests that the integration of transformative pedagogy and public engagement can contribute to redefining the role of the university as a democratic public learning space. These practices foster critical awareness, collective agency, and active citizenship competencies while simultaneously challenging traditional epistemic hierarchies through processes of knowledge co-production among students, educators, and community actors. From this perspective, the demilitarization of educational imaginaries cannot be understood simply as the absence of militarized elements within educational

settings. Rather, it entails a deeper transformation of pedagogical relationships and knowledge practices that sustain authoritarian and exclusionary dynamics. Through dialogical learning, collaborative inquiry, and civic engagement, transformative pedagogy can help reposition the university as a site where democratic participation and social responsibility are actively cultivated. Revisiting the tradition of nonviolent education in light of contemporary practices of university public engagement thus opens pathways for imagining pedagogical processes capable of disarming education from within and reinforcing its emancipatory and democratic potential.

FOSTERING PEACE AND NONVIOLENCE THROUGH SCHOOL-COMMUNITY PARTNERSHIPS: A CASE STUDY OF BEST PRACTICES.

Tiziana Landra (Energia per i diritti umani, Italy) · **Dino Mancarella** (Mondo senza guerre e senza violenza)

educational partnership | nonviolence | universalist humanism

The link between schools and their local territory, strengthened by school autonomy (DPR 275/99), transforms the school institution into a central node within the community, integrating educational activities with local resources, associations, and institutions. This strategic alliance promotes territorial educational agreements, pathways for transversal skills and career guidance (PCTO), and interventions in at-risk areas, with the school acting as a cultural and legal safeguard. Within this framework, the school institution is no longer an isolated entity but rather a center for the dissemination of civic values, capable of co-designing effective educational responses to social fragmentation, promoting active citizenship rooted in local realities while opening up to global perspectives. This contribution aims to present an educational project based on the interaction between the school system and the world of civic associations, as an example of good practice. The intervention was carried out over the course of two academic years at the Istituto Comprensivo Puddu in Prato and developed within the framework of the Scuole in Marcia project (www.scuoleinmarcia.it), a platform of educational activities linked to the Third World March for Peace and Nonviolence (https://theworldmarch.org/it/), aimed at promoting knowledge, dissemination, and the practical application of such values. The activities put forward by Scuole in Marcia are characterized by a flexible model that, in this specific case, proved particularly suitable for fostering: students' protagonism. In this perspective, learners are not minds to be filled with notions, but become agents of change; the co-design of activities by teachers, ensuring their continuity over time; opportunities for students to engage in meaningful experiences "which they will live through fruitfully and creatively in subsequent experiences" (Dewey, 2014, p. 14). Students' sense of agency in addressing the complexity of situations that may arise in a constantly changing world was stimulated through an educational approach centered on nurturing futuring—the capacity to imagine the future in a critical and reflective way (Hoffman et al., 2021). While the presence of an external voice —in this case non-profit volunteers—can be stimulating because of its novelty, as well as the content and methodologies employed, it is essential, for greater effectiveness, that such interventions activate teachers in continuing the activities and provide students with spaces not only for understanding but also for concrete action. The relationship established through this pedagogical partnership becomes an alliance among teachers, experts, and students. Since nonviolence, from the perspective of Universalist Humanism as advanced by Mario Rodríguez Cobos, can only be understood through a dual framework—both social and personal (Silo, 1991)—another central aspect of the Scuole in Marcia project consisted in dedicating substantial space within workshop-based learning to recognizing the origins and dynamics of subtle forms of violence in interpersonal relationships, within the classroom group, and in the broader school environment, with the aim of overcoming them. This need is widely perceived and strongly felt by teachers in contemporary schools. In this regard as well, positive outcomes could be observed in the creation of spaces that fostered reflection, expression, listening, and mutual respect.

AUTOBIOGRAPHY: A DEVICE AT THE SERVICE OF PEACE AND NONVIOLENCE

Dino Mancarella (Mondo senza guerre, Italy) · **Caterina Benelli** (Università degli Studi di Firenze)

Autobiography | nonviolence education | Teacher Professional Development

The present moment is characterized by increasingly rapid and unpredictable change. The world is dominated by the extreme, the unknown, and the highly improbable (according to current human knowledge); this unpredictability will continue to grow despite the expansion of knowledge, as both scientists and non-scientists are led to observe details rather than the "big picture" and the dynamism of processes (Morin, 1999; Taleb, 2008). In this context, the individual lives a "Liquid Life" (Bauman, 2008)—a precarious existence lived under conditions of continuous uncertainty, marked by a sense of powerlessness in the face of dizzying changes. Insecurity thus becomes a permanent condition in which "anything may happen, but nothing can be done—or almost nothing [...]" (Bauman, 2017, p. 127). This instability is fueled by permanent conflict and the growth of global violence. Clashes are often reduced to identity simplifications that flatten human complexity into a single affiliation, fueling a violence that denies the plurality of individual stories (Sen, 2006). Today, neoliberalism has transformed governance into a legitimization of war, surveillance, and terror; a spirit of revenge and a "culture of cruelty" permeate daily life. To design a more just and equitable horizon for government and the economy, one must consider a simultaneous transformation of culture, consciousness, social identities, and values (Giroux, 2014). This research presents a reflection on the workshop "The Autobiographical Diary for Peace and Nonviolence" organized by the CRED (Educational and Didactic Resource Center) for teachers and educators operating within the "0-6 integrated system" and in schools of all levels in the Valdera area. The workshop, consisting of two meetings attended by over 50 people, was proposed as a response to transform the social situation described above. Its core was the autobiographical device, a practice with transformative and educational potential that allows for the creation of reflective spaces for self-care (Demetrio, 1996). Autobiography, indeed, offers participants the opportunity to increase self-awareness of their own needs and engage in deep listening—to themselves and others—to recognize and interpret different points of view (Benelli & Tozza, 2024). In line with this description, the workshop utilized autobiography—focused on themes of peace and nonviolence—to allow individuals to reclaim their own history and reflect on the complexity of their existence. Through the analysis of feedback questionnaires, it emerged how working on one's own memory and biographical events allowed for the identification of different forms of violence (The Community for Human Development, 2010) and the dismantling of the "logic of the enemy" inherent in this society. The ultimate goal is to contribute to the development of theoretical frameworks and pedagogical tools that support a systemic transformation consistent with a universalist (Silo, 2000) and planetary humanism (Morin, 2001). Replacing the logic of confrontation with the practice of listening and self-narration means laying the foundation for a consciousness and a culture where the resolution of differences occurs not through the destruction of the other, but through reconciliation and the recognition of common vulnerability and human dignity.

PEACE EDUCATION IN THE DISCOURSE OF EDUCATION POLICY OF LITHUANIA

Vidmantas Tūtlys (Vytautas Magnus University, Lithuania) · **Povilas Dievaitis** (S. Ignacius of Loyola College, Lithuania)

Peace education | general education | education policy

Peace education serves as important instrument in seeking to establish and maintain peace in the turbulent geopolitical context exacerbated by the wars: hybrid and real, cold and hot. The value of peace education is explored and promoted by many distinguished educators and education policy makers, recognizing fundamental role of education in facilitating internalisation of the peace values, as well as provision of knowledge, skills and attitudes needed for the peaceful co-existence of people and nations (Riccardi 2023, 2025; Cesari, 2023; Affinati, 2025; Vanner, 2022). Peace education faces particular challenges and difficulties in the regions experiencing military conflicts and geopolitical tensions (Zebich-Knos et al., 2020). This paper seeks to explore the reflection of peace values in the education policy of Lithuania, as country located in the Central and Eastern Europe - region besieged by the geopolitical tensions and the Russo-Ukrainian war. There are explored the following research questions: 1) How are the ideas of peace value and peace education accepted in the design of curricula of general education in the conditions of geopolitical tensions and Russo-Ukrainian war? 2) How are the peace values intregrated with or expulsed by the trends of strengthening the discourses of national and civil security and defense in the general education curricula? 3) What are the specificities of the attitudes of education policy making and curriculum design to peace education in Lithuania in comparison to the treatment of peace education in the education policies and general education curriculum design in the most peaceful countries of the world? The research will be guided by Galtung's theory of peace (1996), as well as Harris (2007) approach to peace education. The primary research method is qualitative document analysis, complemented by reflexive thematic analysis, which will help to disclose the patterns of treating the peace value in the education policy and practices. The discourse of peace value in the education policy and practice in Lithuania is analysed in comparison to the peace values ranking in the education policies of world's most peaceful countries (Iceland, Denmark, Ireland, New Zealand, Austria, and Singapore). The research involves content analysis of the education policy douments, including national education strategies, curricula, governmental guidelines. These findings are complemented with the interviews with the reprentatives of the responsible ministries, governmental agencies responsible for the general education curriculum policy, and general education teachers. The identified themes are interpreted to reveal the representation of peace values in the educational curricula.

MAPPING CHANGES: THE THEATRE OF THE OPPRESSED AS A TRANSFORMATIVE AND EMERGENT PRACTICE IN A NONVIOLENT TRAINING PATHWAY.

Maria Sangaletti (University of Bergamo, Italy) · **Agnese Graticola** (University of Bergamo, Italy)

Nonviolent education | Theatre of the Oppressed | Critical awareness

In 2023, UNESCO called upon educational organisations and professionals to take concrete steps towards fostering a culture of peace. "Learning Peace" embodies a community's commitment grounded in faith and hope in the collective pursuit of positive peace, serving as a laboratory for training, education and growth in the fields of peace and nonviolence.

Using a case study in which the Theatre of the Oppressed – a political and pedagogical practice developed by Augusto Boal to promote critical awareness and empower communities – was introduced as a transformative educational tool within "Imparare la pace. Scuola popolare di nonviolenza" in Bergamo, this study seeks to document, understand and map the transformative processes that emerged. The Theatre of the Oppressed is presented as a politico-pedagogical practice aimed at fostering critical consciousness and the activation of oppressed subjects through the experiential, rather than ideological, recognition of conflict and oppression. Through the analysis of rituals and mechanisms of domination, thereby revealing their underlying power dynamics. The process generates dialogical maieutic pathways that encourage the collaborative search for shared solutions, which cannot be predefined or externally controlled. It produces multiple levels of impact on participants, ranging from awareness to transformation, and from the personal dimension to the social and community sphere (Boal 1994, 1996). Grounded in a complex and ecological epistemological framework, the study draws on critical pedagogy (Giroux, 2008), transformative learning theory (Mezirow, 2003), democratic education (Dewey, 2018), and systemic-complex thought (Morin, 2007; Bateson, 1977). It adopts a qualitative-interpretative case study design, integrating elements of educational ethnography, narrative inquiry and maieutic methods to analyse the aims and needs that motivated the introduction of the Theatre of the Oppressed within the programme; the cognitive, emotional, embodied, relational and political transformations that participants recognise as outcomes of the experience; and the emerging or unforeseen dynamics and tensions. In conclusion, the study seeks to highlight the significance of the Theatre of the Oppressed within a Scuola popolare di nonviolenza as a practice that nurtures adults able to embody democratic and nonviolent values (hooks, 2020; Freire, 2008).

RETURNING RESEARCH FINDINGS IN SCHOOL-BASED PSYCHOLOGICAL RESEARCH: PARTICIPATORY AND GENERATIVE PRACTICES

Lucia Irene Porzio (Università degli Studi di Napoli Federico II) · **Jacopo Postiglione** (Università degli Studi di Napoli Federico II) · **Filomena Carillo** (Università degli Studi di Napoli Federico II) · **Elisabetta Fenizia** (Università degli Studi di Napoli Federico II) · **Andrea Baroncelli** (Università degli Studi di Perugia) · **Enrica Ciucci** (Università degli Studi di Firenze) · **Valentina Grazia** (Università degli Studi di Parma) · **Ilaria Grazzani** (Università degli Studi di Milano Bicocca) · **Santa Parrello** (Università degli Studi di Napoli Federico II)

returning findings | partecipatory practices | school psychology

In psychological research, national and international ethical guidelines emphasize the importance of returning research findings as an integral part of the researcher's responsibility to participants. The American Psychological Association (APA, 2017) states that researchers should consider returning results as part of the informed consent process and their ethical responsibility (Standard 8.10). Similarly, the National Board of Italian Psychologists Code of Ethics for the Psychologist (CNOP, 2018) recommends ensuring transparency and respect toward participants, promoting practices that encourage informed participation. However, in the field of educational psychology, the return of findings to teachers remains relatively uncommon, often resulting in research models that limit transparency and active participation, reinforcing the idea of an asymmetry of power between psychologist-researchers and teachers (Fine, 1994; Minkler & Wallerstein, 2008). Conversely, the literature highlights how the feedback process can recognize the active role of participants, enhance trust, promote epistemic justice, and acknowledge the value of collectively produced knowledge (Mertens, 2009; Israel et al., 2013; Fricker, 2007). It is not merely a matter of protecting participants' rights, but of ensuring that research becomes generative of all possible results, allowing actors to contribute fairly, beginning with the

community that made the research possible (Paglieri, 2021). In particular, the school context requires spaces and time in which adults can enact democratic and nonviolent values (Freire, 2004). Within the research project "Mapping Social Emotional Learning and School Climate in Italian Lower Secondary Schools: advancing understanding and participation to inform intervention" conducted under the PRIN Call 2022 PNRR, quantitative and qualitative findings were shared directly with the teachers of the 36 Italian schools involved in the project. The feedback sessions were designed following an approach inspired by Teacher Participatory Action Research (T-PAR), which enables researchers to focus on teacher involvement, reflective practices, and the contextualized return of results (McNiff & Whitehead, 2002). Several studies also underline that T-PAR is closely intertwined with the personal and professional growth of teachers (Efron, 2013). The outcomes of the participatory restitution process have been collected in a "Guide of good practices", entitled "Cultivating well-being at school" published on the www.perstarebeneascuola.com website. It is a collection of suggestions for lower secondary school, developed by teachers for teachers and structured around different areas by the research unit. The sections are organized into three parts: student-teacher relationship, positive teaching, student support, classroom management, respect for rules, teacher-teacher relationship, student-student relationship, justice, involvement, encouragement, social awareness and student self-awareness. Each section is divided into in-class activities, out-of-class activities, and interaction strategies, which outlines approaches teachers may adopt to foster trust and collaboration. The present contribution therefore aims to highlight the importance of the generative return of research results as a methodological practice relevant for research in school psychology, consistent with the principles of nonviolent education and the demilitarization of educational imaginaries. From this perspective, returning research data becomes an opportunity to build relationships of trust and dialogue, also between school psychologists and teachers, to generate further knowledge that supports the development of schools as spaces of authentic democracy.

FROM RIGID IDENTITY TO NARRATIVE IDENTITY - NONVIOLENT EDUCATION AS A CONDITION FOR RECONCILIATION

Vito Correddu (Centro Studi Umanista Salvatore Puledda, Italy)

narrative identity | nonviolent education | reconciliation

Abstract This purely theoretical article argues that the transition from a culture of revenge to a culture of reconciliation is not primarily a moral or legal issue, but a matter of identity formation and therefore an educational one. If the drive for revenge originates in a subjectivity in which the self is conceived as a fixed substance that must be defended against any disturbance, then overcoming violence requires transforming the conditions in which subjects are formed. The central claim is that non-violent education, understood as a pedagogy shaping a different modality of selfhood, is the decisive condition for reconciliation. The argument is developed through a convergence of two complementary perspectives that approach the same problem from different angles. Paul Ricoeur's phenomenological analysis of personal identity (Oneself as Another, 1992) distinguishes between two modalities of selfhood. Idem-identity — perfect identity and permanence of a substance over time — defines a self whose coherence depends on rigidity: any rupture threatens its very existence. Ipse-identity, on the contrary, is a narrative identity defined by fidelity to oneself through change: a self capable of incorporating conflict and encounter with the other without being destroyed. The self of ipse is not a fortress to defend but a story to tell and a word to keep. Francesco Remotti's anthropological critique (Contro l'identità, 1996; L'ossessione

identitaria, 2010) approaches the same structure from a cultural standpoint: the obsessive attachment to a fixed, self-identical subject — the "individual" as in-dividuus — is not a universal given but a historical construction of Western culture, one that generates a structural inability to coexist with otherness. Remotti's counter-concept of the condividuo — the subject constituted through sharing and mutual recognition rather than exclusion — reveals that what we call "identity" is always already a relational process. The idem-structure that Ricoeur describes phenomenologically is thus what Remotti diagnoses culturally. Both converge in showing that rigid identity sustains the logic of violence. Yet neither perspective addresses the conditions under which the transition from idem to ipse — from the individual to the condividuo — can actually take place. This is the gap that the present article seeks to fill. It contends that militarised pedagogies (Galtung, 1969, 1990) — broadly understood as systems structured around competition and conformity — systematically produce idem-subjects or rigid identities predisposed to violence and incapable of democratic coexistence. In contrast, nonviolent education, conceived from a universalist humanist perspective, operates as a pedagogy of narrative identity oriented towards a shared future horizon: the construction of a Universal Human Nation (Silo, 1989). It is in this dimension of futurity, and not in the conservative defence of the past, that subjects capable of navigating conflict without resorting to retaliation are formed, recognising the other as a constitutive dimension of their own narrative. The demilitarisation of schools therefore appears not as mere institutional reform but as the fundamental political act through which a society decides whether reconciliation and authentic democratic coexistence will be possible.

PEDAGOGY OF NONVIOLENCE BETWEEN THEORY AND PRACTICE: THE SIGNIFICANCE OF "ENERGIA PER I DIRITTI UMANI"

Vittoria Suriano (Energia per i Diritti Umani aps, Italy) · **Francesca De Vito** (Energia per i Diritti Umani aps, Italy) · **Mirko Vecchiarelli** (Sapienza University of Rome, Italy)

Nonviolence | Universalist Humanism | Pedagogy of Intentionality

This paper offers a theoretical and empirical reflection on nonviolent education, drawing on documentary analysis and qualitative research based on participant observation and the systematization of project materials developed by the association Energia per i Diritti Umani(EDU) in schools in Rome. These practices are examined as situated pedagogical practices, framed within the perspective of universalist humanism(Silo,1991), which conceives personal transformation and social transformation as inseparable processes. The theoretical framework highlights that violence is not a biological destiny(UNESCO,1991) but rather a culturally and structurally constructed phenomenon(Galtung,2008). From this perspective, nonviolence is understood both as a method of action and as a relational approach grounded in coherence between intrapsychic and social dimensions—namely, coherence among thinking, feeling, and acting, and treating others as one would wish to be treated(Tato & Serfaty,2008). A key distinction is drawn between aggression, understood as a vital energy associated with self-assertion, and violence, its destructive and culturally codified expression(Oliverio Ferraris,2013). Within this framework, anger is not simply repressed but recognized and transformed into a generative force for change(Rosenberg,2006), capable of "extinguishing the fire"(Nhat Hanh,2022) while preserving its transformative potential, in continuity with Gandhi's conception of nonviolence as an active social force(Gandhi,2017). If violence is a learned behavior, institutional education represents a primary context in which such learning can either be reinforced or reoriented. Schools can be understood as multidimensional environments in which symbolic, competitive, evaluative, and

relational forms of violence are often reproduced, embedded within disciplinary, hierarchical, and punitive logics that contribute to a broader cultural militarization of educational settings(Barnao,2024). Nonviolent education offers a way to counter these dynamics by transforming relational patterns, evaluative practices, and conflict management strategies toward dialogical, cooperative, and inclusive models(Coiro,2024). Within this perspective, Ubuntu pedagogy(Blackwood,2025)—summarized in the expression "I am because we are"—reframes the school as a space of interdependence and shared responsibility, while Dewey's experiential and democratic pedagogy(Dewey,1938) situates these practices within a vision of learning grounded in reflective action and active participation. In this framework, nonviolence is not conceived as a normative prescription but as a situated practice learned through cooperation, participation, and critical engagement with conflict. The pedagogy of intentionality(Aguilar & Bize,2018) further reinforces this transformative orientation by enabling individuals to act intentionally within social reality. This paper analyzes the experience of EDU—active in Italy, Senegal, and India—in outlining a model of nonviolent pedagogy capable of fostering the cultural and symbolic demilitarization of educational contexts. Through the analysis of emotional literacy activities, experiential workshops, and participatory initiatives such as the Library of Nonviolence, the study highlights the generative and holistic nature of the association's educational approach. This model operates across three interconnected levels: the personal level(emotional awareness and the transformation of anger), the interpersonal level(active listening, mediation, cooperation, and dialogue), and the collective level(the construction of educational communities). Finally, the study emphasizes the importance of systemic networks—from the Universal Civil Service to initiatives such as EDUMANA—identifying collaboration among local actors and volunteers as a key driver in fostering a supportive and socially aware society grounded in Patfoort's(2013) principle of equivalence.

NONVIOLENT TEACHER TRAINING: A NARRATIVE REVIEW

Agnese Graticola (Università degli Studi di Bergamo, Italy)

Teacher training | Nonviolent education | Transformative learning

This study aims to explore how methods of active Nonviolence ca be merged in teacher training programmes to enhance the relational climate, teacher-student relationship and professional interactions in schools. Several studies suggest that positive relationships are predictors of teacher wellbeing, educational innovation and student learning outcomes. Nevertheless, managing relationships among students, colleagues and parents is one of the prevalent critical issues. Purposeful, non-occasional training in the development of interpersonal and communication skills and the integration of active nonviolent strategies into professional practice can enhance teachers' expertise and improve the quality of relationships in school environment. Nonviolence is a direct action that positions itself as an alternative paradigm to violence, a term endowed with an autonomous, positive and active value, distinctly different from denying or opposing violence (Capitini, 2024; Muller, 2004). Nonacceptance of reality is much more than passive acquiescence; it represents deliberate political and educational action aimed at fostering a culture of peace. Nonviolence implies a unity of theoretical reflection, educational practice and professional self-reflection. Education for nonviolence is enacted daily in the classroom, but it

also requires nonviolence in education itself: disarming language and glance towards oneself and others, recognising stereotypes and epistemic and cultural biases, resisting the normalization of logics of domination, judgment, performance and competition. In interdependence, every participant in the school system may be regarded as co-responsible for the entire community, contributing to the construction of a planetary humanism (Morin, 2015). Through a narrative review of the scientific literature, designed in accordance with the SANRA (Scale for the Assessment of Narrative Reviews) guidelines (Baethge et al., 2019), this paper aims to investigate the ways in which theoretical-practical model of Nonviolence has been applied in teacher training, the tools, the transformations documented and the recommendations suggested in the reviewed studies. The objective is to highlight how nonviolent practices and tools - such as Nonviolent Communication (Rosenberg, 2017), dialogic practices (Dolci, 2012), Theatre of the Oppressed, restorative methods, conflict transformation strategies (Patfoort, 2014) and Communities of Inquiry (Manara, 2011) - are helpful for repositioning educational action within the framework of Nonviolence. This approachstrengthens the quality of the alliance between students, families and teachers, and facilitates the design of systematic training pathways that enable the practical application of tools for deconstructing structural and cultural violence (Galtung, 2011).

NONVIOLENCE AS A PUBLIC AND POLITICAL CATEGORY OF EDUCATION: COLLECTIVE REFLECTIONS

Annabella Coiro (rete EDUMANA, Italy)

Nonviolent education | peacebuilding | educational practices

This contribution presents an exploratory study aimed at reflecting on the role of nonviolence as a public and political category of education within school institutions. Nonviolent education is considered a fundamental dimension for peace education (UNESCO, 2023) and for the sustenance of a democratic society. The objective is to examine the pedagogical and organizational conditions through which nonviolence can be adopted as a structuring principle of the School (Primary and Secondary), fostering the implementation of nonviolent educational practices. This work is part of an ongoing process developed through facilitated meetings, communities of practice, and reflective groups across various schools and educational settings, involving the active participation of the adult school community—teachers, principals, administrative staff, parents, and educators—in dialogue with the National 'Forum Scuole per un'Educazione Nonviolenta' and the Scuola Sconfinata movement. The materials produced, consisting of shared notes and syntheses, are currently undergoing qualitative analysis to identify preliminary interpretive categories and strategic pathways for adopting nonviolent educational practices in schools. Two primary research questions guide the reflection: how nonviolence can be transformed into a public category of education, and which practices and processes facilitate the adoption of nonviolent education within school institutions. The study is structured around working groups addressing active, cooperative, and participatory didactic approaches (Dolci, 1987); the revision of knowledge through cooperative and demilitarized lenses alongside the structuring of shared decision-making spaces (Freire, 2011); nonviolent conflict transformation and restorative practices (Galtung, 2000; Patfoort, 2013); the care and self-awareness of educating adults (hooks, 2020); and school organization as a context for dialogue, participation, and peace. Preliminary findings highlight several interpretive categories, including the semantic ambivalence of the concepts of peace and nonviolence, the centrality of adult relationships, the inconsistency between the explicit and implicit curriculum, and the necessity for shared decision-making spaces. These initial

observations help delineate working hypotheses for nonviolent educational practices and peace promotion, providing conceptual and organizational tools to transform the school into a participatory, co-responsible environment oriented toward holistic human development (Silo, 1994). Ultimately, adopting nonviolent education as an essential component of human development requires rethinking the school as a context dedicated to the well-being and flourishing of children, youth, and the educating adults alike.

Citizenship, Social Justice and Playful Learning for Economic Awareness and Social Change

PANEL CONVENORS: Liliana Silva (University of Modena and Reggio Emilia, Italy); Ennio Bilancini (Imt -Scuola Alti Studi – Lucca, Italy); Leonardo Boncinelli (University of Firenze, Italy)

PANEL KEYWORDS: Play, Economy awareness, Social change

The session investigates the nexus between democratic education and awareness of socio-economic systems, emphasising play as a pedagogical tool. It examines how economic, digital, and environmental transformations shape civic participation, social justice, and sustainability, exploring the role of play in their understanding. Key phenomena include economic literacy, socio-ecological interdependencies, prosocial behaviour, and the reduction of inequalities. The session also considers how play-based interventions, both digital and analogue, individual and collaborative, can support awareness of complex dynamics and collective responsibility. This session aims to foster a critical, interdisciplinary discussion on the educational potential of play in cultivating economic awareness, democratic participation, and socio-emotional competencies. The panel illustrates how play can encourage sustainable behaviours, informed decision-making, and openness to diversity, supporting the development of citizens able to navigate complex economic and digital environments. It further explores how play-based practices, when integrated into school and community programmes, enhance engagement, motivation, and learner self-efficacy. The panel is situated within an interdisciplinary field bridging education, social sciences, behavioural economics, psychology, game studies, game design research, and educational technology, following Dewey's view of schools as agents of social change (Dewey, 1961). Its scientific relevance lies in analysing how methodologies based on play support prosocial development, deepen understanding of economic structures, and encourage sustainable practices (Di Paolo et al., 2024). By integrating theoretical frameworks with empirical findings and transformative social innovation (Avelino et al., 2017), the panel advances understanding of how play-based learning environments become spaces that foster democratic participation, critical thinking, and social justice.

ENHANCING FINANCIAL LITERACY THROUGH BOARD GAME-BASED LEARNING

Duccio Martelli (University of Perugia, Italy)

Financial literacy | Personal finance | Board game-based learning

The need to develop personal finance literacy is an increasingly important issue worldwide, especially in the wake of the latest financial shocks and geopolitical crises. The large majority of households do not possess the basic knowledge of financial concepts necessary to effectively manage their personal finances and achieve a lifetime of financial well-being. Financial literacy thus represents an essential life skill being able to reduce inequalities and to improve social justice. Despite the very large number of financial education initiatives promoted over the years both domestically and internationally, unfortunately recent evidence confirms the individuals' poor ability to manage their money, although some positive signs have emerged compared to the past. Considering the investments made to date and the attention given to the topic by governments and financial authorities worldwide, we would have expected a much greater growth in the

households' skills. The proposal aims to understand how to enhance the effectiveness of future financial education initiatives, which currently rely primarily on traditional learning methods, such as seminars. However, financial literacy is more than just understanding theoretical concepts and making practical decisions based on numbers and data. Personal finance, unlike other disciplines, requires not only technical knowledge, but also the ability to manage one's emotions, which often negatively impact on individuals' decision-making processes. In addition to that, in this domain it is unlikely that individuals have the chance to make the same decision several times; it is more common that a choice is made only once (or very few times) during the lifetime of the person, but that decision may produce its effects for one or two decades, or even more. A typical example is when an individual wants to buy a house and ask for a mortgage: signing a wrong contract lead that person to pay higher fees and interests over several years. For all of the above reasons, the methodologies used so far to teach the basics of personal finance to the general public may not be the most appropriate. Game-based learning instead, and more precisely board game-based learning, might be an effective alternative approach leading to a stronger increase in financial literacy worldwide. It has been proved in literature that this form of experiential learning through games encourages critical thinking, calculated risk-taking, and the exploration of unusual alternatives by providing an interactive and low-stakes environment for active participation. Playing games also develops participants' engagement, which is very useful to transfer knowledge, especially in domains that individuals perceive not to be very attractive and quite boring, like personal finance is thought to be. If properly used, games could represent a valuable tool for transferring basic financial skills to individuals, and thus to enhance households' financial literacy, not only in Italy, but also worldwide.

A PLACE TO BELONG: FOSTERING COMPUTER SCIENCE IDENTITY AND SOCIAL-EMOTIONAL COMPETENCIES THROUGH PLAY IN RURAL PRESCHOOLS

Lori Caudle (The University of Tennessee, Tennessee, United States) · **Cathy Grist** (Western Carolina University, North Carolina, United States) · **Hannah Thompson** (Texas A&M University, Texas, United States) · **Frances Harper** (The University of Tennessee, Tennessee, United States) · **Margaret Quinn** (Texas A&M University, Texas, United States)

preschool · play-based learning · computer science

Young children's access to play has decreased significantly due to mass adoption of scripted curricula, standardized testing, and a movement away from educational experiences centered on the development of the whole child (Miller & Almon, 2009). There is also an increased need to integrate computer science (CS) learning into preschool education, something that has been overlooked by most CS initiatives (Harper et al., 2024; Smith, 2016). This presentation will focus on how play experiences implemented through PlayBots provided opportunities for rural preschoolers in the Southeastern United States to develop a sense of belonging in computer science (CS) while building social-emotional skills. PlayBots is a series of play-based experiences co-developed with educators to foster computational thinking, social-emotional competencies, and a sense of belonging in CS among young children. PlayBots embeds foundational computational thinking concepts (Bers, 2021) within unplugged and low-tech multimodal experiences (e.g., individual and cooperative play, culminating activities, project work, small group instruction, read-alouds, and daily routines). PlayBots evolved from a larger preschool computational thinking program built within a research-practice partnership funded by the National Science Foundation: Computer Science for All Program (see crraft.org; Harper et al. 2023, 2024) and is available online open access for early childhood educators. Over ten weeks, educators in six rural preschool classrooms spent time implementing and documenting PlayBots activities and experiences. In dramatic play, children acted like computer scientists as they developed play scenarios using real CS props to solve problems. Children chose different computer scientists identification badges of important STEM figures to wear as they engaged in work tasks. They used clipboards, paper, and writing

tools to represent their ideas. In the block center, children played Let's go Code!, using foam mats and large coding cards to build programs and move their bodies. They also explored the functions and capabilities of different robots (Bee-Bot, Robot Mouse, Code-a-Pillar, etc.), developed programs with coding cards, and constructed homes and mazes for robots with blocks and magnetic tiles. Throughout different spaces in the classrooms, children collaborated as they implemented the design process to build individual and shared robot prototypes from recyclables and loose parts (Nicholson, 1971, 1972). Children worked together to identify problems their robots could solve in the school or community. This presentation will highlight vignettes created through educators' documentation and video clips created through 360-degree camera recordings located in six preschool classrooms. These vignettes of children's interactions and engagement with CS-focused play materials demonstrate how integrating more intentional play-based learning and making thoughtful environmental adaptations to classroom spaces enhanced social-emotional learning and a sense of belonging in CS. Providing more play-based CS activities in rural preschools allows for more democratic participation in CS and play among young children, particularly those with limited or no access to CS education (Childs et al., 2024; Harper et al., 2024).

CAPITANAVIS: A RANDOMISED PILOT STUDY ON GAMIFICATION, BLOOD DONATION AWARENESS AND PRO-SOCIAL ATTITUDES IN PRIMARY SCHOOL CHILDREN

Cristiana Angelini (University of Florence, Italy) · **Ennio Bilancini** (IMT School for Advanced Studies Lucca, Italy) · **Roberto di Paolo** (University of Parma, Italy) · **Folco Panizza** (IMT School for Advanced Studies Lucca, Italy) · **Lina Rinaldi** (IMT School for Advanced Studies Lucca, Italy) · **Dario Menicagli** (University of Florence, Italy)

gamification · blood donation · prosocial behaviour

In Italy, blood and plasma donation occurs exclusively on a voluntary and unpaid basis; however, the donor population is ageing and generational renewal remains insufficient (ISS - Centro Nazionale Sangue, 2023). New donors under 50 are less likely to continue donating in the months following their first donation (Bilancini et al., 2022), making early-stage awareness initiatives particularly valuable. Volunteering and donation represent concrete expressions of altruism and pro-social behaviour, dimensions that can be cultivated since childhood (House & Tomasello, 2018; House et al., 2020). Play has long been recognised as a means to foster empathy, cooperation, and sensitivity toward the common good (Orlick, 1983). Game-based pedagogical approaches have demonstrated effectiveness in promoting pro-social behaviour (Bilancini et al., 2023), engaging both young students and their families while remaining low-cost, scalable, and amenable to follow-up (Nesti, 2017; Plass & Homer, 2015; Dix, 2019). The primary innovation of this research lies in assessing a game-based intervention in the context of pro-social behaviours related to blood and plasma donation. While prior work has examined such approaches in areas such as sustainable water use (Bilancini et al., 2021), no experimental study to date has focused on their impact on donation-related pro-social behaviours. This paper presents a pilot randomised controlled study testing the effectiveness of the CapitanAVIS project, a ludic-educational intervention centred on a collaborative board game conveying key information about blood compatibility and the collective donation system, aimed at promoting donation culture and pro-social attitudes among primary school students in the Versilia area, province of Lucca, Italy. Two research questions guided the study: (1) what is the effect of a board game activity, compared to drawing-based activities, on children's knowledge of blood donation?; (2) what is the effect of the two conditions on pro-social attitudes in children

aged 8–10? Approximately 680 students from grades 3–5 across 22 classes were randomly assigned to a treatment group (T), engaging with the CapitanAVIS board game in school and family settings, or a control group (C), involved in drawing and narrative activities on the donation theme. Data were collected at three time points, W0 (March 2022), W1 (April 2022), and W2 (May–June 2022), assessing playful habits, pro-social attitudes, and blood donation knowledge. Results indicate that knowledge of blood donation increased in both groups, with greater gains in the treatment group. Pro-social attitudes and allocation behaviour did not differ substantially between conditions, with no systematic behavioural change over time and considerable inter-individual variability. Exploratory analyses suggest a modest positive association between playful habits and pro-social attitudes. These findings provide preliminary evidence supporting game-based interventions for public health knowledge dissemination in school settings, and confirm the feasibility of the experimental design for future large-scale implementations.

A FRAMEWORK FOR AN AI-SUPPORTED DESIGN OF GAME-BASED LEARNING UNITS AIMED AT ENHANCING PROSOCIAL BEHAVIOUR AND RECOGNITION OF THE OTHERS

Francesco Claudio Ugolini (Università degli Studi Guglielmo Marconi, Italy) · **Flavia Di Donato** (Università degli Studi Guglielmo Marconi, Italy) · **Domenico Morreale** (Università degli Studi Guglielmo Marconi, Italy) · **Alessia Travaglini** (Università degli Studi Guglielmo Marconi, Italy)

Game-Based Learning | Prosocial behaviour | recognition of the others

The paper presents a theoretical framework and specific prompts useful for AI generation of game-based Learning Unit aimed at developing prosocial and recognition of the others skills. The framework is that of peace education, seen as a culture of relationships that is built through educational processes and social experiences in which individuals learn to confront the plurality of differences. In this context, it is possible to leverage the potential of board games and video games, included within appropriately designed Learning Units as a whole, which include within themselves playful activities and activities around the game (Andreoletti & Tinterri, 2023). While board games constitute symbolic systems governed by explicit and shared norms within which participants act, make decisions, play roles, and engage with others, video games, while presenting risks in terms of aggression, can in some cases increase prosocial behavior and recognition of others (Katsarov et al., 2019, Lopez-Naranjo et al., 2025). The contribution is based on a theoretical framework that contemplates three dimensions, directivity, sociality and projectivity (Ugolini & Morreale, 2023; forthcoming), linked respectively to the problem scenario, social scenario and identity scenario of Hanghoj (2013) and to the qualification function, socialization function and subjectification function of Education (Biesta, 2009). In this paper, we focus this framework on prosociality and on recognition of the other. Through this framework, it is possible to train Generative AI (Ugolini et al., 2025), which, through appropriate prompts, is able to generate the project of a competence-oriented Learning Unit, in a secondary school context, based on a gaming experience and linked to curricular objectives, above all those defined for civic education. The research proposes an analysis involving expert teachers and game designers, of the AI-generated Learning Unit projects in order to evaluate their feasibility in context, both from the point of view of design coherence and from the point of view of the validity of the theoretical reference model.

HOW PLAY DEVELOPS BEAUTY, SKILLS, AND BELONGING

Paolo Lucattini (University of Molise, Italy) · **Krystina Castella** (ArtCenter College of Design Pasadena, California, United States of America) · **Ivana Rivero** (Universidad Nacional de Río Cuarto (UNRC), Argentina) · **Marcelo Ducart** (Universidad Nacional de Río Cuarto (UNRC), Argentina)

Play-based learning · child agency · play equity

Play is not marginal activity but a central social practice for individual and collective formation; therefore it must be rethought with pedagogical, philosophical, and design perspectives that integrate school, community, and university. Pedagogically, play is an instrument of active learning that fosters cognitive, emotional, and relational competences when adults recognize it as an educational practice—facilitating, designing, or simply observing a heterogeneity of experiences (structured games, risky play, creative-expressive workshops, shared reading, physical activities, etc.) calibrated to children's needs, enjoyment, and resources. Philosophically, play is a space of child agency and meaning-making: valuing children as competent actors means promoting practices that allow negotiation, experimentation, and the rewriting of social norms, countering mere reproduction of inequality. This requires an ethics and foresight in design that consider equity, dignity, and participation, acknowledging limits imposed by economic, cultural, and social capital while seeking to expand them through inclusive practices. From a design perspective, play spaces should be conceived as educational infrastructures integrated within territorial networks: open schools, car-free streets, redesigned courtyards, equipped parks, libraries, and recreation centers functioning as ludic-educational ecosystems where different ages meet in dedicated and intergenerational opportunities. Participatory design—engaging children, parents, teachers, and community—increases social cohesion and relational capital, allows calibration of material and symbolic resources, and promotes accessibility and safety. Public policy and urban planning play a crucial role in redistributing opportunities: targeted investments reduce disparities between neighborhoods and foster habitus oriented to creativity, negotiation, and autonomy. In urban contexts with dense community networks (neighborhood associations, active parishes, accessible sports centers), children can benefit from a plurality of structured and supervised play opportunities with important health and developmental benefits. Conversely, excessive scheduling and reduced informal free-play contexts can be significant barriers to creativity and nature contact. In peripheral and marginalized contexts, weak community networks often translate into scarce play opportunities, frequently compensated by informal street play or solitary digital media use; rural settings with dispersed landscapes may channel children into solitary, nature-based play. Play's unpredictability and unfinished reinterpretation of actions generate a unique aesthetics of play and players, an estrangement that seduces by destabilizing. This contribution integrates diverse research approaches (special pedagogy, physical education, sustainable and integrated design) across three geographically distant contexts—Molise (Italy), Río Cuarto (Córdoba, Argentina), and Pasadena (California, USA)—to argue that rights to play not only educate participants and spectators but also contribute to fairer, more peaceful, and resilient communities.

Privatization of Education, Segregation and Inequalities

PANEL CONVENORS: Marco Oberti (Sciences Po, France); Quentin Ramond (Center for Economics and Social Policy (Ceas), Universidad Mayor)

PANEL KEYWORDS: privatization, Segregation, Social cohesion

Many countries are experiencing growth in private education, reflecting state retrenchment from educational provision and the rise of liberal thinking that promotes parental school choice and competition. Choosing a private school may be guided by adherence to moral and ethical principles associated with a specific religious framework, but it is also frequently part of a deliberate strategy to avoid public schools with higher share of lower-class and minority students (Oberti 2007). Prior research indicates that the expansion of private education complicates public authorities' efforts to ensure equal educational opportunity, increases school segregation, and has little impact on educational achievement (Dupriez et al. 2023). This session focuses on the broader societal consequences of private schooling expansion, examining its implications for social cohesion and the functioning of contemporary democracies. We aim to explore how private education affects relationships between different social and ethno-racial groups and the assumption of meritocracy, thereby potentially challenging social cohesion (Janmatt 2014). The status and functioning of private schools vary greatly across and within educational systems and may produce heterogeneous effects that we aim to investigate. We welcome proposals from around the world using quantitative and/or qualitative methods to address the following questions: - How education privatization affects school segregation and, more generally, inter-class and inter-ethnic relationships? - What are the consequences for injustice, discrimination, or even discontent and political protest? - What types of relationships are established between public and private education? Are local "deprivatization" initiatives emerging, and what are their effects on inequalities?

PRIVATE EDUCATION AS AN EXIT STRATEGY IN A GENTRIFYING CITY: SCHOOL CHOICE AND EDUCATIONAL TRANSITIONS IN BARCELONA

Sheila Gonzalez Motos (University of Barcelona, Spain) · **Xavier Bonal** (Autonomous University of Barcelona, Spain)

private education · school segregation · school choice

Private and publicly subsidised private schools occupy a contested position in contemporary education systems. Although often justified as instruments to diversify educational provision and accommodate parental preferences, a substantial body of research shows that they also play a central role in reinforcing social stratification and school segregation (Ball, 2003; Bonal et al., 2019; Zancajo & Bonal, 2022). While previous studies have conceptualised private schooling as a form of "exit" from public education, less attention has been paid to how this mechanism intersects with urban change and with key moments in students' educational trajectories. This article addresses this gap by examining how neighbourhood gentrification and the transition from primary to secondary education shape demand for private schooling in Barcelona. Barcelona provides a particularly informative case. Its education system combines a large publicly subsidised private sector with a school admissions framework that allows families considerable scope to bypass local public schools. At the same time, the city has experienced intense and spatially uneven gentrification, reshaping neighbourhood social composition without necessarily displacing long-term residents (López-Gay et al., 2020). This makes Barcelona especially suitable for analysing how educational choices respond to urban change in contexts where social mixing and inequality coexist spatially. Using longitudinal administrative register data, the analysis focuses on three interrelated processes: the social and contextual determinants of private school enrolment in primary education, changes in private school demand between 2014 and 2023, and the factors associated with students' transitions from public primary schools to private secondary schools. The findings show that private education operates as a key mechanism through which families manage

perceived social and academic risks in local education markets. Opting out of public schooling is strongly associated with the social composition of nearby schools, the local availability of private provision, and neighbourhood socio-economic characteristics, confirming the role of private education in facilitating selective withdrawal from public provision (Scandurra et al., 2021; Boterman, 2022). However, these dynamics vary across educational stages. In neighbourhoods undergoing gentrification—where new middle-class residents increasingly coexist with disadvantaged populations (López-Gay et al., 2020)—families are less likely to opt out of public education during primary schooling. This suggests that gentrification can initially foster engagement with local public schools, in line with research highlighting selective forms of opting in among middle-class households (Boterman, 2013; Posey-Maddox et al., 2016). This engagement, however, appears to be fragile. The transition to secondary education emerges as a decisive turning point in families' schooling strategies. At this stage, the moderating effect of gentrification on private school demand weakens substantially, and many families who previously chose public primary schools move to private or publicly subsidised private secondary schools. These transitions reflect heightened concerns about peer composition, academic differentiation, and future educational pathways as students approach adolescence (Ball, 2003; van Zanten, 2009). In conclusion, this article shows that selective withdrawal from public education is not a static phenomenon but a process that unfolds over time and across institutional thresholds.

THE SECRET GARDEN OF SCHOOL SEGREGATION IN THE UK: PRIVATE SCHOOLS, SOCIAL CLASS AND GEOGRAPHY

Hakan Forsberg (Uppsala University, Sweden) · **Sol Gamsu** (Durham University, United Kingdom)

private schools | segregation | social class

Socio-economic segregation in UK schools has primarily been explored through analysing Free School Meals (FSM) as a marker of deprivation. We seek to explore the 'secret garden' of UK school segregation research, providing three new insights to understanding social segregation in UK schools. Firstly, we analyse social class segregation moving beyond a binary measure of socio-economic inequality. Secondly, we include private schools - a major source of inequality within British schooling, often omitted due to missing data. Finally, we use administrative data to undertake pan-UK analysis with a greater degree of geographical and school type detail than has previously been possible in comparisons between Scotland, Northern Ireland, Wales and England. Using first year university records from the Higher Education Statistics Agency (HESA) for 2017-2019, we construct parental National Statistical Socio-Economic Classification (NSSEC) profiles for 3269 post-16 institutions across the UK. We apply the multigroup Mutual Information Index (M) and its normalised variants (H, LS) to quantify segregation at four geographic scales: home nation, English region, local authority and individual school. At a UK-wide scale segregation decreases by 22% if we exclude private schools and we find substantial geographical variation with private schools having a larger effect on school segregation in cities, particularly London. Fixed effects models for England reveal that private or selective school status and high local FSM prevalence each increase a school's local segregation score, and these effects intensify in more disadvantaged local authorities. The findings demonstrate that private schooling amplifies class-based segregation beyond what FSM-based analyses capture.

SPATIAL INEQUALITIES OF EDUCATIONAL OPPORTUNITY AND POLITICAL DISCONTENT: LONGITUDINAL EVIDENCE FROM URBAN CHILE

Maela Guillaume Le-Gall (Nuffield College, Oxford Universtiy, UK) · **Quentin Ramond** (Centre for Economics and Social Policy, Universidad Mayor, Chile)

political discontent | school | spatial inequality

In recent decades, the transformations of welfare regimes, characterized by the erosion of traditional safety nets and a tendency toward more localized forms of welfare delivery (Andreotti & Mingione 2016), have increased socio-spatial disparities in access to services essential for people well-being. Education represents a critical domain of this transformation, as recent market-oriented reforms have led to the expansion of private schooling and to a greater responsibility assumed by local governance actors for public education provision. Such shifts have contributed to increasing spatial inequalities in educational opportunity. Affluent areas often concentrate attractive public and private schools, whereas disadvantaged neighborhoods have lower-quality public schools that face competitive pressures from private institutions (Owens & Candipan, 2019). While several studies have shown that these spatial disparities in educational opportunity intensify school segregation (Oberti & Savina, 2019) and academic achievement gaps (Claes & Moulin, 2026), surprisingly less attention has been paid to their broader political consequences (Cremaschi et al. 2025; Nyholt, 2023). This study aims to help fill this gap in the literature by examining how spatial inequalities in public schools within increasingly privatized systems affect both conventional and contentious forms of political participation. Our argument is that the uneven spatial distribution of public and private schools does not only reorganize educational opportunities but may also generate grievances that can transform the relationship between citizens and the State. We anticipate that exposure to (good quality) public school deprivation may undermine individuals' perceptions of meritocracy and trust in institutions, which can ultimately foster political resentment. Importantly, these dynamics likely vary by social class, given that lower-class people are more dependent on public services. To what extent does spatial inequalities in education opportunity relate to political discontent? Does the relationship between local educational conditions and political discontent vary by social class? We conduct this research in Chile, one of the most unequal countries in the world where the availability and quality of schools vary considerably across municipalities. We combine data from the Chilean Longitudinal Social Survey (2018-2023) with administrative information on schools. Results from multilevel regression models indicate that local deprivation in public school is associated with distinct political responses. Among lower-income groups, limited and low-quality public provision is linked to low-resource mobilization (e.g., petition, social media), while wealthier individuals respond through high-resource actions such as strikes. At the same time, declining levels of public education provision are associated with support for right-wing parties. We show that the effects are significantly stronger for education than for other key welfare services, like health. Overall, this article advances the literature on the geography of discontent by showing that beyond economic and cultural marginalization, spatially uneven welfare provision, particularly in education, constitutes a crucial determinant of political behaviors. We also contribute to longstanding research on social class and political behavior by showing that lower-income groups, who are more dependent on public provision, are more likely to mobilize politically in contexts of welfare deprivation. Third, we show that political reactions to institutional neglect encompass different and non-mutually exclusive forms.

ENABLING RESIDENTIAL MIX, REINFORCING SCHOOL SEGREGATION? PRIVATE SCHOOL CHOICE IN GENTRIFYING WORKING-CLASS NEIGHBOURHOODS IN PARIS METROPOLITAN AREA

Lise Lecuyer (Sciences Po Paris, France)

School segregation | Private education | Gentrification

In the French residence-based school assignment system, where access to public schools is tied to place of residence, one might expect growing social mix in neighbourhoods to lead to more diverse schools. However, this link is disrupted as families can opt out of their assigned public school by enrolling in publicly funded private schools. Recent studies across several French cities consistently indicate that about half of observed middle-school segregation stems from residential sorting, while the remaining half is produced by family school-choice strategies (Boutchenik et al., 2021; Souidi, 2024; Lécuyer et al., 2025). Changes in the school-aged population associated with gentrification can thus produce different outcomes at school level (Boterman, 2020). We focus on working-class and socially mixed neighbourhoods in the Paris metropolitan area, which have seen an influx of upper-middle-class households yet where growing residential diversity does not translate into changes in the social composition of local public schools. Our quantitative analysis uses individual and aggregate-level data to evaluate the extent and determinants of school choices and to compare the social composition of school catchment areas with that of local public schools. Our results show that private enrollment contributes to a widening gap between residential and school composition. However, opting out through private education is not specific to gentrifying contexts but is also widespread among upper-class families living in advantaged areas, even when the local public schools remain socially advantaged. This raises questions about what the choice of private school in working-class or mixed neighbourhoods reveals concerning inter-class and inter-ethnic relations (Raveaud & van Zanten, 2006; Oberti, 2007), compared to residential relocation or private enrolment in advantaged contexts. We complement this analysis with semi-structured interviews conducted in a gentrifying municipality. Finally, our study highlights how school choice operates not only as a response to residential location but also as a driver of it. While some households strategically relocate within preferred catchment areas (Lareau & Goyette, 2014; Owens, 2017; Ramond & Oberti, 2020), access to private schooling may conversely reduce the perceived risks associated with disadvantaged school environments and thereby facilitate upper-middle class settlement in working-class neighbourhoods (Candipan, 2020). The possibility of opting out of local public schools is therefore not merely a consequence of neighbourhood change but also one of its enabling conditions, with mixed implications for both residential and school segregation.

THE EMERGENCE OF A NEW PRIVATE HIGHER EDUCATION PATH : THE FRENCH “BACHELORS”

Tristan Ingrao (Université de Bourgogne Europe, France)

Higher Education | Privatization | Social Inequalities

The purpose of this paper is to present the results of research conducted since 2023 on the emergence of a new private higher education sector in France known as “bachelors”, an English literal translation of the French term “licence” used to refer to a private equivalent of the first cycle of university studies in France. However, these programs do not correspond to any defined degree and exploit a vague regulatory framework (Ingrao, 2025), allowing for a variety of recognition, ranging from no recognition to equivalence to a licence, including professional titles and the possibility of work-study programs made possible by the 2018 reform of apprenticeships in France. These are expensive programs, costing an average of €10,000 per year, offering training in various sectors such as business, management, engineering, art and audiovisual professions, as well as IT and environmental issues. “Bachelors” are presented as a private neoliberal alternative (van Zanten, 2019) to the traditional French higher education system and therefore fall between public universities and the French system of Grandes Écoles, both public and private. Given their cost (equivalent to private Grandes Écoles programs) and their marketing strategy, which presents them as an alternative to a public higher education system that is portrayed as lacking in individual support and professional integration, the emergence of this new private higher education sector raises questions about the resulting reconfigurations of socioeconomic inequalities within French higher education. So, which students enroll in “bachelor's” programs? Do they represent a new pathway for middle- and upper-class children with economic capital? Or, conversely, thanks in particular to the apprenticeship mechanism, do they represent a form of access to higher education for a new student population (Lemistre, 2021)? To answer these questions, this work draws on a mixed method approach that seeks to understand the supply and demand for “bachelors” in France, combining observations, web scraping, and survey data. I draw on 30 hours of ethnographic observation at student fairs. I also draw on a corpus of 518 files presenting “bachelor's” programs, compiled using a method of automatic online data extraction from two program directories for 2023-2024: Parcoursup (listing all public higher education programs after the baccalaureate, as well as some private programs) and Parcourprivé, the private platform offered by the French National Federation of Private Education. Finally, I draw on the secondary use of data from the Céreq Génération 2021 survey, which studies the career paths and professional integration of those who have left the education system since 2021. This research shows thus that “French bachelors” represent a real social intermediary between universities, which are absorbing the influx of students from the third wave of mass education (Coulangeon, 2008), and the Grandes Écoles, which are still very socially unjust (Bataille & Falcon, 2018). They tend to attract students from a less privileged middle class that is more ethno-racially diverse than the elite, but still seeking to distinguish themselves from the new university populations (Bodin & Orange, 2018).

PRIVATE LOGICS IN PUBLIC SCHOOLS: MARKETISATION AND SCHOOL SEGREGATION IN BOLOGNA

Irene Giunchi (University of Bologna, Italy)

School segregation | Marketisation of education | School choice

Since the 1980s, European countries have liberalised families' school choices. This liberalisation has proceeded along two main directions: the expansion of the private sector, through an increase in private schools and greater public support for attendance at these schools, and the loosening of the link between place of residence and school allocation within the public system, which has made the correspondence between catchment area and school assignment less binding in the admissions process. A growing body of research shows that the expansion of education privatisation contributes to increasing school segregation and weakening equal educational opportunities. Alongside the dynamics directly affecting the private sector, the liberalisation of school choice has also fostered processes of marketisation within public education systems, gradually blurring the boundary between public and private. In a context of increasing competition for pupil enrolments, public schools are encouraged to adopt strategies typically associated with the private sector, shaping their educational offer and organisational practices to attract socially advantaged families. Against this background, the paper examines the mechanisms through which this progressive blurring of the boundary between public and private unfolds within the public primary school system of Bologna, with particular attention to its implications for school segregation. Bologna represents an interesting case: as the private sector plays a limited role at the primary level (around 7%), competition among families for access to desirable schools takes place largely within the public system. This occurs within an institutional setting characterised by a school quasi-market and a dense distribution of schools across the city. The analysis focuses on a specific neighbourhood (Bolognina) characterised by pronounced socio-spatial inequalities, where large public housing estates coexist with areas recently affected by processes of gentrification. Drawing on qualitative research based on semi-structured interviews and observations conducted between 2025 and 2026 with teachers, school principals, parents and public administration officials, the paper reconstructs: (1) the mechanisms through which public schools seek to enhance their attractiveness by shaping their educational offer and adopting practices that contribute to selecting their student intake; and (2) the effects of these dynamics on the socio-ethnic composition of schools and on processes of school segregation and social cohesion. The findings show that, in a neighbourhood characterised by a high concentration of public housing and emerging gentrification processes, native middle-class families become a scarce and contested resource among public schools. Their presence is associated with reputational advantages and greater school attractiveness, with consequences for staff allocation and teachers' working conditions, as well as increased pressure on local authorities to secure additional resources. In this context, schools strategically mobilise their educational offer and professional resources to retain middle-class families within their catchment areas while attracting others from neighbouring areas, contributing to polarisation between schools in close spatial proximity, even within the same comprehensive school and under the same leadership. These dynamics are also fuelling growing tensions and forms of protest among local residents, raising questions about the implications of increasing competition between public schools not only for equal educational opportunities but also for social cohesion.

ARE PUBLIC AND PRIVATE SCHOOLS URBAN AMENITIES IN FRENCH REGIONAL CITIES?

Audrey Chamboredon (Sciences Po Paris, France)

Education | Choice | Parenting

This paper examines the hypothesis that schools are increasingly becoming “urban amenities”. The findings show that this pattern may apply to some private schools, but much less to public schools in the French cities studied here, despite a catchment area system that closely ties access to public schools to place of residence. Some research suggest that, in countries with a catchment-area system, parents are more likely to consider the characteristics of local schools than in countries with a system of free school choice (Boterman et al., 2019). In the United States for instance, sociologists highlight that public schools are increasingly becoming urban amenities that urban planners can leverage to attract socially advantaged families, particularly in city centers (Cucchiara, 2013; Nafaa & Maaoui, 2025). The liberalization of school choice in certain cities—through the creation of charter schools, for example—would thus weaken the link between school and residential choice (Ely & Teske, 2015). My study questions this hypothesis in the French context, where there is a system of catchment area in public schools but not in private ones. Because they are strongly funded by the state, private schools are not very expensive, and 17.3% of primary and secondary education students were enrolled in private schools in 2023. I conducted ninety-three interviews with middle- and upper-class parents in socially diverse neighborhoods within the city centers and suburbs of two regional French cities. While school choice sometimes influenced families’ residential trajectories, very few interviewees considered their catchment area when choosing where to live. Conversely, several did consider the location of private schools. This observation leads me to question how parents perceive public and private schools and their anchoring within the urban landscape. I first show that, before having children in school, parents rarely perceive public schools as services that vary locally. It is through the concrete experience of parenthood that they see differences between public schools, particularly in terms of the student populations they serve. Since it is primarily the transition to middle school that is a source of concern in France, this worry may arise well after the decision to move to a new neighborhood—a decision often made around the time children are born. Encouraged by the Republican ideal of a centralized and egalitarian school system, this relative absence of early concern is also made possible by the availability of affordable private schools, which provide an alternative for middle- and upper-class families who realize that their local school does not suit them. Conversely, parents who prefer private education pay closer attention to school locations. Prestigious private schools can be viewed as “amenities” of affluent neighborhoods, as their presence is a feature of the urban landscape that contributes to making these neighborhoods appealing for upper-class families. This challenges the idea that school districts significantly influence families’ residential choices and instead suggests that the location of private schools is likely to have a greater impact on residential trajectories of some parents.

School Evaluation For Improvement, Equity, Inclusion And Well being

PANEL CONVENORS: Cristina Stringher (Invalsi, Italy); Michela Freddano (Invalsi, Italy)

PANEL KEYWORDS: School evaluation, wellbeing, inclusion

In Europe, school evaluation is common, also in ECEC settings, either by top-level inspectorates, or other evaluators, including settings themselves. Several forms of evaluation have been implemented to make schools accountable according to new public management theories: among them, quality certifications and audits, school external and internal evaluation or self-evaluation (Meuret & Morlaix, 2003; OECD, 2013). However, when coupled with incentives or sanctions, these initiatives fall short when it comes to truly promote improvement and not mere accountability or bureaucratic practices, not to mention quality certifications that leave the schools unchanged. In Italy, following Presidential Decree 80/2013, national school evaluation is a reality since 2015 and it has been at least experimented by INVALSI in a variety of settings, including adult education centres, VET centres and preschools. With the advent in 2025 of national preschool evaluation, the entire school system is undergoing a profound movement towards improvement. However, little is known about the mechanisms that yield positive school turnaround and how national student assessment data can be exploited to determine a school's priorities, outcomes and process objectives towards improvement. This panel invites scholars and practitioners to engage with this complex issue, by analysing the following topics connected to both external and internal school evaluation or self-evaluation: - data literacy of school staff; - school leadership; - impact of school evaluation on improvement. Papers will be selected for their capacity to bring fresh ideas, also methodologically, to investigate effects and mechanisms of evaluation for improvement and evidence-based decision-making (Scheerens, 2016).

CRITICAL ISSUES AND INCLUSIVE PERSPECTIVES TO PROMOTE THE PARTICIPATION OF PEOPLE WITH DISABILITIES AND NEURODIVERSITIES IN EDUCATIONAL CONTEXTS

Fabiola Palmiero (Università degli Studi della Campania "Luigi Vanvitelli", Italy) · **Davide Di Palma** (Università degli Studi della Campania "Luigi Vanvitelli", Italy) · **Gianluca Gravino** (Università degli Studi della Campania "Luigi Vanvitelli", Italy) · **Giovanna Scala** (Università degli Studi della Campania "Luigi Vanvitelli", Italy) · **Generoso Romano** (Università degli Studi di Napoli "Parthenope")

Inclusion | Democracy | Disability

The inclusion of people with disabilities and neurodivergent individuals is essential for the functioning of democratic societies. This study takes a mixed qualitative-quantitative approach to investigating the social, cultural, and structural barriers that restrict the democratic participation of students with disabilities and neurodivergences, and to evaluating the effectiveness of inclusive pedagogical practices in secondary school settings. The sample comprises 120 students, divided into an experimental group who participated in an inclusive educational programme and a control group with comparable characteristics. Validated quantitative tools were employed, including the Inclusive Education Questionnaire and the Participation and Empowerment Scale. The qualitative element, which involved open-ended questionnaires and thematic analysis using NVivo, explored perceptions of, obstacles to, and potential benefits of inclusive practices. The results showed statistically significant differences between the groups, with an increase in perceived participatory self-efficacy and democratic belonging among students involved in the inclusive programme. These findings highlight the need to rethink education as a democratic space that values difference and promotes cultural and structural accessibility to participation.

GAMIFICATION INCLUSIVE TEACHING METHODS AND PARTICIPATORY DEMOCRACY

Giovanna Scala (Università degli studi della Campania Luigi Vanvitelli, Italy) · **Davide Di Palma** (Università degli studi della Campania Luigi Vanvitelli, Italy) · **Gianluca Gravino** (Università degli studi della Campania Luigi Vanvitelli, Italy) · **Fabiola Palmiero** (Università degli studi della Campania Luigi Vanvitelli, Italy) · **Giovanni Tafuri** (Università degli studi di Napoli Parthenope, Italy)

Inclusion | Equality | Education–Democracy Nexus

This study investigates the potential of gamification in civic education as an inclusive pedagogy aimed at promoting democratic participation in lower secondary schools, with a particular focus on students with physical disabilities and neurodiversities (dyslexia). Within the framework of inclusive pedagogy and participatory democracy, the research adopts a mixed qualitative-quantitative design with an experimental group and a control group. The sample, consisting of approximately 80 Year 7 students (aged 11–12), was involved in a six-week intervention: the experimental group followed a gamified programme designed according to the principles of Universal Design for Learning, while the control group followed the traditional curriculum. Quantitative data, collected using the Student Engagement Instrument (SEI) and the Self-Efficacy Questionnaire for Children (SEQ-C), show significant increases in engagement and perceived self-efficacy levels in the experimental group, with particularly marked effects among students with special educational needs. Qualitative analysis, based on semi-structured interviews with students and teachers, highlights a strengthening of the sense of belonging, self-esteem and agency, as well as an expansion of opportunities for participation and representation in the classroom. The results suggest that gamification, if intentionally designed to be inclusive and cooperative, can be configured not as a simple motivational strategy, but as a pedagogical device capable of making civic education a concrete experience of democratic, equitable and participatory citizenship.

SYSTEMATIC QUALITY WORK AS A TOOL FOR IMPROVING EQUITY? A STUDY ON LOCAL EDUCATIONAL AUTHORITIES IN A DECENTRALIZED SCHOOL SYSTEM

Anna Maria Swärd (Stockholm University, Sweden)

School leadership | Systematic quality work | School improvement

Across Europe and in many other countries influenced by new public management, governance by follow-up and evaluation has increased in recent years. In a decentralized school system, such as in Sweden, local educational authorities (LEAs) have substantial responsibility for resource allocation and follow-up, while leadership is shared both within the LEA level between local elected politicians and superintendents and with, in some respects, autonomous principals (Jarl et al., 2024). This creates a multi-tiered leadership landscape in which responsibilities for equity, resource distribution, and school development are negotiated across several layers of governance. The research to be presented examines perceived possibilities and constraints in LEAs' systematic quality work (SQW), a legally mandated process in the Swedish Education Act. SQW requires LEAs to follow up on previously allocated resources, analyze results, and propose future interventions intended to support school development. The study approaches SQW from an educational equity perspective, drawing on a definition that holds that all pupils, regardless of ability or background, have the right to learning opportunities and to develop within an education system of equal quality (Ainscow, 2020). Equity in education has proved complex to realise in practice, despite its widely shared objective, in Europe and elsewhere (Leithwood, 2021). The study adopts an understanding of equity grounded in social justice and fairness attentive to individual circumstances (Espinoza, 2007; Sen, 2009). Drawing on the capability approach developed by Amartya Sen and Martha Nussbaum, and refined by Lorella Terzi (2007), equitable funding may justify additional provision when necessary to enable pupils with disabilities and special educational needs to participate fully in society. In democratic systems, governance structures are expected to distribute resources to enable such opportunities for all pupils to achieve and experience well-being (Terzi, 2007; 2025). A central challenge, though, is identifying and following up on relevant, not merely measurable, data that can meaningfully inform policymakers' decisions about resource allocation and interventions that actually meet students' needs (Swärd & Ramberg, 2026). The empirical material consists of aggregated quality reports for compulsory schools and reports on strategic objectives and budget plans from 20 Swedish municipalities. In addition, 29 interviews with local politicians and superintendents were conducted across 18 of these municipalities. The material was analyzed using content analysis (Lyhne et al., 2025), guided by neo-institutional theory and sensemaking theory (Smets et al., 2017; Weick, 2005). Tentative results indicate that the dynamics of shared, distributed, and multi-tiered leadership at the LEA level constitute a crucial component of SQW at the municipal level. These dynamics shape the practices of principals and teachers and influence the conditions for special educational provision and support for students in need. Preliminary findings also suggest a lack of systematic follow-up on the achievements of students with disabilities and special educational needs, as well as limited evaluation of the impact of earlier provisions. Policy-makers are therefore urged to take further action, and researchers to deepen inquiry in this area, including by promoting greater stakeholder involvement, particularly pupils.

EVALUATING INCLUSION QUALITY IN EARLY CHILDHOOD EDUCATION AND CARE: TOOLS AND REFLECTIVE PRACTICES FOR A DEMOCRATIC COMMUNITY

Claudia Lichene (Università degli Studi di Bergamo, Italy) · **Nicole Bianquin** (Università della Valle d'Aosta)

Evaluation in Early Childhood Education | Inclusion | Participation

Inclusion constitutes a foundational dimension of educational democracy and is rooted in the social and cultural transformations of the 20th century that affirmed every child's right to full participation in school and social life (Dewey, 1916; 1938; Bruner, 1961, Canevaro, 2006; Fiorucci, 2018). Within Early Childhood Education and Care (ECEC) services, this principle translates into the recognition of the child as a citizen from birth: a rights-holder and an active agent in processes of meaning-making and relational construction. The Italian National Guidelines for the Integrated 0–6 System (2021) and the National Orientations for Early Childhood Services (2022) outline a cultural and pedagogical framework that assigns educational contexts the responsibility to promote quality, equity, and participation, moving beyond a merely adaptive model of inclusion. From this perspective, inclusion does not require children to conform to pre-established organizational structures;; rather, nurseries and preschools are called to reorganize themselves in order to recognize and value differences. Body, care, and play are positioned as privileged spaces for expression, encounter, and the construction of democratic citizenship. Conceived as a dynamic and participatory process, inclusion requires organizational and cultural structures capable of sustaining reflective and democratic practices within educational teams. In this framework, tools for evaluating and self-evaluating inclusive educational quality do not serve classificatory or compliance-based functions; instead,, they operate as mediating devices that foster dialogue, collective reflection, and the negotiation of meaning (Bondioli, Ferrari, 2000; Freddano, Stringher, 2020), thus supporting the development of professional communities grounded in shared responsibility. This contribution is based on a narrative review of the national and international literature, aimed at identifying and examining tools for evaluating inclusive quality in ECEC contexts. The bibliographic search focused on the last ten years and was conducted through scientific databases including Google Scholar, Scopus, and ERIC, using keywords such as "evaluation tools, Inclusion Quality Scale, Early Childhood Education, Participation, reflexivity." Selected instruments targeted 0–6 services, addressed quality from an explicitly inclusive perspective, and were conceived for participatory and reflective use within educational teams. The identified tools were analyzed through a comparative framework grounded in recurring pedagogical dimensions in the inclusion literature (Booth & Ainscow, 2002; Bellacicco & Dell'Anna, 2022; Canevaro, 2013). The analysis explores their potential to sustain democratic practices, strengthen professional reflexivity, and promote institutional self-transformation.. Findings suggest that such instruments, when embedded in dialogical and participatory processes, can contribute to shaping educational communities that recognize children as citizens from the earliest years of life. In this sense, evaluation emerges not as a technical or neutral procedure, but as a democratic practice capable of nurturing inclusive cultures and reinforcing participation as a structural dimension of early childhood education.

THE 4+2 EDUCATION PATHWAY AS A MULTILEVEL GOVERNANCE FRAMEWORK: A DESIGN-BASED ANALYSIS OF A CASCADE PROFESSIONAL SUPPORT INITIATIVE

Francesca Storai (INDIRE, Italy) · **Paola Nencioni** (INDIRE, Italy) · **Antonella Zuccaro** (INDIRE, Italy)

Professional development | Multilevel governance | documentation

The paper discusses the implications of the model for evaluation and improvement policies, showing how support and documentation mechanisms do not merely perform a supportive function but can also act as tools capable of orienting system regulation and fostering continuous learning. From this perspective, the paper presents the INDIRE support project implemented within the Technological and Vocational Education and Training Pathways (4+2 model) during the 2024/2025 school year. The initiative involved 145 training pathways selected through a call issued by the Italian Ministry of Education and Merit (Circular no. 5299, 28 December 2023). The intervention took place during the transition from the pilot implementation of the 4+2 model to its system-wide institutionalization within the framework established by Law 121/2024 and Decree Law 127/2025, which integrated the model into the national education system and gave it a structural role within the technical and vocational education sector. The project was conceived as an action research process in which policy makers, expert trainers, teachers, ITS Academy staff, and labour market professionals collaborate in curriculum design and implementation within a multilevel governance framework. International literature highlights how action research can foster the transformation of teaching practices, support co-design processes, and strengthen organizational and professional capacity in real contexts (Dahal, 2023; Summak, 2022; Kemmis et al., 2014). It is also recognized as a tool for integrating individual learning and organizational development, enhancing the adaptive capacity of multilevel education systems (Brydon-Miller et al., 2021). The 4+2 model provides an integrated curriculum consisting of four years of upper secondary education (technical, vocational and regional vocational education and training – IeFP) followed by two years at an ITS Academy. The curriculum is developed in collaboration with ITS Academy instructors and labour market professionals and promotes a sector-based approach with strong laboratory-based learning, while maintaining the central role of core and general education subjects. It integrates formal knowledge, technical-professional competences, and situated practices, ensuring vertical continuity and shared responsibility among different education and training systems (Coffield, 2019; Eraut, 2004). The pilot involved policy makers, expert trainers, and training pathways in a process of co-construction and situated adaptation. Documentation produced at different system levels — including planning tools, reflective journals, and interim feedback supported monitoring, regulation, and continuous improvement. Documentation collected by individual pathways also constitutes a repository of practices useful for guiding future implementations. Within this perspective, cascade training is interpreted as a pedagogical and system-building architecture in which policy, curriculum, and professional development become integrated dimensions of a single intervention and research framework. The paper critically examines the potential and limits of this multilevel governance arrangement in supporting improvement, focusing on the organizational and professional conditions that enable — or hinder — the shift from a compliance-oriented logic to a system learning-oriented approach. The 4+2 pathway is therefore proposed as an empirical context for reflecting on the relationship between evaluation, governance, and change in contemporary education policies (OECD, 2022; Hargreaves & Shirley, 2009).

FROM DISTAL RAV TO PROXIMAL RAV: PEER REVIEW FOR ACTIONABLE SCHOOL IMPROVEMENT

Laura Evangelista (Istituto Nazionale per l'Analisi delle Politiche Pubbliche (INAPP), Italy) · **Diego Boerchi** (Università Cattolica del Sacro Cuore, Italy) · **Concetta Fonzo** (Istituto Nazionale per l'Analisi delle Politiche Pubbliche (INAPP), Italy)

peer review | school self-evaluation | data-based governance

In systems of school evaluation grounded in objective and comparable indicators, robust data are a necessary but insufficient condition to foster improvement, equity, inclusion and wellbeing. A recurrent issue is the diagnostic distance between "distal" indicators mainly used for reporting (e.g., final outcomes, dropout, early results in the subsequent pathway) and the school processes that generate them. In data-based governance settings, this distance is amplified by data infrastructures and performative pressures, leading schools to align, resist, or use indicators instrumentally, rather than as learning resources (Landri, 2021). When school self-evaluation reports (RAV) are interpreted mostly through distal outcomes, schools may produce simplistic causal attributions, under-specified priorities, and compliance-driven practices, ultimately weakening evidence-informed action (Falzetti, 2025). This paper proposes a peer review framework as an intermediate device between external evaluation and internal self-evaluation, aimed at turning distal indicators into actionable questions and, crucially, at building the proximal evidence needed for sound interpretation. Distal RAV indicators are treated as signals for scoping and prioritizing, not as sufficient grounds for causal hypotheses. The core mechanism is an integrated evidence package where distal indicators are complemented by proximal, multi-source and process-sensitive data (e.g., school climate, wellbeing, engagement, classroom and organizational artefacts, structured observations, stakeholder feedback, and longitudinal trends; Freddano & Stringher, 2021), in line with European peer review approaches developed within VET quality assurance and coherent with the EQAVET perspective on quality cycles (ISFOL, 2012, CEDEFOP, 2015; Evangelista & Fonzo, 2023). This design is meant to mitigate tensions between autonomy, accountability and innovation within the Italian National Evaluation System and to protect teachers' professional judgement under performance-based accountability (Mentini & Levatino, 2024; Mentini, 2024; Parcerisa et al., 2022). A second pillar is a differentiated and competent peer review team. Beyond peers from other schools, the protocol includes reviewers with domain-specific expertise related to the focus area and actors located along the educational continuity chain, so that interpretations and recommendations are both rigorous and feasible. The approach also builds on Italian experimentation with school-to-school peer review and visiting as capacity-building devices for self-evaluation and improvement (Giampietro, Poliandri, & Pillera, 2023), and on work highlighting the need for structured reflection on monitoring and evaluation within improvement plans (Freddano & Mori, 2019; Freddano, 2024). The process is presented as a lightweight but structured protocol: (1) preparation of the evidence package and clarification of evaluation questions; (2) triangulation across sources during the peer visit; (3) joint interpretation of evidence and identification of priorities; (4) definition of improvement goals that are observable, time-bound and linked to local "sentinel" indicators; (5) redesign of actions and responsibilities; (6) longitudinal follow-up to document change and unintended effects, consistent with collaborative peer enquiry models (Godfrey, 2020; Ridge & Lavigne, 2020). The expected output is not a judgement, but a

concise set of priorities, redesigned actions and a verification plan aligned with improvement-oriented evaluation. As a brief illustration, the framework is applied to student guidance processes, where distal outcomes alone poorly represent the quality of underlying practices.

GRADUATE STUDENTS' VIEWS ON INFRASTRUCTURE AND TEACHING STUFF IN GREEK SECONDARY EDUCATION SYSTEM

Christos Militsopoulos (University of Thessaly, Greece)

quality assurance | system theory | student views

Education lies at the core of human societal evolution and is a fundamental field of study concerning any developmental process of our species. To date, the educational process has been a domain that is difficult to define and consequently even harder to evaluate with the aim of improvement. The approach for the present study was chosen because it aligns with the multi-factorial nature of education, grounding itself in systems theory. This framework allows the research questions to be placed within a web of interconnected systems and sub-systems (e.g., society, government, educational unit, educators, students, guardians) (Mavrofidis, 2018). In a democratic context, hearing the voices of those most affected by a system (the students/learners) is a fundamental democratic practice. Furthermore, this systemic perspective is crucial for understanding how education and democracy are intertwined in building "just, inclusive, and sustainable" societies. Our qualitative research was based on this theoretical framework and focused on the students' views regarding the quality of the educational process (Sallis, 2002). For this purpose, ten in-depth personal interviews were conducted with graduates of Secondary Education in Greece (Creswell, 2019). The participants selected had all graduated from Secondary Education within the preceding 1-3 years and had completed their 18th year of age, thus being adults at the time of the interviews. The main objective of the research was to investigate and compare the students' views on school infrastructure and teaching staff in order to assess the extent to which these influence the overall perception that students formed about school, particularly during the last three years of their attendance. To answer the main research question, a thematic analysis was performed on the data collected from the interviews, which also highlighted additional areas for study concerning the development of social skills within the school environment. In a period where the central strategic choice for improving education places greater emphasis on strengthening infrastructure and less on strengthening human capital, it is useful to hear the perspective of the students on the impact these interventions have on their daily educational reality.

STUDENT SURVEYS AND SCHOOL EVALUATION FOR IMPROVEMENT: A PROVINCIAL ANALYSIS AND A CASE STUDY FROM TRENTINO

Francesco Pisanu (Provincia Autonoma di Trento, Italy) · **Paolo Pancheri** (ITT Marconi Rovereto, Italy) · **Daniela Depentori** (ITT Marconi Rovereto, Italy) · **Francesco Rubino** (Provincia Autonoma di Trento, Italy) · **Giuseppe Rizza** (Provincia Autonoma di Trento, Italy)

School evaluation | Student surveys | Improvement

Over the last years, the Autonomous Province of Trento (Italy) has institutionalised the use of data from an annual upper-secondary "student customer survey" (around 5,000 respondents per year) as part of its broader school evaluation and improvement infrastructure. Originally designed to capture students' overall satisfaction, the survey includes a specific section on teaching quality, inspired by the Measures of Effective Teaching (MET) framework, aimed at eliciting students' perceptions of key instructional dimensions such as clarity, classroom climate, support, and engagement (Kane & Staiger, 2012; Bill & Melinda Gates Foundation, 2013). Results are routinely returned to schools in aggregated form and can inform professional discussion, self-evaluation processes, and school improvement priorities. This paper discusses the educational potential and governance implications of these data through two complementary analytical levels. First, at the provincial level, we analyse repeated cross-sectional survey data collected since 2018. We examine (i) the internal coherence of the teaching-quality items, (ii) differences across schools, and (iii) recurring patterns in students' perceptions of instruction. The aim is not ranking schools, but documenting how student voice (when framed as formative feedback) can support improvement-oriented evaluation practices and strengthen a shared evidence base for decision-making (Datnow & Hubbard, 2015; Coburn & Turner, 2011). Second, we develop a school-level case study focusing on the Istituto Tecnico Tecnologico "G. Marconi" (Rovereto), which experimented with a more articulated approach to feedback and data use. Beyond the provincial aggregated reports, the school adopted procedures for teacher-level feedback reporting based on a survey instrument largely aligned with the provincial item battery, and complemented these quantitative data with qualitative documentation produced internally to justify, communicate, and support the practice. The case is examined as an instance of "boundary work" between accountability and professional learning, where data use is embedded in collegial discussion and transparency-oriented routines designed to enhance legitimacy and reduce defensive uses of evidence (Earl & Katz, 2006; Schildkamp, 2019). The school's documents and routines are analysed to highlight how local leadership mediates between evidence, interpretation, and decision-making, and how this mediation affects the perceived fairness and sustainability of evaluation processes (Paletta, 2014). Overall, findings suggest that student survey data can contribute to improvement, equity, and well-being goals only when they are translated into shared interpretive practices, supported by validated tools, and combined with qualitative evidence that contextualises results. The paper concludes by discussing conditions under which evaluation data may operate as a democratic resource for school communities (supporting professional responsibility and collective learning) rather than as a purely managerial device.

HOW DO SECONDARY SCHOOLS IN LIGURIA ASSESS THE WELL-BEING OF STUDENTS? POSSIBLE PATHS OF EQUITY, PARTICIPATION AND REDUCTION OF SOCIO-EDUCATIONAL RISK.

Graziella Arazzi (Ufficio Scolastico Regionale per la Liguria, Italy)

Equity | Social Responsibility | Training Direction

Priority question of the survey still in progress: between high schools, technical institutes and vocational institutes in the Liguria region are there substantial differences in the evaluation of area 2.5 of the Self-Assessment Report (RAV) with regard to the dimension "Outcomes in terms of well-being at school"? Strategies currently adopted: comparative analysis of the RAV of Technical and Professional Institutes and High Schools with regard to strengths and weaknesses in relation to the "Student Well-being" dimension. Lines of action envisaged: focus groups with a significant number of members of the schools' internal evaluation units; focus groups with groups of students in the three-year period of secondary schools; interviews with parents elected to collegiate bodies; interviews with territorial partners of the various institutes. From an initial analysis of the schools' strategic documents, conducted on the UNICA platform (Ministry of Education and Merit), the following scenario emerges: - Most schools in the evaluation of the "Student Well-being" dimension assign themselves a score of 5, without however disclosing the motivation for the chosen level. - Few upper secondary education institutions (with a prevalence of the professional address) are evaluated with level 3, reporting the presence of conflicts between students, lack of internalization of social interaction guidelines, difficulty in generating concrete inclusion processes. Paradoxically, however, these institutes do not develop priorities and goals with reference to the critical framework described and, consequently, do not indicate any strategy for possible improvement. - Among the various fields of study, particularly in the area of Genoa, the institutes that have adopted the recent technological-professional chain (4+2) are the schools that interpret the data (deriving from the teachers' questionnaire and school questionnaire) with greater accuracy, completeness and consistency and present, more frequently than high schools, the definition of priorities and goals on the "student well-being" dimension. - In particular, it is noted that these institutions, being part of a significant perspective of complexity, intervene on four paths, closely connected and related to "feeling good at school" by students: Modes of production of the psychophysical and social well-being of each student within the class and in the peer group of the whole institution (first-level well-being or well-being as a result). Preparation of formal situations and enhancement of informal experiences (surveyed by students in the Digital Portfolio on the UNICA ministerial platform) that allow the integrated acquisition of social-emotional and cognitive skills (Law 22/2025) and the experimentation of second-level well-being (well-being as an enabling factor of other dimensions of the subject: self-esteem and self-determination, motivation, resilience, self-efficacy, imagination of the future, reduction of states of anxiety and stress). Implementation of forms of distributed leadership and hybrid governance (by school-business-territory networks) of school-work training of students (third-level or system well-being, characterized by the co-presence of the following elements: open-mindedness, performativity, relationship with others, collaboration, emotional regulation). Generation and supervision of training effectiveness (authentic co-learning, personalization, direction of widespread reflexivity and proactive orientation).

SCHOOL SELF-EVALUATION DATA IN 'SCUOLA IN CHIARO (OPEN SCHOOL)' PLATFORM BETWEEN RIGOR AND PARTICIPATION: THE STUDENTS' PERSPECTIVE

Michela Freddano (Istituto nazionale per la valutazione del sistema educativo di istruzione e di formazione (INVALSI), Italy) · **Beba Molinari** (Università degli Studi di Roma Tor Vergata, Italy)

School Self-Evaluation | Accountability | Digital Transition

Technological development has impacted both the private and public sectors, presenting citizens and the administration with a revolution in language, communication and ways of operating (Schwab, 2017; Lamberti, 2018). The digital transition has brought about significant changes in the conduct of public life, making administrative procedures more streamlined and large amounts of data available for decision-making processes (Zawacki-Richter et al., 2019). Digitalisation has enabled the automation of processes, the creation of integrated information systems and the evolution of Artificial Intelligence also in education (Molinari, 2025). In public administration, the introduction of the principles of new public management and new public governance was aimed at making the public system more efficient, effective and sustainable, as well as ensuring greater transparency of processes and results for citizens, in line with the principle of accountability (Bovens, 2007). In this context, citizens' access to public services has increasingly been mediated by the use of digital platforms dedicated to the collection, production and dissemination of large quantities of data and information. This shift has also been observed with its implication in education and training policies (European Commission, 2020, 2021). In particular, this article focuses on "Scuola in Chiaro" (in English language "Open School", the portal of the Italian Ministry of Education and Merit, available at https://unica.istruzione.gov.it/portale/it/scuola-in-chiaro, containing detailed information on state and state-recognised schools. It had been launched in 2012 with the aim of helping families and students with guidance and the choice of school. Scuola in Chiaro is also the platform where strategic documents – such as the Self-Evaluation Report, the Three-Year Educational Programme and the Social Accountability Report – are published (Freddano, 2025), thereby bridging the gap between the National Evaluation System and students, families and, more broadly, the public. Our research focuses on users' perceptions of Scuola in Chiaro portal and, in particular, the quality of the data they perceive it to offer. To this end, an evaluative study was conducted involving a group of first-year undergraduate students enrolled on the Communication Sciences degree programme, who were asked to analyse the Scuola in Chiaro portal, either in groups or individually, according to specific criteria, and to present their findings using SWOT analysis. The students' reports were analysed qualitatively using MAXQDA software. The findings provide an original description of the self-evaluation tools of schools on Scuola in Chiaro portal, highlighting opportunities, constraints, strengths and weaknesses from the students' perspective, and offering useful suggestions for improving the services offered by the portal, with a view to making them increasingly accessible to its potential users, particularly the most direct ones, such as students and families. The results of this study also highlight that, in the evaluation of public policies, whilst methodological and scientific rigor is indispensable, participation represents a fundamental research tool for gathering evidence useful for guiding improvements to public services that are increasingly aligned with the real needs of their users.

When Research Becomes Policy Instrument: Academic Knowledge in Educational Governance and Possibilities for Resistance

PANEL CONVENORS: Magali Nonjon (Sciences po Aix, France); Ariane RIchard-Bossez (Aix-Marseille University, France)

PANEL KEYWORDS: Research instrumentalization, Educational governance, Resistance practices

Contemporary educational policies increasingly mobilize academic research not merely as a knowledge resource but as a legitimation and governance instrument. From evidence-based policy movements to partnership engineering programs, researchers find themselves embedded in policy-making processes that reshape educational problems while marginalizing populations ostensibly targeted for support. Convened by researchers examining educational policies in Mediterranean and European contexts, this panel invites critical analysis of how academic knowledge is instrumentalized within educational governance, and how researchers navigate, resist, or reproduce these dynamics. We welcome papers exploring: (1) research as legitimation device—how expertise validates policy choices, constructs "evidence-based" frameworks, or produces governance tools (evaluation grids, partnership standards, indicators); (2) research as engineering—when scholars are solicited to optimize coordination, design instruments, or arbitrate conflicts, blurring analytical and operational roles; (3) structural effects—how policy agendas structure research objects, marginalize critical perspectives, silence beneficiary populations, or depoliticize inequalities through technocratic framings. We particularly encourage contributions examining: educational partnership programs where research legitimates coordination imperatives while sidelining the structural dimensions of educational inequality and pedagogical questions; international assessment regimes (PISA, OECD) producing policy convergence; think tanks and consultancy markets positioning academic credentials strategically; comparative policy transfer processes; and reflexive accounts from researchers navigating commissioned work. By interrogating instrumentalization mechanisms, this panel also seeks to identify resistance possibilities: methodological choices that center marginalized voices, research designs refusing deficit framings, collaborative approaches challenging technocratic depoliticization, or analytical frameworks making power relations visible. How can educational research contribute to democratic transformation rather than reproducing inequalities through ostensibly neutral expertise?

RESEARCH-BASED SUPPORT IN A CITÉ ÉDUCATIVE: NAVIGATING UNCERTAINTIES AND THE DEMANDS OF PUBLIC COMMISSION

Laurie Genet (Cergy Paris Université, laboratoire EMA) · **Julie Pelathe** (Cergy Paris Université, laboratoire EMA; Insei, laboratoire Ghrapes) · **Audrey Boulin** (Cergy Paris Université, laboratoire EMA)

research-based support | Cité éducative | public commission

This contribution contributes to the reflection on the conditions under which educational research is practised when solicited through public commission. It examines two dynamics in particular: research as a legitimation device, whereby academic expertise validates political choices and produces governance frameworks (1), and the structural effects of commissioned research on research objects and critical perspectives (3). Through a reflexive account of a study conducted within a "Cité éducative", framed as "research-based support" (Prieur, 2020; Vinot, 2011), the paper analyses how the researchers navigated between institutional expectations, political legitimation logics, and the preservation of a critical stance (de Bernardy & Boisgontier, 1990). The contribution is structured around five phases. The first (2019–2022) is one of informal presence on the territory, without a clearly defined status in relation to the "Cité éducative". The second (2022–2023) marks the formalisation of a research proposal: meetings with the Troïka immediately reveal how the research is mobilised as a legitimation device — the researchers "auditioned", their expertise solicited to validate prevailing institutional injunctions, particularly around civic participation, elevated at that moment to a political criterion (Fouquet & Perriault, 2010). The third phase (2023) is one of ongoing adjustment of the scientific brief to the multiple and contradictory expectations of the commissioners, illustrating how political agendas shape research objects. The fourth (from January 2024), marked by integration into operational governance spaces, opens up forms of resistance: facilitating a technical committee shifts the evaluative logic towards reflexive co-elaboration, creating a space where divergent conceptions of participation can surface. The fifth phase, that of the current reporting modalities, closes this space: findings are delivered as an institutional written report, without co-elaboration, at a remove from the territory, embodying the expert-researcher dilemma inherent in commissioned research (Draetta & Labarthe, 2011) and risking the silencing of local dynamics within a document intented to the governance. In methodological terms, the research draws on observation of all steering bodies (project team, steering committee, technical committee) and collective assemblies since 2019,

co-facilitated reflection workshops with professionals, and interviews conducted across actors in the territory. This sustained immersion built a relationship of proximity with key informants, raising persistent ethical questions that will be discussed. Comparisons with other "Cités éducatives", also monitored as part of the research support program, will be provided. By combining an analysis of the research's genesis with a reflexive account of its conditions of practice, this contribution interrogates the mechanisms of instrumentalisation at work, as well as the forms of resistance the researchers were able to build: reframings, methodological choices, and commitment to spaces of shared reflexivity with professionals in the territory.

EDUCATIONAL POLICY INSTRUMENTS AND TERRITORIAL ATTRACTIVENESS: THE POLITICAL DIMENSION OF EDUCATIONAL ACTION TOOLS

Aude-Line Gervais (Aix-Marseille Université, France)

public policy instruments | territorial attractiveness | education policies

Public policy instruments are often presented as technical, neutral, and depoliticized tools. However, following the sociology of policy instruments (Halpern et al., 2014; Lascoumes & Le Galès, 2004; Lascoumes & Simard, 2011), this paper argues that they carry political rationalities that orient public action. Drawing on fieldwork conducted in Marseille between 2020 and 2024, it examines how three educational instruments—the school catchment system, “elite linguistic sections,” and the educational component of the Marseille en Grand plan—contribute to the construction of territorial attractiveness. These instruments are embedded in a neoliberal framework that promotes performance, competitiveness, and inter-territorial competition (Brenner & Theodore, 2002; Harvey, 1989). The analysis shows, however, that the effects of these instruments are neither mechanical nor homogeneous. Their scope depends on how local actors use them, in connection with power relations and territorial strategies. Some instruments, such as the school catchment system, particularly illustrate this plasticity. Introduced in 1963 as a rational tool for managing student flows (Van Zanten & Obin, 2010), it has gradually become, in the context of the territorialization of educational action (Frandji, 2017), a political instrument mobilized differently depending on local contexts: at times a lever for combating segregation, at other times a tool serving the production of social and school homogeneity. The analysis of two different catchment boundaries adopted for the same school—first in 2019 and then in 2021 by two different municipal majorities—highlights the political dimension of this instrument (Gervais & Audren, 2022). This dimension lies not only in the intentions behind its initial design but also in the situated practices that shape its uses (Francou & Mavrot, 2020). This paper thus aims to shed light on the political dimension of educational policy instruments through an empirical approach. It will also outline a reflection on the engaged dimension of such a research posture, questioning the position of the researcher when studying instruments that contribute to the production of educational inequalities. The methodology relies on a qualitative approach combining several elements: semi-structured interviews (n=74) with a wide range of local educational actors; analysis of grey literature and administrative documents; field observations; and cartographic analysis of the instruments studied. This diversity of materials makes it possible to capture the logics embedded in the instruments, their conditions of implementation, and the variability of their uses. Rooted in the geography of education, this research adopts an interdisciplinary perspective and draws on tools and concepts from the sociology of public action.

ACADEMIC RESEARCH AS AN ADDITIONAL PARTNER IN LOCAL EDUCATIONAL ACTION: INSTRUMENTALIZATION VS. REFLEXIVITY?

Cintia Indarramendi (université paris 8, France)

Educational public policy evaluation | Public sociology | Research–policy partnerships

At least three processes are currently pushing social science researchers to become involved in the evaluation and support of public action in education. The first two are closely linked to contemporary public management. On the one hand, they refer to results-based management and to the growing expectation that public policy should be guided by measurable objectives, which research is expected to help assess. On the other hand, the academic world itself is increasingly required to produce "results," a requirement that translates into budgetary constraints on research and into the expectation that researchers secure their own funding through competitive calls for projects. These calls are supposed to foster more "efficient" research, better aligned with social needs. A third process is also likely at work, one that is more specific to the academic world and to sociological research. In its effort to establish its legitimacy as a science, sociology has long emphasized a distanced stance vis-à-vis action (Durkheim, 1895). Having already demonstrated its scientific validity, it now increasingly allows itself to become an "engaged" form of research (Burawoy, 2021)—one that seeks to associate with public action or even to take part in it, as is the case with participatory research and action research. What are the stakes of research work that becomes an additional partner in partnership-based public policies? What are the possibilities for such "engaged" research to become a genuine tool of reflexivity for practitioners in the field? What are the risks of instrumentalization and of losing the rigor required for the production of knowledge within a specific scientific field? We have been confronted with these questions (and continue to be), as we are involved in the evaluation processes of six Cités éducatives. The Cités éducatives (CE), implemented experimentally in 2019 and significantly expanded in 2022 and again in 2025, are a French national policy label targeting disadvantaged urban areas. They are structured around three strategic objectives: strengthening the role of schools; promoting educational continuity; and expanding horizons and opportunities. These objectives are translated into territorial goals and then into annual action plans targeting children and young people aged 0 to 25. At the heart of this initiative lies the imperative to opening schools to external partners and foster connections among all local educational stakeholders. The tripartite governance structure (communal authorities, national education system, and State) is a representative example of this imperative. As academic evaluators, we are thus one partner among others, expected to contribute to shaping local public policy. In this paper, we propose a reflexive account of the research-evaluation process. After briefly presenting the Cités éducatives label and our methodological approach, we analyze two concrete fieldwork experiences. The first concerns attempts to exert control over data, analyses, and publications. The second examines a feedback process aimed at deconstructing practices, which ultimately ends up standardizing action. These two cases allow us to highlight the risks inherent in such partnerships, while also reflecting on the potential contributions of engaged research.

PLAYING BOTH SIDES? BETWEEN REQUESTS FOR EXPERTISE AND SOCIOLOGICAL RESEARCH: OPPORTUNITIES AND CONSTRAINTS FOR EDUCATION RESEARCHERS

Renaud Cornand (Aix Marseille Université, France) · **Ariane Richard-Bossez** (Aix Marseille Université, France)

education policies | evaluation | expertise

Since the 1980s, the demand for expertise in school policy has grown significantly (Poupeau, 2003), contributing to the shaping of sociological research questions in line with administrative evaluation requirements. In seeking to legitimize implemented measures through “ever faster evaluations,” the contemporary mode of policy-making described by Xavier Pons (2024) as “fast politics” has reinforced this trend. Through their control over funding and, to some extent, access to the field, institutional sponsors participate in constructing research topics in order to identify “good practices” (Pons, 2024). Research is thus expected to be useful, but "asking sociology to serve a purpose is always a way of asking it to serve power. Whereas its scientific function is to understand the social world, starting with the powers that be” (Bourdieu, 1980). Furthermore, legitimizing sociology as a tool for public action in education may simultaneously delegitimize it as an “autonomous” scientific practice – one in which problems are determined and addressed without outside interference " (Saint-Martin, 2023). At the same time, in a context marked by increasing precariousness in social science research (Harari-Kermadec, Sargeac, and Noûs, 2020), laboratory teams cannot afford to stay away from the financial opportunities provided by evaluation contracts – as they fund PhD and post-doctoral researches, research engineers etc. In this presentation, we will reflect on a position we adopted over ten years of studying educational policy measures in France: we are both experts responding to the immediate questions of institutions and sociologists, basing our work on the production of knowledge specific to scientific research. We will draw in particular on our research experience on two programs (Barrère, 2013): Cordées de la réussite and Parcours d'excellence, which we investigated between 2008 and 2019. We will explain how this dual role led us to differentiate our modes of expression according to context: using simplified language and fewer scientific references during interactions with institutional actors and in evaluation reports; using the data collected for research purposes within our laboratory and in scientific publications. We also shared our research findings with other types of stakeholders - trade unions, elected officials, and community activists. In these contexts, our research contributed to revealing “the reality of asymmetries, inequalities, relationships of domination and exploitation, the exercise of power, and processes of stigmatization” (Lahire, 2016).

COLLABORATIVE RESEARCH APPROACHES – OPPORTUNITIES FOR THE PRACTICAL IMPLEMENTATION OF RECOMMENDATIONS

Haxhere Zylfiu (Kosovo Pedagogical Institute, Kosovo)

educational policies | partnerships | practices

Adult education (AE) in Kosovo is a topic that is continuously addressed within the research activities of the Kosovo Pedagogical Institute (KPI). There are seven research reports published, either as separate publications or as part of the annual journal ‘Kërkime Pedagogjike’. Based on the findings, specific recommendations have been provided, referring to the role and responsibilities of stakeholders. The aim of the research was to identify whether the recommendations arising from the studies conducted by the KPI on AE have been considered for the advancement of AE policies and practices in Kosovo. A qualitative research approach was used for this study, based on the descriptive model, with analysis of policy documents, evidence of practices, and legislation on AE. The content was supplemented with narrative analysis –semi-structured individual interviews conducted with nine representatives of the responsible institutions. A Checklist,

Content Analysis Protocol and Interview Protocol were use for data collection, analysis and interpretation. The collection, analysis and documentation of data was on the model presented by Philipp Mayring (2014). The results showed that there is both implementation and alignment of the recommendations from KPI studies on AE with policy priorities for advancing this component. However, a challenge remains the lack of explicit referencing to the findings and recommendations of the respective studies. Positive perceptions among key actors regarding the importance of KPI's recommendations for the advancement of AE along with their concrete guidance on how these recommendations can be better and more successfully implemented in future AE policies and practices, represent an important and encouraging indicator for progress. There is still much to be done in building a culture and sense of responsibility for the demonstrated implementation of recommendations in policymaking and in improving AE practices. A research–practitioner partnership approach in studies could help align needs and enable more effective implementation of recommendations in the policies and practices related to this component.

ECOSYSTEMIC MAPPING AS A DEMOCRATIC RESEARCH PRACTICE: BEYOND THE LEGITIMATION OF EDUCATIONAL GOVERNANCE

Alberto Righi (University of Macerata) · **Arianna Taddei** (University of the Republic of San Marino)

Ecosystemic Mapping | Educating Cities | Territorial Participation

In recent decades, research has progressively been incorporated into the educational governance of public policies, assuming a role in legitimizing policy decisions and producing technical instruments (Osborne et al., 2013). Within this framework, the growing emphasis on territorial coordination mechanisms has contributed to reinforcing forms of technocratization in educational policies (Aydarova, 2021), sometimes accompanied by the marginalization of the voices of those targeted by such interventions (Aydarova & Berliner, 2018; Biesta, 2007). In this context, paradigms such as the Educating City, promoted by the International Association of Educating Cities, and the Learning City, promoted by UNESCO, were originally developed to foster lifelong learning, participation, and democratic education (IAEC, 2020; UNESCO, 2014). However, in several contexts these paradigms risk being mobilized as symbolic frameworks within urban development strategies and urban branding policies (Facer & Buchczyk, 2019). Starting from this tension, the paper proposes a reinterpretation of these paradigms through the adoption of an ecosystemic territorial mapping methodological device (Velez et al., 2025). Inspired by the ecological model of human development developed by Urie Bronfenbrenner (Bronfenbrenner, 1979; Rahman, 2025), this tool aims to reconstruct the relationships between actors, institutions, and educational practices within a territory, integrating formal, non-formal, and informal learning and privileging a bottom-up methodological perspective (IAEC, 2021; Velez et al., 2025). Ecosystemic mapping is not conceived here as a mere technical tool for planning or administrative efficiency. Rather, it is understood as an investigative practice capable of making visible the interdependencies between territorial actors, power asymmetries, and the blind spots of local educational policies (Velez et al., 2025). The paper argues that ecosystemic mapping can transform a practice frequently used in territorial governance into a reflexive device oriented toward democratic participation. Through the involvement of local actors and the valorization of distributed educational practices, this approach enables the re-centering of marginalized voices within processes of defining territorial educational agendas (Nation et al., 2020). From this standpoint, educational research is reinterpreted not as a simple technical support for governance, but as a critical practice capable of contributing to the construction of more participatory and inclusive educational ecosystems (Akiva et al., 2020).

RESEARCHING AN ELITE INSTITUTION FROM WITHIN: A REFLEXIVE PERSPECTIVE ON SCIENCES PO PARIS

Alice Pavie (Université de Nantes, CREN, France) · **Mathieu Rossignol-Brunet** (Université Bourgogne Europe, IREDU, France) · **Marco Oberti** (Sciences Po Paris, CRIS, France)

Education policies | Educational governance | Elite education

Sciences Po Paris is a prestigious French higher education institution—a grande école—and a key site for the training of the country's political and administrative elites (Parodi, Périvier, Larat, 2023). For the past fifteen years, we have conducted research on this institution from the perspective of the sociology of educational inequalities (Oberti, Sanselme and Voisin, 2010; Oberti, 2013; Oberti and Pavie, 2020; Rossignol-Brunet et al., 2022; Pavie et al., 2024). In 2022, at the request of the institution, we began an evaluation of a reform of the admission procedures to this highly selective institution. In this paper, we adopt a reflexive perspective on our position as researchers in relation to the institution and its transformations, as well as on the ways in which our work has been received and used within it. The case of Sciences Po is particularly noteworthy because the institution grants its own researchers extensive access to administrative data, an arrangement that has no equivalent in the French higher education landscape and that therefore deserves analysis in its own right. The numerous studies produced on the institution have been appropriated internally, though not always at the highest levels of the institutional hierarchy. While our findings were initially expected to inform governance and decisions regarding admission procedures—particularly with a view to reducing social, territorial, and gender inequalities—a new reform of the entrance examination was ultimately introduced alongside the publication of our report (Oberti, Pavie and Rossignol-Brunet, 2024), moving in the opposite direction to our recommendations. This paper seeks to shed light on this apparent paradox by highlighting the political, media, and institutional dynamics at stake. In particular, we emphasize the key role played by successive directors of the institution in shaping responses to this research, ranging from integration to rejection or indifference. Lobbying by various pressure groups—most notably the principals of elite Parisian high schools—also contributed to steering the reform in a direction contrary to our findings and recommendations. This occurred despite the fact that some actors within the institution (including student representatives and members of the administration) mobilized our results in an attempt to influence internal power relations. We nevertheless show that it was possible to preserve both our scientific agenda and the conduct of our research, thanks to the guarantees provided by our institutional status and the protections established by the formal agreement governing the project.

ORDERING THE RESEARCH, RESEARCHING THE ORDERS. TURNING FUNDING-RELATED OBSTACLES INTO HEURISTIC ELEMENTS

Raphaël Godefroid (Aix-Marseille Université, France)

pressure on research · academic freedom · young researchers

In recent years, many new forms of funding for research in social sciences have emerged and grown quickly. Those contracts can be with either public or private actors and can sometimes entail the obligation to work part-time for the funding organization, in the case of the so-called “CIFRE” contracts (Gallenga & Pesle, 2023). In the context of a constant slashing of public funding for research and the installation of a management culture (Noûs, 2020), those contracts and the working conditions they imply are to be urgently examined. I am myself employed through one of those contracts and participate in a group of young PhD candidates working of the question of research under funding from non-academic institution. Expanding on those experiences, I will try to demonstrate that the change in the research conditions for many young researchers can have serious negative consequences on their academic work. Moreover, some topics of research have been particularly prone to tie very close links between the academic and professional worlds. This is the case of research in education, where funding often comes from institutions that are themselves the fields of investigation in scientific studies (Poupeau, 2003). Our best way out may in fact be to turn the tables on the situation and regard the ordering of research as data documenting the state of the field which is investigated. Using ethnographical material from my own ongoing investigation in France, I will offer a case study showing that difficulties in doing research due to interference from external actors can be turned into heuristic elements, revealing unsuspected material that could otherwise have been overlooked. This is therefore an attempt to offer a contribution to a sociological analysis of the hindrances of the sociological research (Darmon, 2005).

OPERATIONALIZING EDUCATIONAL DISADVANTAGE: SOCIAL INDICES AND GOVERNANCE INSTRUMENTS IN THE STARTCHANCEN PROGRAMME

Lea Wistuba (University of Siegen) · **Livia Jesacher-Rößler** (Friedrich-Alexander University Erlangen-Nuremberg) · **Sebastian Hösch** (Friedrich-Alexander University Erlangen-Nuremberg) · **Charlotte Assmann** (Friedrich-Alexander University Erlangen-Nuremberg) · **Anne Julia Klein** (Friedrich-Alexander University Erlangen-Nuremberg) · **Nina Bremm** (Friedrich-Alexander University Erlangen-Nuremberg)

Educational Governance · Social Indices · Educational inequality

Problem Educational inequality has long been a central concern in European education policy. In response, governments increasingly develop evidence-informed administrative instruments—such as school social indices—to identify disadvantaged schools and guide targeted interventions. A prominent example is the German Startchancen Programme (SCP), launched in 2024, supporting about 4,000 disadvantaged schools across Germany. A key governance mechanism concerns the selection of participating schools. According to the Startchancen programme federal–state agreement, states may rely on a school social index or define selection criteria covering poverty and migration. A school social index (SSI) aggregates multiple indicators of disadvantage into a composite score through a defined calculation procedure, enabling systematic comparison and prioritization of schools. By contrast, sets of indicators (SoI) or selection criteria consist of individual variables used separately (Weishaupt, 2016). In Germany’s federal system, where each state develops its own approach, this leads to different operationalizations of disadvantage and varying understandings of which schools require targeted support. Purpose This paper presents the first step of a longitudinal policy analysis. It reconstructs the governance instruments used across the federal states, distinguishing between aggregated SSI and SoI. Thus, it analyses how disadvantage is operationalized within the Startchancen Programme (1), for which policy purposes the indicators are used (2), and how these instruments are institutionally embedded (3). Theoretical perspective Educational disadvantage

is widely understood as a multidimensional phenomenon shaped by intersecting social positions such as socioeconomic background, migration history, language, and spatial inequalities (Walgenbach, 2012). These dimensions influence students' educational opportunities and learning conditions. In education policy, such constellations are translated into administrative indicators (e.g. social indices) that operationalize disadvantage by selecting and combining measurable dimensions. To examine the normative implications of these operationalizations, the analysis draws on Nancy Fraser's three-dimensional conception of social justice (Fraser, 1995; 2010), distinguishing between redistribution, recognition, and representation as key dimensions of educational equity. Methodology The study draws on a comparative document analysis of legal and administrative regulations (Prior, 2003). Publicly available policy documents and legal regulations were systematically collected and compiled in a comparative matrix capturing key features such as indicator composition, weighting procedures, and policy purposes. To analyse how educational disadvantage is operationalized, the SSI and SoI were examined using qualitative content analysis (Kuckartz & Rädiker, 2024). The coding scheme was developed inductively and deductively based on theoretical perspectives on multidimensional disadvantage. Findings and Discussion The analysis reveals a heterogeneous landscape across federal states. While all states address the dimensions of poverty and migration required by the federal–state agreement, not all used SSI. Across states, disadvantage is primarily operationalized through indicators related to socioeconomic conditions and migration, sometimes complemented by individual date like learning outcomes. However, indicator selection and weighting vary considerably, leading to different constructions of which schools and student populations are considered disadvantaged. These variations illustrate how multidimensional educational disadvantage is translated into distinct data-led administrative instruments and underline the importance of policy design for understanding the equity implications of educational reforms, while also questioning the effectiveness of such large-scale measures.

GOVERNING SKILLS THROUGH QUALITY: KNOWLEDGE, DATA INFRASTRUCTURES AND THE POLITICS OF EUROPEAN VET COORDINATION

Concetta Fonzo (Istituto Nazionale per l'Analisi delle Politiche Pubbliche (INAPP), Italy) · **Laura Evangelista** (Istituto Nazionale per l'Analisi delle Politiche Pubbliche (INAPP), Italy) · **Eleonora Zecca** (Luiss, Italy)

knowledge-based governance | policy instruments | quality VET

In recent years, the governance of Vocational Education and Training (VET) in Europe has increasingly relied on quality assurance frameworks, indicators and evidence-producing infrastructures (European Commission, 2019; Cedefop, 2007). Instruments such as the European Quality Assurance Reference Framework for Vocational Education and Training (EQAVET), benchmarking mechanisms and skills tracking systems have expanded the role of knowledge in shaping educational policy (Cedefop, 2023; European Commission, 2019). Within this evolving landscape, research and data do not merely inform policy decisions; they actively contribute to the construction of policy problems, priorities and legitimate solutions (Ozga, 2009; Ball, 2012). This paper investigates how knowledge production operates as a governing mechanism within contemporary European VET policy. Drawing on recent strategic and technical documents - including the European Commission's Union of Skills communication, EQAVET network materials and Cedefop research reports - the study examines how quality assurance and evidence-based coordination contribute to the regulation and alignment of national education systems (Cedefop, 2021; Baltiņa et al., 2025). Rather than assessing policy effectiveness, the analysis focuses on how policy knowledge frames educational challenges and structures the range of acceptable interventions, by explicitly foregrounding the role of research and academic knowledge. Methodologically, the study adopts a multi-layered

qualitative design integrating thematic document analysis, critical policy discourse analysis and insights from interpretive policy studies (Schwartz-Shea & Yanow, 2013; Fairclough, 2023). The empirical corpus includes European policy communications, quality assurance guidelines, network reports and analytical studies produced between 2005 and 2025. The analysis proceeds in three stages: first, thematic coding identifies recurring policy categories such as quality gaps, performance and skills shortages; second, discourse analysis explores how these categories stabilize specific rationalities of governance, emphasizing competitiveness, adaptability and labour-market alignment (Fairclough, 2023); third, drawing on the sociology of policy instruments, the study examines how quality assurance mechanisms - such as EQAVET peer review cycles and benchmarking indicators - function as knowledge infrastructures that render heterogeneous national systems comparable and governable (Lascoumes & Le Galès, 2007). The findings suggest that quality frameworks increasingly operate as cognitive and institutional infrastructures for policy coordination. Through standardized indicators, monitoring systems and peer learning processes, instruments such as EQAVET facilitate forms of “soft governance” based on shared metrics and comparative knowledge rather than formal legal harmonization. In this context, research performs a dual role: it provides analytical insight while simultaneously shaping the categories through which educational problems are defined and addressed. These developments raise important questions about the politics of education governance. Structural inequalities risk being reframed as technical issues of skills deficits or quality improvement, while the growing reliance on indicators and data infrastructures reinforces technocratic forms of policy coordination. At the same time, the flexible architecture of frameworks such as EQAVET leaves room for more reflexive and participatory approaches to knowledge production and policy evaluation.

Which (Democratic) Professionalism in Neoliberal Times?

PANEL CONVENORS: Laura Cataldi (University of Salerno, Italy); Willem Tousijn (University of Turin); Fiorella Vinci (eCampus University)

PANEL KEYWORDS: Democracy, Professionalism, Neoliberalism

This panel explores the role of professionalism within contemporary public services (including education) and public governance, interrogating whether it may operate as a protective factor for equity, justice, and democracy, or instead as a vehicle of dominance and institutional violence. The reflection is situated within neoliberal times, marked by inequalities, individualization, and de-politicization. Professionalism remains key as a form of social organization and a mode of regulating work and society. Public governance relies on professional bureaucracies and on various professionals working across public, third-sector, and for-profit networks. Both governance and professionalism have undergone significant transformations: Hybrid governance arrangements, where managerialist logics are dominant, coexist with a professionalism that has shifted from traditional or occupational models to organizational and hybrid ones. Recent debates on democratic professionalism (Dzur 2008, 2021; Lethbridge 2019) highlight its aspirational capacity to build bridges with citizens and foster more responsive services. Thus, under which conditions can professionalism be a way of "doing democracy," by countering the multiple forms of counterintuitive and discriminatory welfare? An element worth considering is the educational dimension inherent in all professions. Professional practice entails the transmission of knowledge from "expert" to "lay" individuals. Frequently legitimized in the name of the public interest or improved outcomes, this role often exceeds specific literacies and extends to broader orientations and conduct, reinforcing asymmetries, paternalism, and forms of institutional domination. The panel welcomes theoretical and/or empirical contributions addressing different sectors, from diverse disciplinary backgrounds and methodological approaches, focusing on the Italian case or other national contexts.

RESEARCH AND EDUCATION, AN INTEGRAL APPROACH TO DEMOCRACY

Mieke Vos - Van der Linden (Utrecht University of Applied Sciences, Netherlands, The)

Democracy | social cohesion | education

Globally, the foundations of democracy and the rule of law are under pressure. The number of democratic states governed by the rule of law is declining, and support for the international legal order, and thus for organizations like the European Union, the United Nations, and NATO, is proving fragile. Geopolitical allies, essential for peace and security, are no longer a given now that national governments around the world are experiencing pressure from or falling prey to (extreme) right-wing political movements. Big Tech and GenAI and their rising power play a crucial role in these developments. Trust in government, democracy, and politics continues to decline, which is strengthened by an increase in affective polarization: people increasingly view others as opponents and even enemies, simply because they belong to a different group. While social cohesion does exist, it's often within their own bubble of like-minded people. Affective polarization reinforces populist and authoritarian tendencies, further undermining the fundamental principle of the democratic rule of law: checks and balances. Citizens do not longer have a shared definition of democracy. One segment of society sees democracy as the majority determining policy and which institutions have a right to exist, while another segment sees democracy as inextricably linked to the rule of law, meaning that minority interests are also protected, and the concept of checks and balances is crucial to ensuring that powers monitor and balance each other. This form of polarization shifts the political and social debate from cooperation to conflict, making the government increasingly perceived as rudderless. However, how do we come into grip of this destruction of democracy? Where to begin with turning the tide? Is there a way to build a resilient democracy for the future? This paper searches for answers to these fundamental questions by shedding light on education, more specifically higher education. Central research question of this paper is how higher education can contribute to ensure that (future) residents are (more) involved in democratic decision-making, while simultaneously strengthening social cohesion as an essential condition for the sustainable functioning of an inclusive democratic legal order? The main purpose – and the theoretical framework – of the paper is to show in which way practice-based research can be integrated into education and teaching (methods) in higher education, more specifically on the level of Universities of Applied Sciences. Teachers should get the tools to convey and disseminate democratic values to the next generation of professionals, that is responsible for the resilience of our democracy now and in the future. The paper departs from a Dutch point of view, but also tries to extend the answer to the central question to the European and international level.

AI AS POLICY INSTRUMENT: TECHNOCRACY, DATA, AND DEMOCRATIC LEGITIMACY IN PUBLIC ADMINISTRATION

Dimitri Ruggeri (Independent Researcher, Italy)

Artificial Intelligence | Algorithmic Governance | Democratic Legitimacy

The digital transformation of public administration is often promoted in terms of efficiency and modernization, yet its ethical and democratic implications remain insufficiently examined. This paper presents an experimental project on the ethical deployment of Artificial Intelligence (AI) across public sector decision-making, a field exposed to integrity risks, procedural complexity, and fragmented data infrastructures. The project proposes a model of "assistive AI" designed to enhance transparency, anomaly detection, and accountability without replacing human decision-making. The framework incorporates natural language processing (NLP) for automated document analysis, interpretable red-flagging systems for identifying irregularities, distributed ledger technologies for traceability, and public-facing dashboards to support civic oversight. Mandatory human supervision, algorithmic registries, and dual-layer rights to explanation—technical and civic—ensure AI operates as a support tool rather than a substitute for officials. A comparative reflection considers the case of "Diella," an avatar introduced in Albania as a digital minister for administrative oversight. While symbolically innovative, this example raises concerns about the personalization and depoliticization of algorithmic authority. In contrast, the proposed model emphasizes distributed institutional responsibility, structured oversight, and participatory governance, aligning with international initiatives such as the UK Ministry of Justice's collaboration with the Alan Turing Institute on responsible AI in judicial systems. Empirical evidence is drawn from a panel italian survey of public administration professionals and stakeholders (n=408), designed to assess perceptions of AI's role in governance. Results indicate moderate trust in institutions, high demand for transparency in automated decisions, and strong opposition to fully automated decision-making without human oversight. While AI is perceived as a tool for improving integrity and efficiency, legitimacy is conditional upon explainability, auditability, and robust accountability mechanisms. Public acceptance correlates positively with transparency, contestability, and reversibility. Preliminary pilot outcomes suggest improved

anomaly detection, enhanced traceability of administrative processes, and increased accessibility of information for stakeholders. Persistent challenges include fragmented data systems, organizational resistance, and potential technological dependencies. The study concludes that democratic renewal under algorithmic governance depends less on computational sophistication than on the design of accountability architectures. AI can strengthen integrity, transparency, and public trust only if embedded in open, auditable, and participatory frameworks. The key challenge is not whether algorithms can make decisions more efficiently, but whether institutions can govern algorithmic power in ways that preserve human responsibility, plural oversight, and democratic legitimacy.

PROFESSIONALISED SCHOOL GOVERNANCE AND THE EVACUATION OF POLITICS: RECLAIMING PARENTAL VOICE IN MULTI-ACADEMY TRUSTS IN ENGLAND

Karen Healey (University of Manchester, United Kingdom)

governance agonism corporatisation

The expansion of the academies programme in England since 2000 has profoundly reshaped school governance, particularly through the growth of Multi-Academy Trusts (MATs). As schools move from local authority oversight to trust-based control in the form of MATs, traditional stakeholder models of governance grounded in election, parental representation and local democratic accountability, have increasingly been displaced by professionalised forms framed by managerialism and corporatisation (Healey, 2024; Wilkins 2017). These emphasise risk management, performance metrics and skills-based appointments. This transformation raises a central question aligned with this panel: under what conditions does professionalized governance protect democracy, and when does it operate as a vehicle of dominance and depoliticisation? In the context of MATification, I argue that professionalisation is frequently mobilised as a technology of managerial control rather than as a democratic resource. Executive leaders and trustees consolidate authority through appeals to expertise, compliance and corporate responsibility, while parental and community actors are repositioned as consultative or symbolic participants. Drawing on Mouffe's (1999) theory of agonistic pluralism, I conceptualise school governance as an inherently political space structured by competing values and interests. However, organisational and hybrid forms of professionalism within MATs often reframe political disagreement as risk, inefficiency or reputational threat. Governance is cast as a technical practice oriented towards consensus and performance, rather than as a forum for contestation and value negotiation. Empirically, the paper draws on interviews and observations from an ethnographic study of three MATs. I illuminate how professionalised governance structures privilege managerial authority over democratic deliberation and narrow the space for dissent. Parental engagement is frequently repurposed as a mechanism for securing legitimacy and compliance, rather than enabling meaningful participation in decision-making. In this context, parents are positioned less as democratic actors mediating competing claims and more as recipients of professional judgement. These dynamics foreground the educational dimension inherent in professionalism. Professional practice involves the transmission of knowledge from "experts" (executive leaders, governance professionals, trustees) to "lay" actors (parents and communities). Legitimated in the name of public interest or improved outcomes, this pedagogic function extends beyond technical matters to shaping expectations, orientations and acceptable forms of conduct. Under neoliberal conditions marked by individualisation and depoliticisation, such processes risk reinforcing asymmetries, paternalism and subtle forms of institutional domination. Against these trends, I mobilise agonistic pluralism to reimagine democratic professionalism in school governance. Rather than treating conflict as dysfunction, an agonistic approach understands disagreement as constitutive of democratic life. I (argue for reopening political space within MAT governance through parent-led bodies with genuine decision-making authority, publicly accountable forums that legitimise contestation, and collaborative policymaking processes that recognise dissent as a democratic necessity. The paper contributes to debates on profes-

sionalism in contemporary public governance by showing how organisational professionalism within hybrid governance arrangements can both enable and constrain democracy. It reframes parental engagement as a contested political space shaped by asymmetrical power relations and invites reflection on how professionalism in education might move from being a vehicle of depoliticisation to a practice of “doing democracy” in neoliberal times.

PROFESSIONALISM, SOCIAL SERVICES AND THE POLITICAL ROLE OF SOCIAL WORKERS IN WELFARE ORGANIZATIONS

Maria Pia Castro (University of Catania, Italy)

Professionalism | Social worker | Welfare Organizations

Over time, sociological debate has highlighted the relationship between professions and the State as a key element in the development of Western societies and their institutions. During the twentieth century, alongside traditional ‘occupational professionalism,’ a new ideal of ‘organizational professionalism’ developed, characterized by rational forms of authority, the standardization of working practices, and the attribution of responsibilities from outside professional groups. More recently the term "hybridity" has been used to relate the coexistence of different combinations of strands of professionalism and organizational principles within public organizations. Hybridization arises when professional and managerial principles converge, requiring professionals to reconcile competing institutional logics and to act as bridges between them. From an institutional perspective, professions are seen as "vectors of the institutional democratic project" since, when professionalism operates coherently, it contributes to shaping and consolidating the institutional design of democratic society. Professionalization is part of broader processes of institutionalization: professions are themselves institutions and view organizations as the primary vehicles for carrying out institutional work, implementing reforms (which are manifestations of institutional change), and shaping the role identities of professionals (which, in turn, represent institutional stability). Professions can also be understood as the trait d’union between social rights (such as health, defense, information and social assistance) and their effective protection. Institutional theory also highlights the growing relevance of hybrid professional roles in the public sector, where professional and managerial logics intersect and must be negotiated. Within bureaucracies, professions become crucial when decisions require specialized knowledge and value-based judgment, as well as technical expertise grounded in both abstract knowledge and experiential learning. In fields such as social work, professionalization has historically been intertwined with organizational development. In Italy, the recent introduction of the LEPS – Livelli Essenziali delle Prestazioni Sociali, has defined essential social services that must be guaranteed nationwide. This reform has also led to the recognition of professional social work and professional supervision for social workers as LEPS. While social work is expected to assume a stronger role in organizational decision-making, professional supervision is assigned a strategic institutional function, aimed not only at supporting practitioners and preventing burnout, but also at enhancing their capacity to influence decision-making and to negotiate with their organization on technical and methodological matters. An analysis within professional supervision processes involving social workers in Sicilian Local Social Areas in the Sourthen Italy has been carried out, to highlight working practices and organizational dynamics in public social services, which affects institutional change and its development, as well as the transmission of established operational practices from senior social workers’ to younger practitioners. The results reveal limited awareness of social workers’ organizational role, highly bureaucratized contexts that constrain their perceived influence, and a professional identity experienced as restricted within rigid and resistant systems. These results point to the need for further investigation into the relational dynamics between professionals and organizations in order to strengthen the organizational role of social workers.

GOVERNING SUFFERING. GENEALOGY OF NEOLIBERAL RATIONALITY IN TERRITORIAL MENTAL HEALTH SERVICES: THE EMILIA-ROMAGNA CASE

Leandro De Padua (Univesrity of Bologna, Italy)

neoliberal governmentality | psychiatry | Foucault

This work investigates how neoliberal rationality is reshaping institutional mandates and clinical practices within Italy's public territorial mental health services, drawing on an empirical case study of the Emilia-Romagna region. Italy was the first country to legislate the closure of asylums (Law 180/1978), establishing a community-based psychiatric model centred on territorial Mental Health Centres. Emilia-Romagna played a pioneering role in this process and remains among the best-resourced regions nationally, making it a critical case: if structural tensions between care and managerial logic manifest even in a context of relative excellence, the phenomenon acquires systemic rather than contingent significance. The theoretical framework combines Foucauldian genealogy with materialist analysis. From Foucault's lectures on biopolitics and governmentality, the study draws the concept of neoliberalism as a rationality that governs through freedom, structuring the field of possible action rather than imposing direct constraints. This lens is integrated with Chapman's neurodivergent Marxism, which grounds the genealogy of normality in material structures, Castel's analysis of risk management and the post-asylum reconfiguration of the psychiatric apparatus, Rose's account of governing through community and the production of autonomous, responsibilized subjects, and the contributions of Brown, Dardot and Laval on neoliberal subjectivation. Methodologically, the research employs a qualitative exploratory design based on a single holistic case study. Data were gathered through four semi-structured in-depth interviews with strategically sampled key informants positioned at different levels of the apparatus — governance, clinical practice, and civil society — and through the analysis of regional institutional documents treated as artefacts of managerial rationality. The analysis follows Braun and Clarke's thematic analysis within an abductive logic. The findings reveal that neoliberal rationality does not operate through frontal opposition to the logic of care, but through subsumption. The managerial grammar of performance indicators renders relational care invisible: what resists quantification tends to disappear from institutional visibility. Structural resource scarcity, the decline of territorial outreach, and the transformation of Mental Health Centres into predominantly outpatient services are experienced not as externally imposed constraints, but as internalized conditions — precisely the mode of governing through freedom that Foucault theorized. Furthermore, the institutional adoption of the recovery paradigm, while retaining emancipatory potential when grounded in material conditions and egalitarian relationships, simultaneously functions as a vehicle for the subsumption of neoliberal logic, shifting the burden of care from public services to families and the third sector and risking the responsibilization of individuals for structural failures. Finally, the analysis identifies a paradox of resistance: operators' capacity to deliver quality care despite structural constraints may inadvertently stabilize the very apparatus they contest, insofar as the system need not change while good clinical work continues to mask systemic inadequacies.

SOCIAL WORK EDUCATION AT THE CROSSROADS: PROFESSIONAL IDENTITY, NEOLIBERAL GOVERNANCE, AND THE CHALLENGE OF DEMOCRATIC PROFESSIONALISM

Alessia Brunetto (University of Turin, Italy)

Social Work Education | Neoliberal Governance | Democratic Professionalism

The research examines the transformation of Masters in Social Work as a critical lens through which to observe the tensions of contemporary professionalism in neoliberal times. The study investigates how welfare transformations, marked by economic constraints and rising social complexity, retroact upon professional training, shaping the potential for either democratic engagement or institutional domination within public services. Grounded in debates on the evolution of professionalism and its shift from traditional occupational models toward organizational and hybrid forms (Cataldi, Tomatis, 2024), the research addresses two questions: 1) What trends characterize advanced social work education across European welfare regimes? 2) What are the professional-training needs of Italian Master's programs in Social Work? Through a dual-level methodology, a macro-level documentary analysis of 18 European Master's programs in Politics and Social Work, complemented by a comprehensive overview of the Italian LM-87 class, and a meso-level analysis of 12 semi-structured interviews with Piedmontese public and third-sector stakeholders, the study provides situated understanding of how professional education responds to neoliberal pressures. The European mapping confirms the impossibility of a uniform training model, revealing how Masters' curricula are shaped by the architecture of different welfare regimes (Laging, Žganec, 2021). The Italian landscape presents a fragmented picture, characterized by four main specialization axes: service governance, social policy design, innovation, and research. This richness conceals risks of potential fragmentation of professional identity, an economistic drift that subordinates social rights to managerial logics, and a structural territorial divide that reproduces the country's socio-economic inequalities (Cellini, Dellavalle, 2022). The findings resonate with the interrogation of professionalism under neoliberal governance. The economistic drift identified in curricula reflects the penetration of managerialist logics into professional education, a key feature of post-democratic transformations where technical-administrative rationality displaces political contestation over social rights. The fragmentation of professional identity threatens the collective capacity of social workers to act as a countervailing force against institutional violence and discriminatory welfare practices. Stakeholder interviews reveal a perception of identity crisis within Master's-level education, suspended between specialist intervention training and process manager formation (Cellini, Scavarda, 2020). This tension mirrors broader debates on whether professionalism can function as a vehicle for democratic renewal (Touijn, Dellavalle, 2017) or instead becomes complicit in authoritarian forms of governance through depoliticized technical expertise. The educational dimension inherent in professional practice acquires particular significance: curricula shape not only technical competencies but also cognitive orientations toward citizenship, rights, and the public good. The research contributes to understanding how professional education might foster resistance against neoliberal authoritarianism. Findings indicate the necessity of training that integrates critical policy analysis and contextual advocacy tools that enable professionals to navigate the tensions between managerial "efficiency" and democratic responsiveness. By illuminating the polarities characterizing Master's-level education and its relationship with the professional field, the study provides a foundation for rethinking how social work professionalism might be reclaimed as a democratic practice, capable of countering the multiple forms of counterintuitive and discriminatory welfare that characterize contemporary post-democratic conditions.

CRISES, UNCERTAINTY AND RISK – THE ROLE OF DEMOCRATIC PROFESSIONALISM

Jane Lethbridge (University of Greenwich, United Kingdom)

Democratic professionalism | risk | uncertainty

I wrote a book in 2019 'Democratic professionalism in public services' which explored what it meant for public service professionals to act in a democratic way. I would like to take this opportunity to explore how three crises that have affected Britain since 2019 have impacted on the practice of democratic professionalism, using a framework of risk and uncertainty. Although writing in the late 20th century, Ulrich Beck was concerned with the "hidden emancipatory aspects of global risks" and "emancipatory catastrophism". Zhang, Kong (2025) argue that resilience in a disaster can be improved by involving many stakeholders in the process of learning through crisis. This raises further questions about who defines the learning from a crisis, particularly which groups and how these groups resolve their differences. Muspratt-Palmer et al (2024) concluded that the process of learning is as important as the learning itself. This has implications for welfare professionals reacting to crises. As crises are characterised by uncertainty and risk, public professionals and services users must be able to come together in a shared learning process to facilitate a sense of emancipation. This will be essential for the formation of democratic professionalism. Professional expertise will have to undergo a transformation if democratic professionalism is to be embedded in public services during periods of crises. The COVID-19 pandemic features both as a major crisis and as a shadow where the learning has not yet been completed, as seen in the on-going COVID public inquiry. The second crisis, the cost-of-living crisis, resulted in extensive public service strikes, which were initially received sympathetically by service users because they were also experiencing the effects of rising prices. Trade union activity tried to focus on how an adequately paid workforce was essential for high quality public services. A third crisis, which had already begun by 2020, was how immigration has become a politically polarising issue, even with the creation of the Sanctuary movement in cities and schools, which generated forms of democratic professionalism. The impact of these three crises is still being assessed. The COVID Inquiry is now in its final weeks of hearing evidence. The cost of living remains a live political issue and trade union action is continuing. Immigration is considered a major political problem with greater polarisation across society. The paper will conclude with an assessment of future opportunities for democratic professionalism. 390 words

A DECENTRALISED TUTORING MODEL IN INITIAL TEACHER EDUCATION: A CASE STUDY ON THE DEMOCRATIC GOVERNANCE OF THE SCHOOL-BASED TUTOR ROLE

Giovanna Malusà (Free University of Bozen, Italy)

Democratic Professionalism | Decentralised Governance | Initial Teacher Education

This paper presents a mixed-method case study (Creswell, 2014) examining a decentralised model for organising the school-based tutor role in the fifth year of the Master's Degree in Primary Education at the Free University of Bozen-Bolzano. The study analyses the relational and organisational dimensions of the practicum implemented in the Autonomous Province of Trento. It is situated within an ongoing phase of organisational and value-oriented transformation of the

programme and seeks to contribute to the debate on possible directions for reorganising the curricular practicum and redefining university–school relations, particularly in light of proposals oriented towards centralisation and procedural streamlining justified in terms of efficiency and rationalisation. The analysis focuses on the school-based tutor as a pedagogical mentor accompanying student teachers during the practicum, in structured dialogue with university coordinators. The tutor is interpreted as a co-responsible actor in processes of observation, planning, assessment, and professional reflection, performing a mediating function between academic knowledge and situated school practice. The research design integrates longitudinal quantitative data covering four academic years (2022/23–2025/26) with qualitative data derived from participant observation during initial and debriefing meetings between school-based tutors and university coordinators, experimentally introduced from the 2024/25 academic year onwards. Across the four-year period, 124 school-based tutors and 122 student teachers were involved, distributed across 45 Comprehensive Institutes, corresponding to approximately 85% of the provincial network. The findings highlight marked turnover in the role. The system is characterised by broad participation and limited reiteration of the same teachers over time, generating a widespread territorial distribution of practicum activities. This configuration reflects structural organisational and territorial heterogeneity, within which the decentralised model supports context-sensitive arrangements and differentiated learning pathways, aligned both with local educational needs and with students' expressed requests. In a context characterised by high tutor rotation and voluntary engagement without structured financial recognition, sustainability appears to depend on a model grounded in distributed participation and context-sensitive coordination between university coordinators and individual schools. Qualitative analysis highlights processes of professional dialogue and shared meaning-making around the tutor role, interpretable as the emergence of a community of practice (Wenger, 1998), grounded in mutual engagement and reflexivity. The meetings function not merely as coordination devices but as spaces of professional recognition and collective reflection. Their dialogical dimension fosters forms of situated responsibility and shared orientation that are difficult to generate through centralised assignment procedures. The school-based tutor role thus emerges as a form of educational professionalism shaped by situated autonomy, shared responsibility, and dialogical practice, operating in tension with centralising and managerial governance logics. If democracy is understood not only as a formal institutional principle but as an enacted practice of participation and shared responsibility (Biesta, 2011), the case suggests that future reorganisation of the practicum should strengthen these dialogical spaces rather than introduce additional formalised designation procedures, while preserving attention to local contexts. The study concludes by discussing possible ways of sustaining educational professionalism as a democratic practice within a context marked by increasing managerialisation and hybrid governance arrangements.

PROFESSIONALISM, RESILIENCE AND SHARING: THE CASE OF A COMMUNITY OF PRACTICE AT THE TIME OF COVID-19

Fabio Lucchini (eCampus University, Department of Human and Social Sciences (DiSUS), Novedrate - Como, Italy)

Medical knowledge | Community of Practice | professionalism

This work is focused on the production and circulation of medical knowledge in the early stages of the COVID-19 pandemic. Specifically, the aim is to investigate the link between personal and professional resilience and the sharing of knowledge and practices at a time of epistemic rupture. The COVID-19 pandemic required the healthcare system to rapidly adapt to an unknown virus. This challenge led the medical and scientific communities to develop new knowledge and provide solutions, even without a solid evidence base to support them. In the early stages of the pandemic - at a time of epistemic rupture and in the absence of validated knowledge - the response of the scientific community and institutions was complemented by knowledge production 'from below' by professionals who were assisting patients at home (Lusardi et al., 2023; Lucchini, 2025). The empirical case refers to a Community of Practice (CoP) formed by a network of health professionals spontaneously activated in Northern Italy during the first pandemic waves - CoP conceptualized as a group

of people bound together in a common enterprise by relations of mutual involvement around a problem or domain of knowledge, producing a shared repertoire of resources (Lave & Wenger, 1991; Wagner et al. 2019). Dynamics within the network were examined through a grounded theory approach (Glaser & Strauss, 1967), bringing out some analytical categories from the empirical field, and constructing a classification system articulated at different levels of generality. The collected audiovisual material (18 video interviews) was subjected to thematic analysis starting with an encoding of extracted text segments. The analysis was assisted by MAXQDA 2022 software. The emerging narratives highlight the value of medical practice in a situation of structural crisis, giving meaning to individual action through shared processes of signification, filling the temporary absence of recognized and established knowledge. Moreover, the analysis of the professional network in question encourages reflection on the educational value of sharing experiences for the healthcare personnel involved and on the proactive contribution it can make to the National Health Service (NHS), specifically in situations of systemic uncertainty. It also reveals the potential, in terms of activism, of those healthcare professionals committed to building relationships, sharing relevant information, and promoting joint initiatives: a rich repertoire of experiences and tools that, under certain conditions, can be a valuable resource for the Italian NHS, which is struggling with financial sustainability issues that make it vulnerable in the face of the emergency.

Citizenship, social justice and quality in education since early childhood

PANEL CONVENORS: Cristina Stringher (Invalsi, Italy), Berenice Scandone (Polytechnic University of Milan, Italy)

PANEL KEYWORDS: citizenship, social justice, school

The panel explores the intersections between education, citizenship, and social justice, examining how schools can foster democratic participation, inclusion, and student well-being. The contributions address multiple dimensions: from peace and citizenship education, including initiatives linking schools and communities, to the shaping of the imaginary through narratives and symbolic disarmament practices in peacebuilding processes; from the use of education as a tool for peace in contexts of genocide, to the challenges of democracy in education, as illustrated by democratic regression in post-reform Indonesia. Particular attention is given to assessment justice, focusing on equity, inclusion, transparency, and pedagogical coherence in evaluation practices. Finally, the panel highlights the role of schools in supporting student well-being, drawing on insights from the Italian National Evaluation System, and reflecting on the implications of educational policies and practices for fostering active citizenship and inclusive communities.

QUALITY IN FAMILY CHILDCARE SERVICES. AN EMPIRICAL STUDY

Alessio Schiavone (Università degli Studi Roma Tre, Italy) · **Concetta La Rocca** (Università degli Studi Roma Tre, Italy) · **Arianna Lodovica Morini** (Università degli Studi Roma Tre, Italy) · **Amalia Lavinia Rizzo** (Università degli Studi Roma Tre, Italy)

Family childcare services | quality | evaluation

Within the framework of implementating the integrated 0–6 system (Legislative Decree 65/2017), this research addresses the problem of constructing and experimenting with an operational model for assessing quality in family childcare services and innovative early childhood education services. The study is situated within a pedagogical domain that remains poorly systematized from theoretical and evaluative standpoints, due to the absence of unified national regulations and the heterogeneity of regional normative frameworks (Oldini, 2004; Fortunati, 2006). Considering this context, the study adopts the paradigm of evaluation as a formative, participatory, and contextualized practice. Quality is conceptualized as a processual configuration empirically observable in the ways spaces, temporal organization, educational practices, and

interactions are constructed by stakeholders within educational contexts (Restiglian, 2020). This approach integrates perspectives from educational evaluation and customer satisfaction (Capparucci, 2011), conceiving quality as a continuous monitoring process aimed at improvement. Moreover, it is oriented according to the structuring principles of Early Childhood Education and Care (EC, 2018; 2021), such as: educational continuity 0–6, centrality of the educational relationship, children's agency, and co-responsibility with families. This study aims to develop and validate an operational model for quality assessment in family childcare services, and identify scientifically grounded indicators and procedures for analyzing their educational, organizational, and inclusive dimensions. The methodological framework is based on a mixed-methods design, articulated in a preliminary exploratory phase followed by an idiographic phase based on integrated single-case studies (Yin, 2005). The reference population includes home-based educational services affiliated with the APS Network "Scarabocchiando a casa di...," which is the research funder, encompassing over 200 non-profit services distributed across 14 Italian regions. The exploratory phase – already completed – involved the administration of questionnaires to 195 operators and 1,810 families. The questionnaire results highlight quality dimensions specific to family childcare services, including educational personalization, relational continuity, trust-building, and management of special educational needs. In agreement with the Network coordinators, the idiographic phase focuses on 6 services distributed across 3 regions (Lombardy, Emilia-Romagna, Lazio), selected for their theoretical relevance and capacity to support, extend, or refute a reference theory (Yin, 2005). During the ongoing phase, data collection involves systematic observations through specifically designed structured instruments: focused interviews and documentary analysis. Expected outcomes include: the theoretical-methodological systematization developed regarding the specificity of family childcare services; the theorization of quality assessment in home-based educational services through the integration of perceived quality data from operators and families, systematic observation of empirical evidence; and the reconstruction of processual complexity.

QUALITY OF ECEC SETTINGS, SERVICES AND SYSTEMS: THEORY AND MEASUREMENT CHALLENGES IN ITALY.

Cristina Stringher (INVALSI, Italy)

Preschool quality evaluation

Quality in Early Childhood Education and Care (ECEC) settings, services and systems is key for preparing adequate learning environments where children may be involved in meaningful activities supporting their holistic growth (EU Commission, 2014; 2022; 2023; Heckman, 2008; OECD, 2015). However, the identification and definition of quality features vary remarkably among scholars from different epistemological stances (Anders, 2015; Eadie et al, 2024; McLean et al, 2022; Melhuish et al, 2015; Pascal & Bertram, 1999; Pianta et al, 2009). In addition, society at large may coalesce distinctive aspects of the quality concept, according to the unique point of observation of its stakeholders: policy makers, child advocates, school leaders, parents or inspectors. Being quality a concept indebted to new public management's theories (Gunter, Grimaldi, Hall & Serpieri, 2016), some even reject it altogether, in favour of a more concrete "good work" (Dahlberg, Moss & Pence,1999). Notwithstanding, quality matters in ECEC (Melhuish, 2011) for children's lives, therefore it merits careful consideration. The scientific literature identified quality factors, yet very few ECEC systems evaluate their settings' quality on a national basis, through internal or external evaluations or a mix of both (Eurydice, 2025; Stringher et al, submitted). Policy decisions and curricular choices impact the organisation of quality evaluation systems: within

accountability systems, incentives and sanctions are deployed to sustain service quality, while service/setting quality appraisal might yield continuous improvement, and system quality evaluation serves a more general governing purpose (EU Commission, 2018; OECD, 2013). With this theoretical contribution, I provide a conceptual map on ECEC quality definitions and concentrate on the operationalization of preschool quality within the Italian national system for educational evaluation. The methodological choices behind preschool evaluation and the pathway to its scaling up to national level are described, based upon a complex research design involving: the draft of a preschool self-evaluation format (P-SEF); a public consultation on this draft (INVALSI, 2016); an experimentation (Freddano & Stringher, 2021); an ex-ante evaluation of its strengths and weaknesses prior to its national diffusion (Freddano & Stringher, 2026). In synthesis, this major research-administrative endeavour enables the operationalization of preschool quality in Italy, serving a dual purpose: improvement of individual preschools and of the preschool sector overall. The application of the preschool evaluation format opens new avenues, and three aspects need to be further explored in the future: tools for the observation of child learning, development and wellbeing; preschool external evaluation, complementing the internal exercise; a model for childcare settings self-evaluation. These three lines of research are guided by an overarching principle, that is the best interest of the child. In sum, national preschool quality evaluation is a first-of-its-kind in the international panorama and a powerful tool to improve the quality of the entire ECEC system, an infrastructure that positions Italy at the forefront of quality for children. Our hope is that improvement stays current for all adults working for children's development, learning and wellbeing.

PROMOTING PEACE AND CITIZENSHIP EDUCATION. FROM SCHOOL TO COMMUNITY.

Carla Podda (University of Cagliari, Italy)

Peace | Citizenshio | Education

Drawing on the theoretical framework of critical pedagogy (Granese, 1993; Fadda, 2009; Cambi, Cives, Fornaca, 1999), the aim of this paper is to develop a deep understanding of citizenship education, starting from its radical meaning and articulating the interconnections between the individual dimensions and the broader social and systemic dynamics, in search of collaborative and participatory solutions. Critical pedagogy is essential to analyse education as a pathway capable of orienting itself towards emancipatory and radical forms of access to knowledge, thus foregrounding values (Colicchi, 2021) and developing the transformative potential role of both knowledge and learning (Fadda, 2002; Mortari, 2007). The reflection also considers relevant theoretical contributions, current pedagogical and didactic proposals in peace and citizenship education (Baldacci, 2020; Mortari, 2008; Santerini, 2010; Nanni, Gross, 2024). Reflecting on the remarkable changes, asymmetries and outbreaks of war that are leaving profound marks on society, it is necessary to reflect on peace, on citizen's rights and on the coexisting responsibilities for the individual and for the democratic institutions. Peace and citizenship education lead to learn that each one is part of society and is interconnected with others as human being, thus each one has a role in shaping the community (Nuzzaci, Rizzi, 2020; Mulè, 2010). Both, peace and citizenship education make people aware of their right to participate in political and social decisions and guide them to be leaders in decisions making (Santerini, 2017; Secci, 2012). The paper finally analyses an innovative project concerning citizenship education. The project took place at a Higher Education Institute in the area of Cagliari and it aimed to encourage the training of informed citizens and promote the development of transversal skills between young students. Starting from the analysis of risk factors that cause anti-democratic involutions and from a critical reflection on social phenomena, action in schools' democratic life and participation in community were enhanced. The cooperative learning methodology of learning together (Johnson and Johnson, 1988, 1999, 2018) was considered as the best approach to improve peace and citizenship education between students.

MEASURING PARENTAL PLAY ATTITUDES IN EARLY CHILDHOOD: WHAT AN IMPERFECT QUASI-EXPERIMENTAL DESIGN CAN STILL TELL US

Marco Spampinato (VoisLab - Istituto degli Innocenti, Italy)

play facilitation | parental attitudes | early childhood education

Defining quality in Early Childhood Education and Care (ECEC) is an inherently complex task, since educational practices are deeply embedded in cultural contexts and everyday family interactions. Anthropological and sociocultural research has shown that practices considered good for children in one context often reflect specific cultural values rather than

universal developmental standards (Tobin, 2007; Adair & Doucet, 2014). Comparative European research on early childhood settings similarly indicates that educational practices remain strongly influenced by cultural contexts (Slot et al., 2016). One way to address this tension is to focus less on prescribing ideal practices and more on understanding relational processes that support children's experiences within their everyday life environments, thereby encouraging a more harmonious interplay between formal educational settings and children's everyday family interactions. This study presents the results of a quasi-experimental analysis conducted within the broader evaluation of a local project in Tuscany (Italy) aimed at preventing educational poverty. The project included several services for families with children aged 0–6, among which experimental play sessions for parents and children organized in a nursery school and in local ludoteche (toy libraries / lekotek: Björck-Åkesson & Brodin, 1992). These sessions encouraged parents to engage in playful interaction with their children using simple natural materials and everyday environments. The evaluation adopted a post-test only design with nonequivalent groups (Shadish, Cook & Campbell, 2002). A key methodological challenge was constructing an outcome measure aligned with the intervention's goal: strengthening parents' competence in facilitating play. A survey instrument was therefore developed combining attitudinal and behavioral measures. Parents were presented with pictures depicting children engaged in ambiguous play situations involving natural environments and ordinary materials. For each image, respondents evaluated the appropriateness of alternative parental reactions ranging from restrictive behaviors to facilitating and cooperative interactions. The resulting scale captured two attitudinal orientations: play-inhibiting control and play-facilitating cooperation. The survey also collected information on children's everyday activities alone and with their parents. Despite limitations in internal validity—notably the absence of baseline data and voluntary participation—relevant patterns emerge. Parents who attended the play sessions showed higher levels of play-facilitating attitudes than parents who used other project services but did not attend the sessions. No differences emerged in play-inhibiting attitudes. Moreover, treated parents did not display higher levels of tolerance for ambiguity (Arquero & McLain, 2010; McLain, 2009), suggesting that the intervention may strengthen dispositions to engage in play without necessarily modifying deeper personality traits. Beyond the causal interpretation of the treatment effect, the analysis clarifies the broader meaning of parental attitudes toward play. Higher levels of play facilitation are associated with children's engagement in everyday activities such as outdoor, creative and pretend play (Bruner, Jolly & Sylva, 1976; Lillard, 2015). Even with an imperfect design, the study shows that investigating parents' mental representations that inform perceptions and behaviors (Pylyshin, 1972) can generate evidence on how everyday family interactions facilitate or constrain children's playful experiences.

WELLBEING IN SCHOOLS: LESSONS FROM THE ITALIAN NATIONAL EVALUATION SYSTEM.

Cristina Stringher (INVALSI, Italy) · **Michela Freddano** (INVALSI, Italy)

Student wellbeing | (Pre)Schools | Italian evaluation system

Wellbeing is central to international policies since the Stiglitz, Sen, Fitoussi commission (2009), whose work stays current. Belotti and Moretti (2011) identified 12 domains of children's wellbeing in 6 international studies, with educational wellbeing cutting-across them. Internationally, wellbeing is thematized in OECD's IELS Study, "Measuring what counts" and "How's life" series, it is part of the UN SDGs and is included in the European Commission's 2030 strategy. Simply put, wellbeing is a precondition to learning and (pre)schools (as secondary socialization agents) are a major context for student wellbeing and agency (Corsaro, Fingerson, 2006). A pioneer in this field is Montessori (1999; 2000) that considered children as active agents of their growth and wellbeing in the prepared environment. After COVID-19, wellbeing is crucial considering increased episodes of disruptive student behaviour, technological overload, absenteeism and dropout (OECD, 2024; Lee, Zarnic, 2024). However, student wellbeing at school is a highly situated concept and defining it for its operationalization is challenging. The ISCW study focuses on subjective wellbeing including affective (positive/negative) and cognitive life satisfaction (Ben Arieh, 2025), yet its scales are too detailed for national evaluation of school settings. Linking evaluation to wellbeing might sound bizarre, but it is not. This paper addresses student wellbeing through an innovative study, part of a broader programme on school effectiveness and improvement (Freddano, Stringher, 2021). In Italy, curricular guidelines for the first cycle of education emphasise child wellbeing, especially in preschool (MIUR, 2012). The Italian national system for educational evaluation (Presidential Decree 80/2013) is promoting school quality since 2015 with a specific national self-evaluation format for all schools to use (INVALSI, 2014). Preschools have experimented a specific version of this format in 2018-2020 (Freddano, Stringher, 2021; Previtali, Stringher, 2017) and its revision has been extended to national level in 2025 (Freddano, 2025). This theoretical contribution aims to describe the participatory quali-quantitative methodology behind the creation, with national stakeholders, of the updated (Pre)school Self-Evaluation Format. P-SEF includes a specific focus on wellbeing at school, through a set of indicators related to children's and teachers' wellbeing. This project is the result of a 10-year process (Stringher, 2025) for the identification of the indicators ultimately included in the format and concerning: child and youth wellbeing in (pre)schools as indexed by teachers' perceptions; data collection methods in (pre)schools concerning student wellbeing; (pre)schools' climate and its orientation to students' and teachers' wellbeing. Data collection has been carried out in 2025 in almost 20,000 (pre)schools nationwide. The outputs of the study are quantitative measures of wellbeing; an additional output concerns the data collection platform for large-scale application at national level. Outcomes, according to initial analyses, seem to merit further scrutiny, as student wellbeing seems to decrease sharply from preschool to secondary education. Practice, research and policy implications are manyfold and include ways to engage all (pre)schools in data literacy for wellbeing, yielding better student outcomes, and additional analyses on school processes' determinants of students' and teachers' wellbeing in different school contexts. Policy initiatives supporting student wellbeing in schools are urgently needed.

EDUCATING THE IMAGINARY: NARRATIVE, CHILDHOOD, AND SYMBOLIC DISARMAMENT IN PEACE-BUILDING PROCESSES

Silvestro Malara (Università Mediterranea degli Studi di Reggio Calabria, Italy) · **Fabiana Milardi** (Università Mediterranea degli Studi di Reggio Calabria, Italy)

imaginary childhood peace education

In the contemporary context marked by the proliferation of armed conflicts, humanitarian crises, and the increasing fragility of democratic systems, education is called upon to confront the question of how social imaginaries are formed - those frameworks through which societies interpret violence, conflict, and alterity. From this perspective, peacebuilding does not concern only political and institutional processes, but also the symbolic and cultural dimensions through which individuals learn to interpret and make sense of social reality (Galtung, 1969; Reardon, 1988). Within this theoretical framework, the present contribution reflects on the role of narrative in early childhood as a pedagogical device capable of shaping the social imaginary and the symbolic horizons through which individuals interpret the world. Narratives addressed to children - such as fairy tales, stories, images, and symbolic practices - should not be understood merely as forms of entertainment. Rather, they participate in the construction of systems of meaning and interpretive models that contribute to the development of the cognitive and symbolic dispositions through which individuals learn to read and understand social reality (Bourdieu, 2023; Bourdieu & Passeron, 1970). The analysis draws on sociological reflections on the imaginary, understood as a constellation of symbolic representations, myths, and narratives through which human communities construct and transmit shared worldviews (Durand, 1972). From this perspective, children's narratives may be interpreted as privileged sites for the production and transmission of the social imaginary, shaping the ways in which individuals perceive themselves, others, and the social contexts in which they are embedded. The contribution is further grounded in the Lacanian triad of the Real, the Symbolic, and the Imaginary, which offers a conceptual framework for interpreting processes of subject formation as the result of a dynamic interplay between images, language, and those dimensions of experience that resist full symbolization (Lacan, 1974). Within this framework, the imaginary emerges as a space of symbolic elaboration in which children construct representations of reality through images and stories. These processes are intertwined with the cognitive and affective dynamics described by developmental psychology, where symbolic play and narrative practices play a central role in organizing experience and in the construction of meaning (Piaget, 1978; Vygotsky, 2014; Winnicott, 1971). Engaging with the international literature on peace education (Galtung, 1969; Reardon, 1988; Harris & Morrison, 2013; Bajaj, 2008; Salomon & Cairns, 2009), the paper argues that childhood narratives can be interpreted as pedagogical devices capable of influencing the formation of collective imaginaries, fostering ethical awareness and reflective competences oriented toward democratic coexistence. In this sense, narrative education can be understood as a form of "symbolic disarmament", capable of counteracting forms of symbolic violence and supporting peacebuilding processes from the earliest stages of human development. In light of these considerations, the paper proposes to reconsider children's narrative practices not merely as educational or cultural activities, but as pedagogical dispositifs that act upon the deeper structures of the social imaginary, contributing to the formation of subjects capable of dialogue, mutual recognition, and global responsibility.

EDUCATION: A TOOL FOR PEACE IN TIMES OF GENOCIDE

Emanuela Pettinari (University of Bologna, Italy)

Scholasticide | Sumud | Education

In conflict zones, children are the most vulnerable group, a situation drastically exacerbated by the proliferation of global conflicts. Data from PRIO (2024) show that the number of children living in war zones has doubled, rising from 10% in 1990 to the current 19%. The observations made by Ladd and Cairns (1996) regarding the lethality of modern wars for civilians are tragically confirmed today: the United Nations Secretary-General (2024) reports a further 25% increase in violence against chidren compared to the previous year. These figures, which we must not forget refer to people, highlight serious short- and long-term consequences on a human, psychological and social level (Bessell, O'Sullivan, 2026). It is therefore imperative to prioritise the well-being of children in war zones and areas of genocide, ensuring the rights enshrined in the 1989 UN Convention. Having ratified the Convention in 1991, Italy is obliged to implement universal protection measures, without borders. This presentation analyses the dramatic loss of educational opportunities in the Gaza Strip following 7 October, highlighting the resulting stalling of children's cognitive, emotional and relational development. Despite this context, there are concrete examples of sumud, the typical Palestinian resilience that transforms attachment to life and the land into creative solutions as an informal school and artistic activities for children. In line with UNESCO (2023), we believe that peace is not merely the absence of conflict, but a participatory process founded on universal access to education, a cornerstone right for the realisation of all other human rights. We firmly believe that the strengthening of justice and the rule of law depends precisely on the protection of educational experiences.

Building Inclusive and Democratic Schools Through Students' Psychological Resources

PANEL CONVENORS: Simone Zasso (Sapienza University of Rome, Italy); Clementina Comitale (Sapienza University of Rome, Italy); Camila Contreras (Sapienza University of Rome, Italy); Yuanhang Fu (Sapienza University of Rome, Italy); Alessia Teresa Virzi (Sapienza University of Rome, Italy)

PANEL KEYWORDS: Individual Differences, Social-Emotional Skills, Civic Engagement

Schools are increasingly expected to promote academic learning but also students' psychological well-being, social inclusion, and active participation in democratic life. Research in psychology highlights the relevance of individual differences in developing psychological competences (e.g., empathy, self-efficacy, prosocial behaviour, and emotional regulation) as resources shaping students' capacity to build positive relationships, engage with diversity, and participate meaningfully in school communities (Caprara et al., 2014). Within Bandura's Social Cognitive Theory (Bandura, 2001), these resources operate through reciprocal interactions between individual factors, social environments, and cultural contexts. The 2030 Agenda for Sustainable Development identifies the realization of all children's rights and the inclusion of those furthest behind as essential conditions for sustainable progress worldwide. In line with this vision, international frameworks such as the OECD's work on student well-being and socio-emotional skills emphasize how psychological resources empower young people to participate actively in their communities and democratic life, reinforcing civic engagement as a key driver of the Sustainable Development Goals (OECD, 2021). This panel aims to advance interdisciplinary understanding and foster open debate on how psychosocial factors can shape students' well-being, citizenship, and social integration within and beyond the school context. We invite evidence-based studies examining these processes from psychological, educational, and multidisciplinary perspectives. Contributions may include empirical studies, comparative analyses, intervention evaluations, or conceptual reflections that explore how psychological resources support inclusive learning environments, mitigate inequalities, or strengthen democratic participation.

BEYOND NATIONAL CANONS: JAPANESE LITERARY NARRATIVES AS A RESOURCE FOR EMOTIONAL REGULATION AND DEMOCRATIC CITIZENSHIP IN ITALIAN SCHOOLS

Rosa Tiziana Bruno (Universidad "Complutense" Madrid, Spain, Italy)

Emotional Regulation | Children's Literature | Democratic Citizenship

Schools bear responsibility for fostering psychological competences—such as emotional regulation, empathy, and prosocial behaviour—essential for students' active participation in democratic life (Caprara et al., 2014). Bandura's Social Cognitive Theory (2001) posits reciprocal interactions between cultural narratives and individual representations. This psychosocial study examines how dominant literary narratives correspond with anger representations among children and adolescents, across cultures.

Using a mixed-method design, an analysis of 50 young books featuring anger themes (predominantly Italian/Western vs. Japanese) revealed distinct national "narrative templates". Italian literature often reinforces individualistic conflict resolution (explosive or repressive), while Japanese texts emphasize relational containment to preserve community harmony.
These patterns were validated against empirical data from 500 Italian students (ages 5-18) and a Japanese comparative sample.

Findings reveal a strong alignment between literary canons and youth representations: Italian youth predominantly exhibit confrontational anger, mirroring Western narrative dominance and correlating with higher resentment accumulation and reduced prosocial orientation. Conversely, the Japanese model focuses on "relational anger," where emotional regulation is not merely an individual effort but a social responsibility. By prioritizing group cohesion over individual emotional discharge, this approach fosters a culture of mutual care. The relational framework becomes therefore a cornerstone of democratic schooling, as it transforms conflict into an opportunity for collective negotiation rather than social fragmentation. Japanese youth's management of internalized and relational anger is consistent with their literary tradition, and this correspondence confirms the role of literature as an implicit emotional curriculum: contemporary literature functions primarily as a cultural crystallization, reproducing prevailing emotional norms and predetermining social imaginaries prior to formal education. Experimental Evidence: An intervention exposing Italian children to Japanese narratives demon-

strated a significant shift toward relational, prosocial imaginaries. This confirms literature's dual function: crystallization of existing norms vs. transformation through divergent models. This dual function positions children's literature as a strategic psychosocial resource for democratic education. By tracing the pathway from cultural narratives through youth representations to behavioural competences, these findings show how schools can leverage "outsider" literary traditions to counter domestically crystallized emotional fragilities. Japanese anger narratives offer Italian students cultural scaffolding for empathy and cooperation, strengthening psychological competences for inclusive school communities and active citizenship (OECD, 2021). The study calls for curriculum diversification beyond national canons to activate literature's transformative potential, preventing resentment sedimentation while cultivating a democratic emotional culture. Conclusions: Western individualistic narratives risk cultivating fragile democratic skills, while Japanese relational models offer the cultural framework for inclusive citizenship. Cross-fertilization through literary exchange would be desirable. In line with the OECD Frameworks (2021), this study promotes the curricular integration of diverse literary traditions to strengthen emotional regulation as a foundation for active democratic participation, particularly within heterogeneous school communities.

THE DAILY EMOTIONAL IMPACT OF ONLINE HATE SPEECH IN ADOLESCENCE: THE ROLE OF MIGRANT BACKGROUND

Serena Verbena (University of Florence, Italy) · **Giuseppe Corbelli** (UniNettuno University) · **Di Brango Noemi** (University of Roma La Sapienza) · **Virzì Alessia** (University of Roma La Sapienza) · **Mariotto Michela** (University of Roma Tre) · **Igor Marchetti** (University of Florence, Italy) · **Di Bari Cosimo** (University of Florence, Italy) · **Ioverno Salvatore** (University of Roma Tre) · **Antonio Zuffianò** (University of Roma La Sapienza) · **Benedetta Emanuela Palladino** (University of Florence, Italy)

Online Hate Speech | Adolescence | migrant background

Online Hate Speech (OHS) is associated with reduced psychological well-being and other adverse outcomes, yet longitudinal evidence in adolescence remains limited (Wachs et al., 2025). Even less is known about the daily mechanisms linking OHS exposure to adolescents' emotional experiences, particularly among youth with a migrant background, who often face additional discrimination-related stressors (Tynes et al., 2025). The present study examines the daily impact of OHS on negative emotions, namely sadness and anger, comparing adolescents with and without a migrant background. By leveraging intensive longitudinal data, this study provides ecologically valid insights into how OHS exposure shapes adolescents' emotions in everyday life. As part of a multicentric project, the study involves 84 high school classes in 9th and 10th grade across Italy, with data collection conducted between January and March 2025. Students completed two survey waves and a 27-day daily diary in between to assess OHS exposure and daily anger and sadness. Linear mixed-effects models were used to examine intra-individual fluctuations, focusing on adolescents with a migrant background, approximately 10 percent of the sample, and their majority-group peers. Extended OHS exposure measured at baseline, assessing exposure in the previous month, was positively associated with higher average daily sadness and anger. Additionally, for sadness, a significant three-way interaction emerged (b = -0.18, 95 percent CI [-0.34, -0.02], p = .03), indicating that the interaction between daily and extended exposure differed by migrant background. Specifically, a positive same-day association between daily OHS exposure and sadness was observed only among adolescents with a migrant background reporting low levels of extended exposure. For anger, a significant two-way interaction between daily and extended exposure was found (b = -0.11, 95 percent CI [-0.19, -0.04], p = .004), suggesting that daily OHS exposure was associated with higher anger only at lower levels of extended exposure. Overall, extended OHS exposure was associated with higher average daily sadness and anger across the sample, indicating that cumulative exposure to online hostility is emotionally burdensome for adolescents regardless of migrant background. At the same time, daily emotional effects were differentially shaped by cumulative exposure and migrant background, particularly for sadness. Among

adolescents with a migrant background, the pattern may be consistent with a desensitization process, whereby repeated exposure attenuates same-day emotional reactivity. In contrast, anger was more reactive at lower levels of cumulative exposure, with diminished daily effects as exposure became more persistent. Although anger is often viewed negatively, it may also function as a mobilizing emotion in discriminatory contexts across the sample. Over time, sustained exposure and elevated negative affect may contribute to broader impacts on psychological well-being, especially when discriminatory content targets identity-relevant dimensions among adolescents with a migrant background. Future research should further examine these mechanisms and their longer-term implications. Overall, the results underscore the importance of educational practices that actively cultivate safe, inclusive, and identity- affirming digital spaces, promote critical media literacy, and foster school environments in which diversity is explicitly valued and protected.

LOOKING TO THE FUTURE: A COMPARISON OF ADOLESCENTS' AND PARENTS' EXPERIENCES AND OPINIONS ON COMPREHENSIVE SEXUALITY EDUCATION

Valeria Bruno (Università degli Studi dell'Aquila, Italy) · **Roberto Baiocco** (Sapienza Univeristà di Roma) · **Jessica Pistella** (Sapienza Univeristà di Roma)

Comprehensive Sexualities Education | Adolescents | Desirable future

Comprehensive Sexuality Education (CSE) is recognized as a lifelong learning process since childhood, grounded in shared educational responsibility between schools and families. The school environment should provide CSE as a multidisciplinary and transversal subject, in line with international guidelines (IPPF, 2017; UNESCO, 2018; WHO & BZgA, 2010). On the other hand, families should openly introduce sexual and relational issues, supporting healthy development and behavior, increasing knowledge and awareness, and fostering positive and respectful attitudes toward one's own and others' sexuality (Ball et al., 2023; Benoit & Ronis, 2023; Castro et al., 2024; Nattabi et al., 2023). Italy still seems behind in the formal introduction of CSE in school contexts, as no law allows it, and the focus seems mostly on the duty and right of families to educate their children exclusively on sexual and relational topics (Bruno, 2024, 2025). However, studies on family discussion regarding sexual and relational issues highlight that difficulties and resistances are often encountered, which often lead to avoidance, discomfort, and embarrassment (Ballard & Gross, 2009; Grossman et al., 2017; Holman et al., 2023). While parents lack knowledge and competencies, adolescents who report an educational need use mostly informal sources (e.g., friends, partners, the web, pornography, social media, and peers) to self-educate (Alloni et al., 2017; Moreira et al., 2023; Unis & Sällström, 2020) and parents are considered incompetent (McCrimmon et al., 2024). Hence, family communication about CSE is perceived as inadequate or unsatisfactory (Bruno et al., 2026; Bleakley et al., 2018; Narushima et al., 2020). For these reasons, the present mixed-method study aims to explore CSE's experiences and opinions in a triadic perspective, involving Italian adolescents, their parents. The first phase of the study included semi-structured interviews with an adolescent, the mother, and the father in each family; the second phase, still ongoing, involves administering an online questionnaire to adolescents, mothers, and fathers. The first phase was an exploratory qualitative study involving 50 families, while the second one aims to reach a wider, more heterogeneous sample, enabling statistical analyses and comparisons of experiences and opinions across families, adolescents, parents and Italian contexts. The present study aims to provide a deeper understanding of how families and single members (adolescents and parents) experienced CSE and, looking forward to it, how they would like to receive it. Making them part of the rethinking process of educational change, the future aim is to design training and educational programs for both adolescents and parents.

CAN SOCIAL SUPPORT BUFFER INEQUALITY? EVIDENCE FROM PISA 2022 ON OBJECTIVE-SUBJECTIVE STATUS GAPS AND PERCEIVED SOCIAL MOBILITY

Althea Bianca Dal Ben (University of Milano-Bicocca, Department of Sociology, Italy) · **Marta Branda** (University of Milano-Bicocca, Department of Psychology, Health and Sustainability Lab, Italy)

Social support | Subjective and Objective Social Status | Inequalities

Family socio-economic status is a major structural determinant of adolescents' educational trajectories shaping academic performance and access to future opportunities, and expectations of success across their life course (OECD, 2023). Socio-economic advantage provides students with material, cultural, and relational resources that increase the likelihood of favourable school outcomes and access to educational and occupational pathways. Yet adolescents do not experience inequality only through objective family background. Their social position is also interpreted through everyday relational contexts, including support from teachers and family, experiences of belonging, and social comparison at school. Thus, relationships may shape how young people make sense of both current status and future prospects (OECD, 2024). Research increasingly shows that subjective social status (i.e., how young people perceive their position in the social hierarchy) captures a distinct psychosocial dimension of inequality that extends beyond objective socio-economic background alone. Subjective socioeconomic status is consistently associated with adolescent health and well-being even after accounting for objective socio-economic conditions, supporting its relevance as an independent dimension of stratification (Quon & McGrath, 2014). However, objective and subjective status are positively associated but only partially

aligned (Sweeting & Hunt, 2014). This partial overlap implies that some adolescents perceive themselves as socially lower or higher than expected given family background, allowing examination of the discrepancy between structural position and perceived social standing. Examining this discrepancy, and the potential protective role of relational support, may offer a more nuanced understanding of how inequality is internalised and shapes adolescents' perceptions of present status, future opportunities, and upward social mobility. Using data from the Italian PISA 2022 sample (N=10,552) of 15-year-old students, this study examines whether a discrepancy exists between adolescents' objective socio-economic status and their perceived subjective social status, and whether perceived support from family and teachers is associated with this discrepancy and with adolescents' future expectations. Objective socio-economic status is measured through the OECD's ESCS Index. Students are asked to think about their country's society in terms of money, education and job positions. Given this input, subjective social status and perceived future opportunities are captured through students' self-placement on a 1–10 scale in response to the questions, "Where would you say your family stands at this time?" and "Where do you think you will stand when you are 30?", respectively. Indicators of perceived family's support, teacher's support, and sense of belonging are included in the analysis as key relational resources. Preliminary findings confirm a meaningful discrepancy between objective and subjective status, with 5.6% of students perceiving themselves lower than expected based on their ESCS, 53.2% showing alignment, and 41.2% perceiving themselves higher than expected. Initial analyses suggest that relational support plays a protective role: students reporting a stronger sense of belonging tend to show more positive future expectations and higher perceived opportunities for upward mobility, even when objective socio-economic status is considered. Overall, these findings suggest that inequalities' stratification is not only structurally distributed but also subjectively interpreted, and that supportive relationships may help buffer the internalisation of disadvantage by sustaining adolescents' future expectations.

YOUTH POLITICAL DISENGAGEMENT AND SOCIO-POLITICAL ATTITUDES: FINDINGS FROM A CROATIAN NATIONAL STUDY OF POLITICAL LITERACY

Jelena Matić Bojić (Institute for Social Research in Zagreb, Croatia) · **Nikola Baketa** (Institute for Social Research in Zagreb, Croatia) · **Lorelaj Lukačin** (Institute for Social Research in Zagreb, Croatia)

Youth Political Disengagement | Authoritarianism | Prejudice

This presentation focuses on youth political disengagement, examined within the broader framework of a long-term research initiative on political literacy among Croatian youth. The initiative brings together a large group of Croatian social scientists and has monitored the level of political literacy among final-year secondary school students every five years since 2010 (Bagić, 2011; Kovačić & Horvat, 2016; Baketa, Bovan & Matić Bojić, 2021). The political literacy surveys provide insight into the political knowledge, as well as democratically relevant attitudes and behaviors, of a nationally representative segment of the youth population. In doing so, they offer an important perspective on the outcomes of political socialization among the current generation of the youngest voters and those who will soon become voters. The nature of the project enables the insight into trends and changes over time. Several key concepts included in the current study were also examined in earlier survey waves conducted in the 2009/2010, 2014/2015, and 2020/2021 school years. This allows researchers to monitor developments in political orientations and engagement among final-year secondary students across more than a decade. Data collection for the most recent wave in the school year 2025/2026 is currently ongoing. Within this broader research framework, the present paper places particular emphasis on youth political disengagement. Low political interest and limited political engagement among young people represent a significant challenge

for democratic societies, both in Croatia and globally. Understanding the sources and correlates of political disengagement is therefore an important step toward better understanding of the political socialization of younger generations. In this presentation, we will focus specifically on the relationship between youth political disengagement and a range of socio-political attitudes, including levels of authoritarianism as well as gender-, sexual-, and ethnic-based prejudice. To examine this phenomenon, a Youth Political Disengagement Scale was recently developed (Lukačin, Matić Bojić & Baketa, 2026). Preliminary validation results indicated a strong negative correlation between political disengagement and political interest, as well as moderate to strong negative correlations with various formal and informal forms of political participation. These findings suggest that the scale captures an important dimension of young people's relationship with politics. However, a more detailed examination of the broader attitudinal and ideological correlates of political disengagement is still needed. Data from the ongoing survey of a large nationally representative sample of final-year secondary school students (N ≈ 1000) will make it possible to further test the construct validity of the scale and to explore how youth political disengagement relates to a broader set of socio-political orientations and attitudes among young people in Croatia.

LINKS BETWEEN POSITIVITY AND STUDENTS' PERCEPTIONS OF PEER CLIMATE AT SCHOOL: A DAILY DIARY STUDY IN EARLY ADOLESCENTS

Simone Zasso (Sapienza University of Rome, Rome, Italy) · **Giulia Sailis** (Sapienza University of Rome, Rome, Italy) · **Lucia Manfredi** (Sapienza University of Rome, Rome, Italy) · **Giulia Gaggero** (University of Trento, Rovereto, Italy) · **Lavinia De Marco** (Sapienza University of Rome, Rome, Italy) · **Stefania Sette** (Sapienza University of Rome, Rome, Italy) · **Enrico Perinelli** (University of Trento, Rovereto, Italy)

Positivity and peer climate | early adolescence | daily diary study

Early adolescence is characterized by significant developmental changes in social relationships and identity construction (Bukowski et al., 2020; LaFontana & Cillessen, 2010; Laursen & Veenstra, 2021). During this period, peer relationships become increasingly salient and play a central role in adolescents' self-understanding, particularly as their identity formation is a "work in progress" (Laursen & Veenstra, 2021). Within the school context, the classroom environment represents a key social setting where early adolescents interact daily with peers and teachers. In particular, the perceived classroom climate—characterized by respect, inclusion, and supportive interactions—may influence how early adolescents perceive themselves, their future, and life more broadly (Lerner et al., 2005). In this vein, previous researchers have documented a bidirectional relationship between positivity—defined as the tendency to view one's life and future in a positive light (Caprara et al., 2012) — and students' perceptions of a positive classroom and school climate (e.g., Luengo Kanacri et al., 2017). However, these associations have primarily been examined across longer time intervals and have not yet been explored at the daily level during early adolescence. Day-to-day fluctuations in perceived peer relationships and positivity may help to better understand the dynamic nature of early adolescents' everyday social experiences and the interplay between individual dispositions and contextual factors. The present study aimed to address this gap by examining how adolescents' daily peer experiences at school are associated with their perceptions of positivity (and vice versa). Participants were N = 150 students (52% girls; Mage = 12.11, SD = 0.76) recruited in middle schools, who completed a 10-day daily diary, assessing their levels of positivity (item example "today I was satisfied with myself"; Caprara et al., 2012) and perceptions of peer climate (item example "thinking about today, did the students in your class treat each other with respect?"; Spier, 2016). A series of Dynamic Structural Equation Models (DSEMs) were ran to test carry-over effects and the within- and between-person levels reciprocal associations between positivity and peer climate.

Results revealed significant carry-over effects for both positivity and peer climate, indicating day-to-day stability

across the 10 days. Moreover, higher-than-usual perceptions of a positive peer climate on a given day were associated with higher-than-usual positivity the day after. However, the reverse association (from positivity to peer climate) was not statistically significant. Additionally, positivity and peer climate were positively related within-person on the same day. Older participants perceived the peer climate more negatively and reported lower levels of positivity than their counterparts. Males reported higher positivity levels than females. Overall, findings highlight the importance of adolescents' daily peer experiences in shaping their positive outlook on life. Promoting a respectful and inclusive classroom climate may therefore represent a favourable context for fostering adolescents' positivity and supporting early adolescents' positive development during everyday school experiences (Luengo Kanacri et al., 2017).

CARING FOR OTHERS IN LATE CHILDHOOD: SELF-REGULATION, REWARD SENSITIVITY, AND CULTURAL VALUES AS PREDICTORS OF PROSOCIAL BEHAVIOR IN RURAL SCHOOLS.

Eleonora Palliccia (Sapienza University of Rome, Italy) · **Laura Di Giunta** (Sapienza University of Rome, Italy) · **Clementina Comitale** (Sapienza University of Rome, Italy) · **Giuseppina Cannella** (INDIRE, Istituto Nazionale di Documentazione, Innovazione e Ricerca Educativa)

collectivism | reward sensitivity | self-regulation

High-quality education should foster academic learning alongside positive behaviors that allow young people to build foundational skills and values that support an engaged citizenship (Elias et al., 1997). Prosocial behavior, defined as voluntary behavior enacted to benefit another (Eisenberg et al., 2013), fosters social competence and positive citizenship (Caprara et al., 2014). Building on Social Cognitive Theory (Bandura, 2001), prosocial behavior emerges from a complex interplay of multiple determinants (Eisenberg et al., 2013). Parents transmit values through which children view social relationships (Tamis-LeMonda et al., 2007), particularly through collectivist values emphasizing interdependence and concern for the large group. Self-regulation predicts prosocial behavior by enabling children to inhibit selfish impulses and sustain prosocial behavior (Eisenberg et al., 1992). Furthermore, reward sensitivity is positively associated with prosocial behavior in children (Yu et al., 2024), suggesting that children's responsiveness to social rewards facilitates prosocial behaviors. However, little is known about how these personality variables jointly shape prosocial behavior in late childhood. This study investigates how parental collectivism and children's reward sensitivity and self-regulation interact in predicting prosocial behavior. Participants were parents (N=189, 95.8% mothers) of children attending primary schools (55% boys; 47.5% third grade, 24.8% fourth grade, 27.7% fifth grade) within the Italian Small and Rural Schools Network of INDIRE. Parents' collectivism values were assessed using the Individualism/Collectivism Scale (Triandis, 2018). Children's self-regulation was assessed using a composite score of parent-reported measures (Coryn et al., 2009; Elliott et al., 2020; Simonds & Rothbart, 2004). Children's prosocial behavior was assessed through parent-reported Prosocial Behavior scale (Caprara & Pastorelli, 1993). Children's reward sensitivity was assessed through parent-reported BIS/BAS scales (Carver & White, 1994). A multiple regression examined main and interactive effects of parental collectivism, children's reward sensitivity and self-regulation on prosocial behavior, controlling for child gender, grade, school site, parental role and social desirability. Results revealed significant positive effects for self-regulation (β=.241, p=.008) and reward sensitivity (β=.256, p=.002). Moreover, parental collectivism significantly moderated the association between self-

regulation and prosocial behavior (β=.221, p=.022). Specifically, higher self-regulation was associated with greater prosocial behavior, particularly in contexts characterized by higher parental collectivism; whereas parental collectivism was low, differences in prosocial behavior between high and low self-regulation children were smaller. A similar pattern emerged for reward sensitivity: children with higher reward sensitivity displayed higher levels of prosocial behavior when parental collectivism was high, whereas the association was weaker in the case of low parental collectivism (β=.173, p=.042). Overall, these findings suggest that collectivistic parental values may amplify the role of individual motivational and regulatory characteristics in promoting prosocial behavior during late childhood. In line with Social Cognitive Theory (Bandura, 2001), these findings suggest that educational contexts may benefit from recognizing the interplay between individual characteristics and cultural values in supporting children's prosocial behavior.

Participatory and Challenge-Based Learning for Educational Innovation, Active Citizenship and Democratic Transformation

PANEL CONVENORS: Chiara Bassetti (University of Trento, Italy); Marta Villa (University of Trento, Italy)

PANEL KEYWORDS: CBL, resilience, climate change

This panel invites contributions exploring the use of Challenge-Based Learning (Università di Trento, 2024) as an innovative pedagogical methodology to cultivate a responsible and sustainable citizenship. In line with the goal of transforming school and university classrooms into "laboratories for democracy," CBL offers an ideal participatory framework for addressing socio-economic challenges, such as those posed by climate change (Baggen et al., 2024). We seek proposals that analyze how the CBL approach, focused on real-world problem-solving, develops the critical thinking, collaboration, and civic engagement necessary for a democratic response to crises. Ecological challenges—such as promoting biodiversity, intergenerational justice, and sustainability—become the engine for learning, enabling students and teachers to act as agents of transformation (Höffken at al., 2024). The panel encourages a critical analysis of the monitoring and assessment methods associated with CBL, exploring how they can be reimagined as instruments of empowerment rather than control, supporting a more inclusive and active school culture. We will also examine the systemic barriers that limit pedagogical innovation: what competencies are necessary for teachers, and how can institutions overcome the constraints that prevent CBL from effectively addressing complex societal issues like climate change? We welcome interdisciplinary (sociological, anthropological, pedagogical, socio-ecological...) and empirical contributions that position schools and universities as living spaces for democracy in action, capable of shaping critical and aware citizens who can propose long-term solutions for the complexities of environmental and socioeconomic crises (.

CONVERGENT TASKS AS A MEANS OF INTEGRATING BIOLOGICAL, MATHEMATICAL AND DIGITAL KNOWLEDGE: A SYSTEMATIC APPROACH AND MONITORING OF ACHIEVEMENTS

Dinara Chkambayeva (NIS, Kazakhstan) · **Anar Tayapbergenova** (NIS) · **Anar Sovetova** (NIS) · **Yekaterina Vyushkova** (NIS)

psychopedagogy | learning motivation | self-determination theory

In the context of the digital transformation of education, it is not only the transfer of knowledge that is critical, but also maintaining a high level of student engagement. The traditional subject-based approach often leads to a decline in learning motivation due to the lack of visible connections between disciplines. Convergent learning, which combines biology, mathematics and IT, offers a psycho-pedagogical solution to this situation by creating conditions for deep immersion in an interdisciplinary context. It is important to justify the system of convergent tasks as a tool for developing students' subjectivity and internal motivation in the modern digital environment through the mechanism of visualised monitoring. The study is based on a systematic approach and the psycho-pedagogical theory of self-determination (E. Deci, R. Ryan). The key method is the pedagogical design of a hybrid environment, where solving complex bio-mathematical problems is associated with the use of a digital progress tracker. The tracker is seen not as a control tool, but as a means of supporting student autonomy and competence. Convergent problems are a powerful trigger for cognitive interest: the need to use IT tools to solve biological problems transforms the learning task into a research project. The progress tracker acts as an external regulator, promoting the gradual internalisation of motivation: clear visualisation of achievements in a digital environment reduces academic anxiety and increases the “sense of flow”. Psycho-pedagogical effects of monitoring: regular feedback through the tracker increases student engagement, ensuring their active participation even when working with cognitively complex material. In the synthesis of cognitive (interdisciplinarity) and motivational (digital tracking) components within a single pedagogical model. The practical significance lies in the development of methodological tools that allow subject teachers not only to integrate knowledge, but also to manage the motivational climate in the modern learning environment, ensuring the steady progress of each student.

PILOTING AND EVALUATING CHALLENGE-BASED LEARNING IN VOCATIONAL EDUCATION A SOCIO-ANTHROPOLOGICAL PARTICIPATORY APPROACH

Marta Villa (University of Trento, Italy) · **Chiara Bassetti** (University of Trento, Italy)

Participatory approach | Action research | Ethnography

The contribution presents activities carried out within the Erasmus+ project TEACH – Transforming Education: Achieving Innovation through Challenge-Based Learning, which investigates and pilots the integration of Challenge-Based Learning (CBL) in vocational education and training (VET) as a pedagogical approach for fostering active and resilient citizenship. In a context marked by climate crises, socio-economic inequalities, and accelerated technological transformations, VET is likewise called upon to redefine its educational mandate, moving beyond a merely technical-instrumental vision to assume a public function oriented toward social responsibility and democratic participation. Grounded in a theoretical framework that intertwines critical pedagogy, experiential learning, and inquiry-based approaches, the project conceives the "challenge" as an epistemic and social structure of learning. CBL is understood not only as a teaching methodology but as a transformative matrix capable of activating processes of collective problematization, deliberation, and co-construction of solutions in real-world contexts. From this perspective, the classroom is configured as a miniature public sphere (Fine, 2012)—a laboratory of democracy in which students and teachers exercise agency, critical thinking, and intergenerational responsibility (Galdames-Calderón et al., 2024). A central component of the experience was the co-design and implementation of a structured teacher training pathway, developed in a blended format and through a participatory approach involving teachers and school leaders from five European countries (Italy, Portugal, Spain, Romania, and Croatia). The activities integrated theoretical and methodological modules on CBL and its epistemological implications; workshops for the development of interdisciplinary challenges anchored in socio-ecological issues; and tools for fostering professional reflexivity within an emerging transnational community of practice. Teacher education was conceived as a transformative process of professional development aimed at strengthening facilitation skills, collaborative design competencies, and formative assessment practices oriented toward empowerment (Baggen & van den Beemt, 2024). The course has then been made available as an e-learning toolkit, available in several languages. Within this framework, an open badge recognition system was also introduced to formalize and make visible the competencies acquired by teachers who became Teamchers—a hybrid professional figure integrating teaching, mentoring, and the facilitation of complex group processes. The badge does not merely certify learning outcomes; rather, it operates as a device of professionalization and symbolic legitimation, contributing to the construction of teachers' identities aligned with pedagogical innovation and sustainability (Höffken & Lazendic-Galloway, 2024). Micro-credentialing thus becomes a tool of educational governance and a means for consolidating a European community of practice. Preliminary findings from the pilot phase highlight a strengthening of students' transversal skills—critical thinking, collaboration, and project-based agency—as well as a reconfiguration of assessment practices in a more dialogical and inclusive direction. At the same time, tensions emerged in relation to curricular constraints, schools' organizational cultures, and the need for institutional support for a systemic adoption of CBL. Overall, the contribution offers a critical reflection on the potential of CBL in upper secondary education as a pedagogical infrastructure for educational democracy, interrogating the role of teachers' training and professional recognition systems in promoting innovation.

PHOTOVOICE AND PARTICIPATORY DEMOCRACY: PROMOTING AGENCY AND EMPOWERMENT IN THE UNIVERSITY COMMUNITY

Iva Marino (Department of Psychology, Educational Science and Human Movement University of Palermo, Italy) · **Gaetano Di Napoli** (Department of Psychology, Educational Science and Human Movement University of Palermo, Italy) · **Cinzia Novara** (Department of Psychology, Educational Science and Human Movement University of Palermo, Italy)

Photovoice | democracy | empowerment

Ensuring spaces for genuine participation to foster collective agency is a fundamental principle for building democratic communities, especially in academic contexts. Universities, as privileged places for critical learning, must foster students' ability to influence decision-making processes and community life. This study explores Photovoice as a participatory methodology capable of transforming university students into coproducers of knowledge, fostering critical awareness, empowerment, and lived democracy. The project was implemented as part of a teaching experience within the Community Psychology program for community educators and community psychologists. The methodological design was divided into four phases: 1) theoretical training on empowerment, participation and visual methods; 2) guided photographic production, to represent aspects of everyday life that escape common sense, to raise awareness among the academic community and stakeholders, and to advance proposals for change; 3) collective discussions structured according to the SHOWED model; 4) public feedback and deliberative dialogue with academic stakeholders. The empirical corpus comprises 214 photographs. Each student captured, through 10 photographs, their perspective on an outdoor space nestled in a tree-lined green area on campus, which welcomes students for lunch breaks, studying, or socializing with each other and with faculty. This informal yet democratic space represents a space for relationships, where they can build and enhance a sense of belonging to the learning community. Reflexive thematic analysis (Braun & Clarke, 2006), integrated with principles of participatory analysis, highlighted three macrocategories: 1) the gap between formal representation and effective decision-making power; 2) daily micro-practices of informal democracy among peers; 3) structural and symbolic barriers that limit empowerment. The process has produced transformative effects, in terms of operational proposals for improving campus life and for the development of critical and constructive awareness that sees formal and informal leadership engaged in democratic dialogue. The findings suggest that Photovoice simultaneously functions as an epistemic device for community intervention, facilitating the co-construction of meaning and the activation of deliberative practices. The feedback initiative led to the establishment of a joint roundtable with students and faculty to review participatory practices, as well as the creation of a Student Voice laboratory. The study contributes to the debate on democratic education in the university setting, proposing Photovoice as a tool capable of integrating research, critical training and bottom-up transformation.

GEOCIVIS – GEOGRAPHY AND SOCIALLY ACUTE QUESTIONS FOR DEMOCRATIC CITIZENSHIP IN PRIMARY EDUCATION

Giacomo Zanolin (University of Genoa, Italy) · **Marco Lupatini** (SUPSI, University of Applied Sciences and Arts of Southern Switzerland) · **Matteo Puttilli** (University of Florence, Italy) · **Angeliki Kokkoni** (University of Florence, Italy)

Socially Acute Questions (SAQs) | spatial inequality | citizenship education

In increasingly complex and uncertain societies, primary geography education often remains focused on static knowledge, neglecting controversial and future-oriented issues. This limits opportunities for young learners to develop democratic agency and critical awareness of spatial inequalities. In this context, GEOCIVIS Project addresses the challenge of translating geography's disciplinary potential into meaningful engagement with Socially Acute Questions (SAQs) (Catling, 2013; Wilks, 2010; Simonneaux & Legardez, 2010; Floro, 2011; Lupatini, 2021) in primary education, seeking to move

beyond descriptive approaches towards relational and inquiry-oriented conceptions of geographical thinking, so as to frame social, environmental and political processes as spatially interconnected and open to critical investigation. In contemporary societies, primary curricula often acknowledge democratic citizenship as a goal yet provide limited guidance on how SAQs can be approached through disciplinary geographical inquiry. As a result, SAQs are often treated merely as topics, weakening geography's analytical contribution to civic learning. Building on scholarship in geography education and citizenship education, GEOCIVIS explores how SAQs - such as migration, spatial justice, and socio-environmental conflicts - can be introduced as geographical problems and meaningfully integrated into teacher education and primary classrooms in Switzerland and Italy. The project combines literature review, policy analysis, and classroom-based case studies to investigate how curricular expectations around democratic citizenship are enacted in practice, and how inquiry-oriented pedagogies are supported or constrained by institutional and professional conditions. On this basis, it develops multilingual guidelines, scaffolding strategies and practical teaching tools. By fostering argumentation, cognitive decentering, and negotiation of diverse perspectives, GEOCIVIS aims to support teachers in framing geography education as a driver of democratic agency and sustainability from the earliest stages of schooling.

MONITORING INFERENCE GENERATION: AN EXPLORATORY STUDY IN PAPER-BASED AND DIGITAL TEXT COMPREHENSION.

Agnese Vezzani (University of Modena and Reggio Emilia, Italy)

Reading comprehension | inference-making | self-monitoring

Awareness and engagement in reading comprehension are among the most important competencies that schools are expected to cultivate in order to support students' educational success and their democratic access to culture. The PRIN project "Promoting Text Comprehension as a Tool to Make Learning and Thinking Visible" pursued this goal by implementing, in fourth-grade primary classrooms, instructional protocols designed to foster readers' engagement in the comprehension of twelve narrative texts. The present study is situated within this broader research framework and aims to examine how children responded to the prompts of the experimental intervention, which was grounded in the principles and materials of the "text-centered" instructional approach (Cardarello & Lumbelli, 2019; Cardarello & Bertolini, 2020) and was implemented in two formats: paper-based and digital. The instructional protocol required students to work without direct adult guidance, following the prompts embedded in the materials—individually in half of the classrooms and in pairs in the remaining half. The exercises focused on the generation of inferences through challenging questions placed at key points in the text, sometimes repeated after the rereading of selected passages; on metacognitive prompts aimed at justifying one's choices; and on the identification of the most relevant information to support the initial steps toward summarization (Lumbelli, 2009; Cardarello & Lumbelli, 2019). At the end of each session, in both the paper-based and the digital experimental groups, feedback was co-constructed through whole-class discussions that brought to light the different arguments underlying the students' responses. More specifically, the study seeks to explore and document the possible development of awareness processes through which students can recognize their own errors. It examines whether, and for what reasons, children in eight fourth-grade classes (two for each experimental subgroup: paper-individual work, paper-pairs, digital-individual, digital-pairs) revised their understanding of inferential passages by changing their responses after the rereading episodes explicitly prompted by the materials. This focus stems from the well-established view that rereading and repetition of a reader's "thinking aloud" support self-correction (Lumbelli, 2009), and from the

notion that the “error-detection paradigm” is considered one of the most indicative comprehension-monitoring processes reflecting a reader’s metacognitive control (Baker, 1984; Winograd & Johnston, 1982; Sylvestre, 2012). Student responses were collected during the second and ninth sessions of the intervention, seven weeks apart. The results show that, regardless of the format (paper or digital) and the mode of work (individual or paired), children generally struggle to question or revise their initially expressed viewpoint. Overall, the study documents how students engaged with the instructional materials while reasoning autonomously through the experimental protocol and highlights implications for teachers and for future instructional interventions, both in paper-based and digital reading contexts.

BUILDING A EUROPEAN CONSORTIUM FOR INTERCULTURAL PRISON EDUCATION: THE SPARK ERASMUS+ PROJECT

Candelas Bayón Cenitagoya (University of Alcalá, Spain) · **Andrea Sanz de la Rosa** (University of Alcalá, Spain) · **Sofía Antequera Manzano** (University of Alcalá, Spain) · **Carmen Merino Cabello** (University of Alcalá, Spain)

intercultural education | Deprivation of Liberty (DoL) settings | Public Service Interpreting and Translation (PSIT)

Prison education (PE) occupies an inherently paradoxical space: it operates within carceral institutions shaped by punitive logic while simultaneously aspiring to foster critical consciousness, democratic participation, and human dignity. SPARK (Supporting the Penitentiary system Advancement through Reflection and Knowledge about linguistic and cultural diversity) is an Erasmus+ project that aims to advance intercultural prison education and, more in general, deprivation of liberty (DoL) contexts across national contexts where the pressures of penal and security-driven priorities may marginalise transformative educational practice. SPARK brings together partners from across Europe to co-develop a shared framework for intercultural PE, responding to a landscape in which imprisoned populations are increasingly diverse in linguistic, cultural, and migratory terms (SPACE I, 2024), but prison education systems largely remain structured around monocultural assumptions. The project proceeds from the conviction that intercultural education in prison settings is not merely an addition or a reactive measure, but a fundamentally democratic act: one that contests the homogenizing forces of DoL institutions and opens space for hybrid subjectivities, relational learning, and critical reflexivity. Methodologically, SPARK adopts a participatory, consortium-based structure that brings together universities, penitentiary institutions, and NGO-organisations across several European countries, like Italy, Spain, Estonia or Ukraine, aiming to achieve transnational collaboration that enables comparative analysis of how institutional arrangements, professional roles, and policy environments shape the conditions for intercultural educational practice in DoL settings. Particular attention is given to the ethical tensions inherent in researching within closed institutions, including questions of access, positionality, and the asymmetries of knowledge production between academic partners and incarcerated participants. By connecting universities, penitentiary administrations, civil society organisations, and practitioners across different national contexts, SPARK creates a transnational community of practice that challenges the isolation potentially characterising PE initiatives. This contribution reflects on SPARK's design, early findings, and conceptual commitments. The contribution also presents preliminary results from the Spanish working group within the consortium. These include an account of educational initiatives already carried out in Spanish prison settings (both from previous initiatives carried out at the University of Alcalá, and from advances from the SPARK project), the preliminary design of an intercultural education course developed in dialogue with penitentiary practitioners, and an analysis of Spanish policy frameworks concerning translation, language mediation, and interculturality in prison contexts. In doing so, we aim at contributing to broader conversations about how PE can be conceived as a transformative democratic space, and about what an intercultural approach demands from both researchers and institutions.

FROM CLASSROOM TO CIVIC ACTION: CHALLENGE-BASED LEARNING AND THE TEACH EXPERIENCE IN DEMOCRATIC EDUCATION

Claudio Tagliabue (Trentino Social Tank soc. coop., Italy) · **Elisa Poletti** (Trentino Social Tank soc. coop., Italy)

Challenge-Based Learning | Active citizenship | Participatory learning

In a global context marked by democratic backsliding, widening inequalities and accelerating ecological crises, education is increasingly called upon to cultivate critical, responsible and actively engaged citizens. Schools and universities are therefore challenged to move beyond transmissive pedagogies and to experiment with learning environments that allow students to engage directly with complex societal issues. Within this perspective, Challenge-Based Learning (CBL) has emerged as a promising pedagogical approach capable of connecting learning processes with real-world challenges while fostering collaboration, critical thinking and civic engagement. This contribution presents the experience of the Erasmus+ project TEACH, which applies a CBL framework to engage secondary school students across Europe in addressing sustain-

ability-related challenges inspired by the values of the New European Bauhaus. The project involved schools from five European countries and implemented a structured learning pathway in which students worked in teams to analyse local socio-ecological issues, interact with teachers, mentors and community stakeholders, and design concrete proposals responding to environmental and social challenges. This intervention adopts a practice-based case study approach focusing on the implementation of the TEACH Challenge programme, which engaged more than one hundred students in a transnational learning process lasting several weeks. Through iterative phases of exploration, ideation and prototyping, students developed solutions addressing themes such as sustainability, community wellbeing and responsible innovation. The process culminated in a final public presentation of the projects, encouraging reflection on the democratic implications of the proposed solutions. The experience suggests that CBL can function as a democratic classroom laboratory, where learning becomes a collective process of inquiry, dialogue and action. By working on real-world challenges, students develop not only disciplinary knowledge but also civic agency, collaborative competences and a deeper awareness of the interconnections between social and environmental issues. Teachers, in turn, assume the role of facilitators who support participatory learning processes and guide students through complex problem-solving dynamics. Drawing on observations and reflections emerging from the implementation of the TEACH Challenge, the contribution discusses both the pedagogical potential of CBL and the enabling conditions necessary for its effective integration into school systems. Particular attention is given to how such approaches can support the development of active citizenship and sustainability-oriented learning while also highlighting institutional and pedagogical barriers that may limit their broader adoption. By analysing the TEACH experience within the broader debate on democratic education, the paper contributes to understanding how educational institutions can become spaces where democracy is not only taught but actively practiced through collaborative engagement with the pressing socio-ecological challenges of our time.

WHAT DRIVES ERASMUS MOBILITY CHOICES? EU VS. NON-EU DESTINATIONS AMONG ITALIAN STUDENTS

Valeria Caviezel (Università di Bergamo, Italy) · **Anna Maria Falzoni** (Università di Bergamo, Italy) · **Mara Grasseni** (Università di Bergamo, Italy)

Erasmus+ KA171 program · study abroad motivations · study abroad worries

Student participation in Erasmus programmes reflects a complex set of motivations that encompass academic, personal, linguistic, socio-cultural, and career-oriented dimensions. Early empirical research grounded in the push–pull framework highlights that mobility decisions are driven by both “push” forces originating in the home environment and “pull” factors associated with host environments (Mazzarol and Soutar, 2002; González et al., 2011; Gutema et al., 2024). Motivational analyses of Erasmus students have consistently identified academic and professional development as principal drivers of mobility, but even students’ desire for personal growth and intercultural competence emerges as a salient intrinsic incentive (Van Mol and Timmerman, 2014; Lesjak et al., 2015; Cuzzocrea and Krzaklewska, 2023). However, international students’ mobility may be hampered by the presence of barriers that higher education students face. Therefore, it is important to look at the fears and apprehension of students that retain them in their home country (Souto-Otero et al., 2013). Distance between home and host countries is considered a key factor influencing the intensity of mobility flows, reflecting transport costs, psychological barriers and cultural affinities (González et al., 2011). In the classical intra-European Erasmus context, shorter geographic distances and cultural proximity have historically facilitated student choices of nearby host countries, reducing logistical and financial frictions associated with mobility. However, as the Erasmus+ KA171 program broaden the range of eligible destinations to include extra-European partners, the geography of student choices becomes more heterogeneous, and a broad strand of literature focused on the factors that prompt students to choose one country and avoid others (Barnett et al. 2016; Kondakci et al. 2018). For Italian students, broader structural changes in travel behaviour, such as the proliferation of low-cost airlines and changing preferences towards

global experiential learning, can mitigate the "distance cost" traditionally associated with non-European destinations. Increased exposure to international travel and tourism at a young age may render extra EU destinations more attractive, both for their academic offerings and cultural enrichment potential. This paper investigates whether, and to what extent, students' individual characteristics and background factors influence their propensity to apply for Erasmus mobility to Extra-EU destinations, which involves destinations that are geographically and culturally more distant from Italy than those within the European Union, versus EU destinations. The empirical analysis relies on survey data collected by an on-line survey administered to students who apply to international mobility. We collected data on 809 students at a medium size Italian university – the University of Bergamo – that applied for an Erasmus+ or Extra-EU Program in the last two academic years (from 2024/25 to 2025/26 a.y.). The results, in line with the literature (Souto-Otero et al. 2013; Daly, 2011; Schnepf, 2022), suggest that, ceteris paribus, study experiences in countries outside Europe are primarily driven by strong personal motivations, while they are discouraged by concerns related to academic performance and learning outcomes. However, the findings also suggest that the role of motivations and perceived academic risks in shaping students' international mobility choices varies substantially across fields of study, gender and family background.

THIRD MISSION, INTERRELIGIOUS DIALOGUE AND TRANSVERSAL PATHWAYS TO COUNTER ANTI-SEMITISM, ANTI-GYPSYISM, AND ISLAMOPHOBIA: A HISTORICAL-RELIGIOUS, SOCIO-POLITICAL, AND INTERSECTIONAL PERSPECTIVE

Bernadette Fraioli (Sapienza University, Italy)

Third mission | interreligious dialogue | citizenship education

Even though societies are increasingly interconnected and religious and ethnic diversities should be constitutive elements of plural democracies, persistent social representations, stereotypes, and hate speech towards specific ethnic and religious groups continue to fuel specific forms of racism, often resurfacing throughout history. The study of religious pluralism finds in the works of Émile Durkheim, Max Weber, Peter L. Berger, and Niklas Luhmann four fundamental theoretical frameworks for understanding the relationship between religion, society, and education. For Durkheim, religion functions as a source of social cohesion through shared symbolic representations; in pluralistic contexts, however,

education can no longer reproduce a single collective conscience, but it must foster integrative values capable of sustaining social solidarity amid diversity. Weber interprets pluralism as a consequence of rationalization and the differentiation of value spheres: education thus becomes a space for cultivating reflexive individuals able to navigate competing worldviews.Berger emphasizes that modernity transforms religion into one option among many within a competitive "market of meanings": in this context, education plays a crucial role in developing awareness of the socially constructed character of belief systems and encouraging dialogical engagement. Luhmann conceptualizes religion and education as autonomous subsystems within a functionally differentiated society; in this framework religious pluralism is a structural outcome of social complexity and education provides individuals with communicative competencies necessary to manage diversity in systems of meaning. By integrating these perspectives, intercultural and interreligious education emerges not merely as diversity management, but as a formative process that prepares individuals to live in structurally plural societies and share civic values, enabling coexistence across religious differences in contemporary societies. In the broader context of the Academy's Third Mission and the paths for cross-cutting skills and guidance, the synergy between schools and universities can play a pivotal role in shaping the identities of students and in developing a sense of global citizenship. This paper will analyze two cases studies: the "At School for Dialogue and Peace" project for high school students to provide them with counter-narrative tools against anti-Semitism, anti-Gypsyism, and Islamophobia, by combining a historical exploration of ethnic and religious diversities with immersive experiences such as visits to places of worship, personal accounts of discrimination, and insights on the artistic means employed by second generations to fight prejudices and advocate for religious freedom and recognition of themselves as Italian citizens; opportunities for university students, ordinary citizens, and religious communities to meet and exchange ideas as part of the Third Mission project "Dialogues of Peace."

CHALLENGE-BASED LEARNING IN PRACTICE: A FIRST-PERSON REFLECTION IN HIGHER EDUCATION

Elena Mazzaccara (Università degli Studi di Trento, Italy)

Challenge-Based Learning | Abductive Reasoning | Reflexive Practice

This contribution reflects on my experience in the courses "Research Laboratory on Technology and Organization" and "Research Laboratory on Information Systems" within the Master's program in Organization, Society and Technology at the University of Trento, both structured according to the Challenge Based Learning (CBL) model (Nichols et al., 2016). The six-month learning process alternated theoretical lectures, hands-on laboratory activities, applied field research, and discussion with peers, teachers and external stakeholders involved in the project. The expected outcome consisted of a final group report integrating the two components of each laboratory: a qualitative research analysis and a project proposal addressing needs identified throughout the research process. In my case, my group focused on a requalification project promoted by the Municipality of Trento concerning the future opening of a youth center. Through qualitative methods, our group explored the complex tangle of desires, guidelines, and needs expressed by the various actors inhabiting the area and its potential future users. The alternation between theoretical inputs and fieldwork fostered continuous negotiation between conceptual frameworks and empirical complexity, in a process that I later recognized as abductive (Timmermans & Tavory, 2012). Initial uncertainty and ambiguity in the research process gradually became an integral part of our learning, shaping how we approached challenges and negotiated meaning collectively. My group faced challenges in developing a cohesive working approach. The uneven engagement forced me to reflect on my own role within collaborative research and ultimately viewing these dynamics as an integral part of the learning experience. In this sense, even if the

outcome did not fully represent the richness of the work, the experience proved deeply formative at an individual level. Reflexive tools, including individual Learning Agreements, a collective Learning Diary and a personal logbook, supported a continuous reflection during the courses that ended in a final position paper. The combination of qualitative methods and the CBL pedagogical structure created an open learning process that helped me engage with the challenge while fostering reflexive awareness of the research process, shifting attention from the final output to the process itself. Furthermore, tasks were not evaluated through formal grades but through continuous feedback that allowed us to learn from our mistakes and encouraged the growth of tacit knowledge (Polanyi, 1966). Rather than seeking a final, static truth, the investigation evolved into an open-ended dialogue among the researcher, the field and the research process. The classroom became a space for negotiating theory and practice within an open and democratic structure that embraced uncertainty, enabling critical reflection, fostering innovative experimentation and engaging with real-world contexts.

CHALLENGE-BASED LEARNING AS A CATALYST FOR SOCIAL INNOVATION AND AGENCY

Francesca Odella (University of Trento, Italy) · **Alessandra Scroccaro** (University of Trento, Italy)

Active Citizenship | Social Innovation | Transdisciplinary Education

“Challenge-Based Learning (CBL) is an important innovation within the field of education that takes learning beyond traditional methods to provide students with authentic challenges and equips them with skills that they will use in their future careers. With its emphasis on critical thinking, collaboration and communication, CBL also provides valuable transversal skills that can be used in a wide range of situations and work settings such as to complement the specific skills and knowledge required to solve a specific challenge” (Dikilitas et al, 2025). Enacting this perspective, this paper reflects on the implementation of CBL within university programs, specifically focusing on blended intensive programs (BIPs) and courses conducted at the School of Innovation (SOI) since 2020. These courses are designed to equip students with transdisciplinary tools to address the European Union’s most pressing challenges—Inclusion, Diversity, and Sustainability —through a proactive, future-oriented approach. By discussing the social and community impacts of this pedagogical innovation, the authors present outcomes from programs designed to strengthen younger generations' reflection on the community impact of global socio-political transitions. Our core contribution is to propose CBL as a ‘catalyst’ for social innovation, guiding students and teachers toward a resilient approach to current economic and technological transformations. In these innovative programs, educators can teach young people to view the future as a "tool for emancipation" (Appaduraj, 2013) and develop a sense of agency regarding unforeseen alternatives.To develop these anticipatory skills, students must build confidence in their ability to engage with knowledge (Engstrom, 1994) and address the social aspects of learning, such as cooperation and the negotiation of meanings and study practices. Through CBL group practices, students also learn to navigate cultural differences in communication and teamwork, improving their civic attitudes and relational skills. Furthermore, implementing CBL requires active societal engagement from both students and teachers, demanding a shift in attitude toward knowledge creation processes and circulation. This effort is essential when involving external stakeholders—such as NGOs and local companies— in their projects and is at the heart of effective global collaboration. Ultimately, introducing CBL in university curricula generates impacts that transcend the academic community (Kazemier et al., 2021), fostering a generation of "transdisciplinary social entrepreneurs" capable of navigating complex socio-political crises with empathy and participative agency.

QUEERING EDUCATIONAL SPACES: THE INTERSECTION OF FUTURES STUDIES AND CHALLENGE-BASED LEARNING FOR ACTIVE DEMOCRATIC CITIZENSHIP

Gianpiero Monittola (Univeristy of Trento, Italy) · **Stafano Turrini** (Univeristy of Trento, Italy) · **Lorenzo Angeli** (Univeristy of Trento, Italy)

Challenge-Based Learning | Futures Studies | External stakeholders

Our contribution explores the experience of two Educational Learning Offers (ELOs) at the School of Innovation (SOI), University of Trento, integrated into the broader offer of the European Consortium of Innovative Universities (ECIU). The ELOs were designed around challenges faced by two startups working with microalgae (microscopic organisms with potential applications in CO_2 capture and the circular economy). While the content was primarily scientific, technological, and economic, our focus here is methodological. Specifically, we experimented with: Integrating Challenge-Based Learning (CBL) with futures studies tools, such as the Futures Wheel and the Futures Cone, to provide students with structured approaches for critical thinking and scenario building. Starting from real-world challenges, the goal was to support students in exploring multiple futures, questioning assumptions, and imagining innovative solutions. Creating a productive tension between divergent and convergent phases: educators encouraged exploration, creativity, and speculative thinking, while external partners (Challenge Providers) guided students toward feasible, actionable outcomes. Through reflection on the two editions, we identify both the strengths and limitations of this model. We frame it as a form of "queering" educational spaces, in a broad sense: deliberately challenging traditional teaching practices and assumptions. Ultimately, our contribution demonstrates that the synergy between CBL and futures studies can foster inclusive and transformative learning experiences. Students are empowered to become agents of change, capable of navigating ecological, technological, and social transitions. This model highlights the potential of higher education to equip learners with the knowledge, skills, and imagination necessary to design a more sustainable future.

Monittola, G., Turrini, S., & Angeli, L. (2026). Intersecting futures studies and challenge-based learning: Elements of queering in futures education. Futures, 176, 103789. https://doi.org/10.1016/j.futures.2026.103789

ROMA DESIGN EXPERIENCE: A SYSTEMIC CHALLENGE-BASED LEARNING MODEL FOR ACTIVE CITIZENSHIP AND SOCIAL INNOVATION IN DESIGN EDUCATION

Valerio Pasquazi (ISIA Roma Design, Italy) · **Giovanna Merialdo** (ISIA Roma Design, Italy) · **Sara Andreozzi** (ISIA Roma Design, Italy) · **Sonia Massari** (Università di Pisa) · **Massimiliano Datti** (ISIA Roma Design, Italy) · **Tommaso Salvatori** (ISIA Roma Design, Italy)

Challenge-Based Learning (CBL) | pedagogy | democracy

In recent years, design education has increasingly been confronted with systemic challenges such as climate change, social inequalities, and the transition toward sustainable development models. In this context, higher education institutions are called upon to move beyond predominantly theoretical teaching models and to develop competencies capable of addressing complex and situated problems (Don Norman, 2023). In response to these transformations, pedagogical approaches based on experiential and collaborative learning have gained increasing attention, among which Challenge-Based Learning (CBL). This approach organizes educational pathways around real-world challenges addressed through interdisciplinary processes and in collaboration with external stakeholders. Such pedagogies enable students to apply academic knowledge in real contexts, fostering the development of critical thinking, problem-solving skills, and a greater sense of responsibility toward contemporary socio-environmental challenges (Höffken & Lazendic-Galloway, 2024). This contribution examines the Roma Design Experience (RDE), developed at ISIA Roma Design since 2018 and now in its eighth edition, as a consolidated model of intensive and collaborative learning based on real-world challenges. The format temporarily reconfigures the traditional learning environment into a five-day laboratory where the challenges addressed focus on crucial issues such as climate change, heritage preservation, accessibility, and sustainability. This space is characterized by a horizontal, peer-to-peer structure in which heterogeneous groups composed of undergraduate and graduate students, faculty members, PhD candidates, tutors, and external stakeholders, including public institutions, third-sector organizations, and local communities, collaborate in defining and addressing real-world challenges. The paper explores how challenge-based design workshops can function as devices of democratic pedagogy capable of fostering

collaboration, critical reflexivity, and forms of student agency. Studies on event-based design education highlight how intensive and collaborative formats can activate situated and interdisciplinary learning processes in design education (Massari et al., 2024). From this perspective, the challenge is not conceived as a predefined brief but as a problematic situation to be collectively explored through practice-based methodologies. The contribution therefore aims to map the development of critical, relational, and socially oriented competencies, while also observing enabling conditions of collaborative learning environments, including inclusivity, quality of facilitation, and psychological safety within the group. Building on observation tools developed within the Rome Design Experience, the research analyzes indicators related to the development of critical thinking, collaborative dynamics, and awareness of the social impact of design projects (Massari et al., 2024; 2025). In order to capture more intangible dimensions of the educational experience, the study introduces the Multimodal Reflective Device (MRD), which integrates micro-narratives and visual languages to support non-linear forms of reflection (Gaver, 2012). The analysis adopts a mixed-methods approach, combining qualitative and quantitative data to observe the development of collaborative and civic competencies and to evaluate enabling conditions within the learning environment. Preliminary findings suggest that the RDE model can act as a catalyst for transformative agency, encouraging students to move from executors of design briefs to active mediators of social change. Finally, the contribution discusses the transferability of the model by comparing the Roman experience with international adaptations such as D.I.S.ba and the São Paulo Design Experience 2026.

Childhood and Democracy in the Digital Age: Building the Foundations of Active Citizenship

PANEL CONVENORS: Giuseppe Valentino (UniPegaso, Italy); Francesca Marone (University Of Naples Federico Ii, Italy); Maura Striano (University Of Naples Federico Ii, Italy)

PANEL KEYWORDS: childhood, pedagogical innovation, digital literacy

Childhood represents the critical foundation upon which democratic participation and social responsibility are built. In contemporary digital societies, children encounter algorithmic systems, social media platforms, and educational technologies that profoundly shape their cognitive development and social relations from early ages. Understanding how to foster democratic values in the digital age represents an urgent pedagogical and societal challenge. This interdisciplinary panel explores the intersection of childhood, digital literacy, and civic formation, investigating how democratic values can be effectively raised through early education. The panel invites contributions addressing four dimensions: First, pedagogical innovation: How can early education integrate digital and civic learning to foster critical thinking and active participation rather than passive consumption? Second, ethical and relational dimensions: How can educators support children in recognizing fairness, inclusion, and cooperation within technologically mediated environments? Third, institutional and community contexts: How can schools, families, and communities collaborate to establish participatory ecosystems that empower children as active citizens? Fourth, comparative and policy perspectives: Which educational models and policies most effectively balance protection with meaningful participation in children's digital experiences? By drawing on perspectives from pedagogy, philosophy, sociology, and technology studies, this panel seeks to rethink childhood as a democratic space where foundations of inclusion, empathy, and critical awareness are constructed. The panel aims to create substantive dialogue among educators, researchers, and policymakers to envision innovative frameworks for democratic education from the earliest stages of development, ultimately transforming how societies prepare children for meaningful democratic engagement.

EMOTIONS IN DIGITAL ENVIRONMENTS: BUILDING CRITICAL AND PREVENTIVE EDUCATIONAL PRACTICES IN SARDINIAN SCHOOLS

Laura Pinna (Università degli Studi di Sassari, DUMAS, Italy) · **Maria Luisa Lasio** (Università degli Studi di Sassari, DUMAS, Italy)

Adolescents | emotions | digital environment

Adolescents are increasingly immersed in digital environments where interactions often show limited respect for others' emotions and dignity, and sometimes escalate into unlawful behaviors. In response to these challenges, several upper-secondary schools in the Cagliari metropolitan area have developed projects in collaboration with expert professionals and local institutions, aiming to help students gain awareness of the emotional dimensions underlying their online actions. The empirical study presented here was carried out over three years and involved first- and second-year high school students working in small, heterogeneous groups. Through multimedia materials—videos, news articles, personal narratives, and testimonies—students were encouraged to discuss their experiences, reflect on the emotions emerging during these exchanges, and learn to identify and articulate them. This process addressed a likely lack of emotional scaffolding from primary socialization agents. Participants were also guided toward empathic reflection on the experiences of cyber-bullying victims, who were often perceived as "frozen" or "emotionless" within digital settings. Given students' initial reluctance to engage with these topics, project facilitators worked to establish a climate of trust that gradually enabled more open discussion and self-exploration regarding digital behaviors. The initiative ultimately sought to help young people become more familiar with their own emotions, recognize and name them, and understand how they may become blurred or dissociated in virtual spaces. The contribution will present the main findings emerging from these interventions, highlighting effective practices as well as critical issues, especially in light of the limited availability of in-depth national research on this phenomenon.

BUILDING INTERPERSONAL TRUST IN DIGITAL CONTEXTS TO ENHANCE DEMOCRATIC ENGAGEMENT. THE ROLE OF GENDER

Isabella Quadrelli (Univeristy of Urbino Carlo Bo, Italy) · **Maria Gabriella Pediconi** (Univeristy of Urbino Carlo Bo, Italy) · **Michela Brunori** (Univeristy of Urbino Carlo Bo, Italy)

Online trust | Adolescents | gender

Building on the discussion of research findings, the paper examines adolescents' practices for building interpersonal trust in digital contexts and explores ways to critically reflect on the approaches and skills needed to enhance adolescents' digital literacy for democratic engagement. Trust and democratic engagement are deeply connected and mutually reinforcing; trustworthy relationships enhance cooperation and social ties, and social participation fosters citizens' contacts, mutual understanding, reduces fears of others, creating the conditions for building trust. Trust and public engagement are considered by Putnam (2000) to be essential components of social capital. Adolescents use social media to maintain relationships with friends and acquaintances and to create opportunities for new interpersonal interactions. Online relationships, especially those involving people who are not part of the offline network, occur in contexts characterized by high uncertainty. In such context, social network's users create and negotiate new strategies for reducing uncertainty in relation to the material actants (Hepp 2022) that populate situated interaction contexts (Roberts, S., & Ravn, S. 2019). Trust is a form of social action that reduces uncertainty and social complexity, thereby increasing decision-making and sociality (Seligman 1997; Luhman, 1979; Sztompka, 1999; Simmel, 1989). In the field of adolescents' use of social media, practices are relevant for observing young people's agency (Hepp 2022; Costa 2018) and for overcoming the "influence" approach that considers users as passive and shaped by technological infrastructures. We present findings from the action research project informed by the agency approach, promoted by the University of Urbino, entitled "Building trust in adolescents' digital relationships". The project involved 99 adolescents with an average age of 16.6 (24 males and 75 females). Visual methods were used to explore students' practices in social networks (Instagram) when contacting peers who are not part of their friends' network. They were asked to fill a template resembling an Instagram profile they could trust, by highlighting elements (photo, posts, bio description, etc.) they considered relevant. Findings show that adolescents are active and reflexive actors when engaging in online relationships. Gender is a relevant factor in shaping online practices: both male and female adolescents refer to a female profile when drawing the identikit of the trusted other. Moreover, she is an authentic person, as she discloses her name and basic information about her life and interests. Girls are more willing than boys to start online relationships with the intention to continue them in offline contexts. Such findings show that online environments are not just contexts rife with risks, but highly normed spaces where adolescents exercise their agency and moral judgement. Policies and digital literacy interventions should be oriented toward fostering digital agency, that is "the capacity to critically and safely navigate the Internet, enabling youths to express themselves, seize opportunities offered by Internet technologies, and safeguard themselves against potential online harm, often negotiating and challenging existing social norms and structures" (Choroszewicz 2024: 3). Our findings suggest that such a perspective could help children and adolescents to develop skills for participation and consultation both in online and offline communities.

CONNECTING GENERATIONS. USING GRANDPARENTS' MEMORIES TO BUILD CLASSROOM COMMUNITY

Stefano Costantini (Dipartimento di Formazione, Lingue, Intercultura, Letterature e Psicologia (FORLILPSI) - Università degli studi di Firenze, Italy)

In Class Well-Being | Family Memories | Historical Culture

In a European context marked by increasing multiculturalism and by pervasive use of digital technologies in the construction of identity (Landsberg, 2015), this contribution presents phases of a research project carried out in a heterogeneous, multicultural, and multilingual fifth-grade classroom in a school at the center of Florence. The study examines the hypothesis that history education — understood here as the intergenerational transmission of memories with historical value — can promote greater mutual understanding, inclusion, and the development of intercultural historical competence (Green, 2019) when mediated through grandparents' or parents' narratives and supported by active methodologies (Barton & Levstik, 2021). The project involved 22 students (12 Female; 10 Male), including 8 with culturally diverse backgrounds. The young fifth-grade students were therefore divided into two clusters ("Italian students" and "Students with a different cultural background") exclusively for research purposes. An initial focus group between two student clusters revealed that students' knowledge of one another was limited and often shaped by stereotypes. To overcome these barriers, the project required students to administer an open-ended questionnaire to their grandparents (and, in some cases, to their parents) to collect autobiographical narratives related to seven crucial areas of their lives: family traditions, social relationships, schooling, work, leisure, personal and collective memories. The collected stories made it possible to compare experiences originating from highly diverse contexts - from descriptions of postwar Italy to the wartime scenarios of the Balkan conflict (territories of the former Yugoslavia), as recounted by both a Serbian grandmother and a Croatian grandfather, and further to narratives of migration from rural communities in Honduras and Albania - thereby offering a plurality of historical and cultural perspectives. The unique and personal narratives shared by grandparents played a decisive educational role, confirming what the literature highlights regarding the value of family memory in shaping narrative identity, historical consciousness and socio-emotional competences (Souralova, 2020). The sharing of these stories in the classroom created a new space for dialogue, fostering processes of decentring, adoption of alternative perspectives, and a critical reading of cultural representations; in other words, it effectively supported an intercultural approach to historical learning (Nordgren & Johansson, 2015). Subsequently, a second focus group revealed a significant shift; students demonstrated greater openness, curiosity, and an enhanced ability to recognize mutually the complexity of their peers' backgrounds. Despite the limitations of a small sample, the practice showed that intergenerational transmission can serve as an effective pedagogical resource for promoting inclusion, historical thinking and global citizenship in multicultural school settings (Rantala et al., 2023). The grandparents' narratives provided the class with a new 'common ground', contributing to the construction of a shared historical heritage and to appreciation of cultural diversity. The experience suggests that reciprocal knowledge rooted in family stories can emerge as a decisive factor in overcoming stereotypes and in fostering a deeper relationship between school, family and community, thereby generating a participatory ecosystem in which young students are valued as active citizens capable of building a sense of belonging (Buchanan & Fivush, 2023).

CULTURAL HERITAGE AND ACTIVE CITIZENSHIP: TRANSMEDIA ECOSYSTEMS FOR DEMOCRATIC EDUCATION IN EARLY CHILDHOOD

Ilaria Curci (Università degli Studi di Napoli Federico II, Italy)

Cultural heritage education | Early childhood education | Active citizenship

In contemporary societies, based on a culture of convergence, promoting democratic values—belonging, care for the common good, active citizenship—requires pedagogical approaches capable of engaging with and embracing digital languages without reducing the educational experience to passive consumption of content. The challenge lies in transforming technologies into tools for authentic participation from the earliest ages. The theoretical framework of this paper centers on cultural heritage (CH) education in its tangible and intangible dimensions, viewing CH as a privileged reservoir of experiences, meanings, and collective memories from which to draw in order to develop cognitive, social, and civic competencies. From this perspective, CH is not conceived as a closed disciplinary content, but as a democratic and communal space in which learners engage in practices of citizenship: they recognize their cultural belonging, develop critical awareness of the places they inhabit, and assume responsibility for the commons. This vision is rooted in the values of the Faro Convention and the National Plan for Cultural Heritage Education, which recognizes cultural heritage as playing a fundamental role in promoting peace, inclusion, and social integration, as well as providing an authentic and motivating context within which learning acquires meaning and becomes grounded in lived reality. It is also hoped for a critical and informed use of the channels and forms of expression offered by digital technologies as a vehicle for the broad inclusion of diverse social and cultural components through processes of identity construction, citizenship education, and the promotion of intercultural dialogue, in line with the design of civic education (Law 92/2019) and the Guidelines for the cross-curricular teaching of civic education (Ministerial Decree 183/2024). The paper illustrates an action-research experience conducted as part of the UNESCO Project for the Knowledge and Dissemination of the Universal Value of the Historic Center of Naples, developed in collaboration between the Observatory on Governance for Education in Cultural, Artistic, and Landscape Heritage (OGEP3 Unina) of the University of Naples Federico II, the Municipality of the City of Naples, three local comprehensive schools, and the innovative startup GRETA s.r.l. The program and workshop activities, focused on the key competencies of the 2018 EU Recommendation—digital, civic, and cultural awareness—placed the children in the role of creators: producers of multimodal cultural content and active builders of shared meanings within their own territory. The project developed a transmedia ecosystem of interactive cognitive artifacts based on XR technologies, structured into three complementary educational tools and integrated into the bilingual kit *Discovering the Historic Center of Naples, a UNESCO Site*. Through openness to the active participation of the public, communities, and schools, a willingness to listen, engage in dialogue, and highlight diverse perspectives, cultural sites have become spaces for the reappropriation and reinterpretation of individual and collective identities. The emerging model, founded on collaborative public-private governance, interdisciplinarity, and experiential grounding, offers concrete guidelines for designing inclusive educational environments where democratic values are built through doing, narrating, and sharing with the support of digital technology.

DIGITAL COMPETENCE IN EARLY CHILDHOOD: THE GUIDELINES FOR DIGITAL EDUCATION IN THE DI.CO.EACH PROJECT

Cosimo Di Bari (University of Florence, Italy) · **Claudio D'Antonio** (University of Florence, Italy)

digital competence | early childhood | media education

The widespread use of digital tools in everyday life is also having a growing impact on children's lives. The way these devices are used during childhood is a significant factor in the education of citizens: although pediatric guidelines advise against exposure during the first two years and although use accompanied by an adult is recommended, passive use or situations in which the adult uses the device without being present at the child's side are frequent (Common Sense Media, 2025).The PRIN Di.Co.Each. project, developed in collaboration between the University of Florence, the University of Rome La Sapienza, and the University of Bologna, aimed to explore effective strategies for building digital competence from early childhood. Following a literature review, an interdisciplinary team conducted qualitative and quantitative research to assess the use of digital tools in children's lives and to survey the perceptions of families, educational services staff, and pediatricians. The project then included action research involving educators and teachers, which led to the design and implementation of digital education experiences with children and families (Di Bari, Demozzi, Metastasio, 2026). Action research experiences have demonstrated the usefulness of a playful approach that also includes the use of digital media to explore the limits and possibilities of digital devices and that helps adults understand the need for support for children during their use. At the same time, research highlights how digital exploration experiences can be enriched by a playful framework and by exploring cross-fertilization with analog media. Nursery and preschool staff, starting with specific education, should then be equipped with the skills to design activities that effectively promote cross-fertilization. While educational services have the urgent task of raising families' awareness of their uses, it can also be beneficial to consider projects that combine traditional experiences with experiences in which digital tools, through their specific characteristics, can provoke questions, spark curiosity, encourage observation, and foster new explorations and achievements (Buckingham, 2019; Tisseron, 2023; Marangi, 2023). These experiences provided input for the development of two guidelines, aimed respectively at families and educational services staff for children aged 0-6. The presentation will focus on the findings of the research and on the experiences of dissemination and discussion, seeking to reflect on the role of the educational alliance (between educational services and families) in building digital competence. ased on the findings of the Di.Co.Each. research, it is crucial to ensure that adults caring for children are informed and trained regarding the risks and potential of digital tools. A fundamental task is to nurture the educational relationship through digital technologies and, at the same time, gradually offer children the opportunities to become active, aware, critical, and creative citizens.

DIGITAL OBSERVATION IN PRESCHOOL SETTINGS: BETWEEN ETHICAL COMPLEXITY AND EDUCATIONAL INNOVATION

Emilia Restiglian (University of Padova, Italy) · **Paola Zoroaster** (University of Padova, Italy)

Video-based research | Early childhood education | Digital data ethics

In contemporary information society, characterised by rapid social changes, digitalisation has become increasingly central in educational practices. Technology is no longer merely an operational tool but constitutes a relational environment that helps shape practices of participation, collaboration, and democracy (Danby et al., 2018; Raffaghelli et al., 2025). Within this context, the dichotomy of the advantages and disadvantages of technology, particularly in the education of children aged 0 to 6, remains a subject of intense debate across the pedagogical, sociological, and psychological literature. This debate represents a significant challenge for promoting ethically responsible educational practices oriented toward

children's active participation (Livingstone, 2016). In this scenario, video recording is still a valuable methodological tool, allowing researchers and educators to examine social interactions retrospectively and to render visible dynamics that would otherwise be difficult to document (Galliani & De Rossi, 2014; Migliarini et al., 2019). For researchers, video technologies enable a more in-depth analysis of socio-educational processes and contribute to the production of new knowledge. However, while technology can support educational work, it also raises ethical challenges that require careful consideration. Drawing on a doctoral research project exploring peer feedback in early childhood, which develops a categorization of feedback types based on the Hattie & Timperley (2007) model, this contribution examines video-based data collection practices in preschool settings. The focus is on issues related to obtaining informed consent from school administrators, parents, and children, as well as the extent to which the presence of a camera might influence children's behavior and the authenticity of observed interactions. Furthermore, the study highlights how video-based educational practices facilitate the systematic "listening" to children, bringing their perspectives and modes of participation to light. This listening constitutes a central element of teachers' pedagogical planning, guiding their decisions and educational actions (UNCRC, 1989, Art. 12). Simultaneously, this contribution emphasizes how video technologies can support reflective practices among teachers, allowing for a detailed analysis of the interactions, social dynamics, feedback types, and educational styles that shape the production and reception of peer feedback. From this perspective, video technology is conceived not only as a research tool but also as a means to make children's experiences, forms of participation, and democratic learning visible and documentable, providing teachers with tools to observe and engage families (Mascheroni et al., 2018). The reflections presented offer insights into the debate on educational policies regarding the use of technology in early childhood. They emphasize the need for regulations that balance the protection of children with their meaningful participation in digital experiences, in full accordance with the UNCRC (1989, Arts. 12, 13, 17). Ultimately, this contribution aims to stimulate discussion on the relationship between technology, ethics, and educational democracy in early childhood, framing technology both as an opportunity for critical reflection and methodological innovation and as a domain requiring particular responsibility, sensitivity, and attention.

DEMOCRACY IN THE EARLY YEARS OF LIFE: THE CONTRIBUTION OF SOCIAL WORK TO BUILDING EDUCATING COMMUNITIES WITHIN THE INTEGRATED 0–6 SYSTEM

Francesca Schir (Libera Università di Bolzano, Italy) · **Diletta Mauri** (Libera Università di Bolzano, Italy)

Democratic education 0–6 | Educating community | Child protection

Democratic education in early childhood requires a paradigm shift: from fragmented, sector-based interventions to local ecosystems capable of integrating rights, care, participation, and social justice. Within this perspective, the project Social Services and the Educational Community for Early Childhood was developed through collaboration among Save the Children, the National Foundation of Social Workers, and the Free University of Bozen-Bolzano, with pilot implementation in the Municipality of Bari. The project frames childhood not as a preparatory phase, but as a political and generative space where belonging, agency, effective access to rights are shaped. Its theoretical framework is grounded in three key dimensions: the centrality of the first 1.000 days for neurobiological, emotional and relational development; the evolution of the 0–6 system toward a universal and inclusive model; evidence that early access to high-quality educational services

can reduce social and cultural disadvantage. In line with Legislative Decree 65/2017 and European guidelines on inclusive Early Childhood Education and Care (ECEC), the research investigates a still underdeveloped issue: the role of social work in local governance and interprofessional co-design across educational, social, and health sectors. Methodologically, the study adopts a qualitative participatory action-research approach. The design involves about 25 professionals from social services, third-sector organizations active in 0–6 provision, nurseries, and preschools. The training and reflective pathway – structured through online modules and in-person workshops – includes pre- and post-questionnaires, two rounds of focus groups (at the end and six months later), and in-depth interviews with social workers. The goal is to identify professional learning processes, transformations in practice, organizational challenges. Training is considered not only a pedagogical device but also an observational context for examining the emergence of shared professional language, inter-institutional trust, and the capacity to activate rights-oriented local networks for children and families. A core axis concerns child protection and parenting support as structural levers for reducing inequality. Protection is conceived in preventive terms, emphasizing early identification of vulnerabilities (economic, relational, housing, and educational), integrated case management, and continuity during critical family transitions. Parenting support is understood as empowerment: listening, guidance, cultural and linguistic mediation, promotion of educational competencies, and facilitation of access to rights and local opportunities. From this perspective, 0–6 integration performs a concrete redistributive function by lowering material, informational, and symbolic barriers; reducing service fragmentation; strengthening trust between families and institutions; and making universalism effectively accessible, especially for the most vulnerable households. Territorial laboratory activities – including co-construction of a Manifesto of the Educating Community, mapping of 0–6 services and spaces, and analysis of relationship quality among local actors – show how participatory practices can make informal resources, service gaps, and underserved groups visible, enabling contextualized and inclusive micro-planning. Expected outcomes operate on three interconnected levels: professional (defining the profile of the 0–6 social worker), organizational (strengthening multi-actor governance), and pedagogical-political (consolidating educating communities as democratic infrastructures of proximity). The project ultimately proposes rethinking the relationship between education and democracy from early childhood onward by embedding protection, participation, shared responsibility, and equity as ordinary practices of social citizenship.

PROTECTING CHILDREN FROM THE RISKS OF ALGORITHMIC BIAS AND AMPLIFIED DISCRIMINATION OF AI THROUGH EDUCATIONAL STRATEGIES AND DEBIASING TECHNIQUES

Rosaria Capobianco (Università degli studi di Napoli Federico II, Italy) · **Maria Rosaria Strollo** (Università degli studi di Napoli Federico II, Italy)

Algorithmic Bias | Artificial Intelligence | Critical Thinking

The AI Act, the European Regulation on Artificial Intelligence, (European Parliament, 2024), and the Guidelines for the introduction of Artificial Intelligence in Educational Institutions (MIM, 2025), published by the Ministry of Education and Merit, in August 2025, warn of the possible risks caused by AI with respect to our health, individual and collective safety and the protection of fundamental rights. In both documents, reference is made to the biases, biases and biases that can occur «when AI integrates discriminatory attitudes towards one or more groups of people into its algorithms, in particular related to sex, race, religion, political opinions or particular personal and social conditions» (MIM, 2025, p. 10). In childhood, biases represent a truly harmful risk: they are not just «errors of thought», but treacherous barriers to development. When a child grows up in prejudice, it crystallizes into mental patterns that condition his identity and his way of interacting with the world. AI trained on biased data can amplify stereotypes of gender, ethnicity, and socioeconomic status; The scenario becomes even more catastrophic when it is the algorithm itself that generates distorted and potentially harmful and dangerous outputs. The risks for children are even higher than for adults: in fact, in The Society of Transparency, the Korean philosopher Byung-Chul Han states that «everyone voluntarily surrenders himself to the panoptic gaze. One intentionally collaborates with the digital panoptic, revealing and exposing oneself» (Han 2014, p. 83). Bias thus becomes amplified discrimination due to distorted datasets that allow AI to produce social injustices (Floridi, 2022; 2025). It is necessary to train educators and teachers so that they recognize all possible algorithmic biases: from gender bias to cultural biases, from linguistic biases to representation biases, from historical-geographical bias (Chen, 2023), which undermine the principle of justice, causing ethical, moral, social and economic damage. AI is not a neutral tool, as it reflects the values of those who programmed it and gives visibility to the social stereotypes that affect the minds and imagination of minors. Ethical guidelines for educators on using artificial intelligence (European Commission, 2025) states how necessary it is for educators and teachers to know how to implement ethical educational-didactic design, which using inclusive datasets activate digital critical thinking education from early childhood, with the awareness that AI must be a device at the service of learning and not a tool of discrimination (Annacontini, 2023). From an educational-didactic perspective, it is necessary to train educators and teachers in agency; learner-teacher interaction; digital literacy and responsibility and trust (Panciroli & Rivoltella, 2023, pp. 84-87), because Artificial Intelligence can be positive for the educational process and can bring about an improvement «as long as the purposes are clear and the data collections transparent» (Redaelli, 2025, p. 69). The essay aims to demonstrate how through a series of educational strategies (Lorenzoni, 2025) and debiasing techniques (such as debate, evidence-based learning, metacognitive reflection) the impact of biases is reduced, and the mind is trained to critical, reflective, inclusive thinking that is less subject to preconceived judgments.

INDICATORS OF PEACE EDUCATION IN PRIMARY SCHOOL: A SYSTEMATIC LITERATURE REVIEW

Alessandra Priore (Università degli Studi Mediterranea di Reggio Calabria) · **Federica De Marco** (Università di Roma "La Sapienza", Italy; Università degli Studi Mediterranea di Reggio Calabria)

peace education | digital citizenship | systematic review

The transformations brought about by the digitalization of social and communicative environments require a reconsideration of the conditions that make democratic citizenship possible from early childhood. Within an ecosystem characterized by platform-mediated interactions, early public exposure, and dynamics of polarization, civic education cannot be confined to the acquisition of technical-digital skills; rather, it demands the development of critical, reflective, and relational dispositions capable of orienting action in both online and offline contexts (Biesta, 2020). In continuity with the pragmatist tradition, democracy may be understood as a situated practice of communication and cooperation (Dewey, 1916); accordingly, the school represents a crucial context for the experiential learning of such practices and for the construction of a peace-oriented society. Within the field of peace studies, conflict assumes a formative rather than pathological value. Galtung's (2014) reflection allows it to be interpreted not as an event to be eliminated, but as a relational process to be transformed through dialogical and creative modalities capable of overcoming oppositional rigidities and opening pathways toward shared solutions. This perspective is particularly relevant in contemporary contexts, where interactions, also digitally mediated, expose children at an early age to dynamics of confrontation, disagreement, and symbolic negotiation. Within this framework, peace education, conceived in transformative terms, does not merely address the management of problematic behaviors; rather, it promotes the capacity to interpret conflict as an opportunity for relational learning, fostering processes of mutual recognition and co-construction of meaning. In this discourse, the construct of moral agency assumes a central role, as it clarifies how learning processes may shape self-regulation within social relationships. When such processes are supported in educational settings structured around dialogue and cooperation (Lipman, 2003; 2005), they contribute to consolidating a situated sense of responsibility that extends to digital interactions. Interpreted through an ecological perspective on agency (Biesta & Tedder, 2007), the school can become a context in which experiences of confrontation discussed, argued, and critically re-elaborated prepare children to inhabit public spaces, including online environments, as arenas of conscious participation. Building on these theoretical premises, the article presents a systematic literature review conducted according to the PICOS framework and supported by the Rayyan software, with the aim of identifying and analyzing the key variables, influencing factors, effectiveness indicators, and best practices associated with peace education pathways. This methodological choice is grounded in the need to ensure rigor, transparency, and traceability in the process of study selection and analysis, in line with methodological guidelines for systematic reviews in the field of education (Ghirotto, 2020). The analysis of empirical studies retrieved from international databases (ERIC, Scopus, Web of Science, PsycINFO) highlights convergence around interconnected dimensions that configure peace education as a pedagogical infrastructure of citizenship. By fostering reflective and relational competences from an early age, these practices help orient digital experience toward participatory and responsible modalities, promoting subjectivities capable of inhabiting the public sphere as a space of dialogue, responsibility, and co-construction of the common good.

COMPETENCES, BILDUNG EDUCATION AND EVOLUTION: HOW CAN HUMANS ADAPT TO A CHANGING DIGITAL HABITAT?

Alessia Marabini (Fondazione Francis Bacon, Italy)

Human Evolution and Adaptation | IA | Bildung Oriented Critical-Ethical Sensitivity

The paper addresses the role of education in an increasingly digital and neoliberal market-oriented society, questioning how to adapt without losing human authenticity. The evolution that has accompanied humanity for millions of years seems to have almost come to a halt with the advent of AI and digital technologies. Humanity feels a sense of misalignment. One question becomes which modalities can be adopted by the human race to make up for this supposed "delay". The problem arises in particular if AI algorithms are designed to identify quantitative efficiency standards. In this case, efficiency parameters, for example in the world of work, would be calculated abstractly by the algorithms, forcing workers to adapt without taking into account the prerogatives of the human race, which are humans' assessment and physical and psychological limitations (De Caro). One question here arises regarding the pace and nature of evolution and adaptation of the human beings to their changing habitat. According to Stiegler - and drawing from Graham Wallas who faced the issue of the substantial impact of the Great Industrial Revolution on human society in Nineteenth century- it is possible to identify two different forms of adaptation (Stiegler). In the passive sense, adaptation requires modifying the predispositions of our species "from above." The idea is that the human species can adapt, without too much resistance, to the new demands of a changing society and its indisputable predetermined traits and ends. In our contemporary society that means adapting to the values of the market-oriented neoliberal society. Differently, in the active sense, the solution – without neglecting innovations in AI technologies- lies in modifying this environment itself to make it more suited to the prerogatives of our human species. In light of these considerations, the two most widespread educational models today—Competences-based learning and Bildung education—are compared. I contend that the former, in its most prominent form could translate in a passive adaptation to the standards imposed by a western market- oriented society, that is, the predetermined and never questioned "values" of competition, efficiency, and agonistic attitudes. On the contrary the latter, which is the cultural education rooted in the human being, is presenting itself as a decisive element in preventing the dispersion of humanity (Marabini; Moretti Marabini). Bildung is education as a process through which individuals work out their escape from the dependent relationships in which they initially find themselves and can make their social relationships their own, also allowing to critically question values underlying our society (Jaeggi). It occurs through a guided cultural transmission of content, which fosters the development of a critical and ethical sensitivity of a humanistic nature. Therefore, I contend that an education inspired by Bildung, without denying the possibility of also developing competences and skills in parallel, can constitute a better model for human emancipation and adaptation. It is in this sense that education truly becomes a formative and critical process in the active sense of adaptation.

DIGITAL TECHNOLOGIES AND SOCIAL ROBOTS IN HERITAGE EDUCATION: DEVELOPMENT OF A RESEARCH PROTOCOL

Marta Pirro (Università degli studi di Napoli Federico II, Italy)

Digital Tecnhologies | Social Robot | Heritage Education

At the heart of the school experience lies the relationship between teaching and learning, which responds to students' spontaneous need to explore, interpret, and understand the world around them. It is configured as a dynamic and participatory process that goes beyond the mere transmission of content, moving instead toward the active construction of

meaning through experience and the conscious use of tools, including digital ones. The progressive digitization of everyday environments has transformed patterns of social interaction and knowledge construction, involving children at increasingly early ages. In Italy, approximately one in three children between the ages of 6 and 10 (32.6%) uses a smartphone daily (ISTAT; Save the Children, 2023), prompting reflection on the educational responsibilities connected to technological mediation and the need to support children in developing critical and informed competencies. School remains one of the primary contexts in which students can acquire the essential skills required to participate fully in digital society (Vannini & McCleary, 2020). As highlighted in the National Digital School Plan, the challenge is to create the conditions for a learning process oriented toward cultural innovation and the enhancement of digital technologies, recognized as an "enabling tool, connector and driver of change" (MIUR, 2015). From this perspective, schools are called upon to configure themselves as spaces of "pedagogical connectivity" (Rivoltella, 2020), where technologies function as bridges among different actors and contribute to fostering a sense of belonging and shared participation. Educational robotics in kindergarten and primary school assumes particular relevance. Its theoretical foundation is rooted in Papert's constructionism, which emphasizes learning through making, in line with Dewey's concept of learning by doing, valuing active experience and participation in knowledge construction processes. International literature highlights the potential of educational robotics in supporting disciplinary learning, fostering the development of competencies, social skills, and enhancing complex cognitive functions such as problem-solving and reasoning. In this perspective, the experimental protocol promoted by the Observatory on Governance for Education to Cultural, Artistic and Landscape Heritage (OGEP3) of the Department of Humanities at the University of Naples Federico II involves the design of educational laboratories integrating social robots, zSpace technology, virtual reality viewers, cross-platform augmented reality applications, and holographic fans within arts-based learning pathways aimed at promoting education in cultural heritage and the languages of art. The experimentation is structured as a study investigating the impact of integrating these devices on collaborative learning processes, levels of student engagement, and the development of cognitive and transversal skills. In line with international guidelines recognizing technological innovation as an opportunity to enhance the quality and equity of educational systems (UNESCO, 2023), the challenge is not merely to provide access to technological tools, but to build the organizational and cultural prerequisites that enable teachers to integrate them consciously into their teaching practices. The goal is to transform these tools into meaningful and sustainable learning opportunities, avoiding purely technical or reductive approaches. Considering technologies as cognitive artifacts (Papert, 1980) within critical and contextually situated pedagogies makes it possible to promote an inclusive and participatory learning ecosystem.

Democratic Access to Scientific Knowledge through Graphic Reasoning and Visuo-Quantitative Literacy

PANEL CONVENORS: Berta Martini (Università degli Studi di Urbino); Agnese Addone (Institute for Globally Distributed Open Research and Education (Igdore)); Bruno Calza (Università degli studi di Macerata); Monica Tombolato (Università degli Studi di Urbino); Giampiero Dalai (Alpaca Società Cooperativa); Beatrice Scanferla (Università degli Studi di Urbino); Tommaso Guariento (Università Ca' Foscari Venezia); Luciano Perondi (Università Iuav di Venezia, Italy)

PANEL KEYWORDS: Education, Democracy, Scientific Knowledge

This panel examines how graphic reasoning and graphicacy can serve as democratic gateways to scientific knowledge, challenging teaching models that use spatial and visual-quantitative representations as technical procedures rather than epistemic tools for understanding. International assessments such as the OECD PISA Science Framework underscore the role of interpreting data, models, and graphical representations in scientific literacy. Yet these competencies remain unevenly distributed, reflecting persistent socio-economic, gender, and cultural disparities. Scientific education still relies on hierarchical education models that disadvantage learners without early experience with spatial thinking, proportional reasoning, or standard visual tools like the Cartesian reference frame. These cognitive resources are essential for understanding scientific models, critically engaging with data, and participating in public debate on technological and environmental issues. The panel invites contributions on how graphic representations—graphs, coordinate systems, spatial diagrams—operate not only as notational devices but as epistemic tools that foster argumentation, reveal relations, and support inclusive sense-making. Drawing on pedagogy, cognitive science, mathematics education, and visual culture, the panel seeks to outline a framework for democratic science education in which visuo-quantitative literacy becomes a shared civic competence. The goal is to reposition graphical tools as media of emancipation that cultivate critical thinking, social responsibility, and active citizenship. The panel focuses on the cognitive and neurovisual foundations of spatial and proportional reasoning, how they develop through pedagogical practices grounded in exploration and participation. Particular attention is given to the ethical and socio-political dimensions of scientific graphics, enabling equitable access for learners, including women historically underrepresented in STEM education.

VISUAL ORGANIZATION AND COGNITIVE LOAD IN DIGITAL MATHEMATICS INSTRUCTION: AN EXPERIMENTAL STUDY IN LOWER SECONDARY SCHOOL

Maddalena Galas (Università Iuav di Venezia, Italy) · **Bruno Calza** (Università degli studi di Macerata) · **Luciano Perondi** (Università Iuav di Venezia, Italy)

Cognitive Load Theory | Multimedia learning | Cartesian plane

This study investigates the role of visual organization in digital instructional materials within lower secondary education, focusing on its impact on comprehension, immediate and delayed retention, and perceived cognitive load. The research is grounded in Cognitive Load Theory (Sweller, 2010), Multimedia Learning theory (Mayer, 2002), and studies on graphicacy, assuming that spatial and hierarchical arrangement of visual elements may facilitate or hinder the integration of verbal and spatial representations. The study examines whether specific design choices—namely text–image proximity and explicit visual hierarchy—affect cognitive processes involved in learning an introductory mathematical concept: the Cartesian plane. A between-group experimental design was implemented with a sample of 52 students (age range: 11–12 years) from three first-year lower secondary classes. Each class attended a lesson on Cartesian axes delivered through one of three graphic templates derived from the combination of two independent variables: (a) text–image proximity and (b) presence of explicit visual hierarchy. Instructional content, teaching time, and delivery mode were held constant across conditions. Dependent variables included prior knowledge (baseline test), immediate retention, comprehension, perceived cognitive load, and delayed retention one week later. Cognitive load was measured using a questionnaire based on the validated scale developed by Klepsch, Schmitz, and Seufert (2017), allowing differentiation among intrinsic, extraneous, and germane load components. Results show statistically significant differences between experimental conditions only in the disaggregated analysis of cognitive load components. In particular, extraneous cognitive load varied systematically across templates, indicating that graphic design primarily influences cognitive processing rather than final performance outcomes. No statistically significant differences emerged in comprehension or retention tests. The findings show that visual organization significantly affects extraneous cognitive load, even when measurable differences in learning outcomes do not emerge. While recent systematic reviews have questioned whether the spatial contiguity effect

can be explained by reductions in extraneous load (Schroeder & Cenkci, 2020), the present study suggests a more articulated relationship between instructional design, cognitive load, and performance. Variations in extraneous load did not translate into immediate learning gains, yet they reconfigured the cognitive conditions under which spatial-quantitative reasoning unfolded. This dissociation indicates that additional variables intervene in the construction of knowledge and, in line with representational models emphasizing the coordination of depictive and descriptive processing (Schnotz & Kürschner, 2007), points to a relationship between cognitive load and learning outcomes that is neither linear nor unidirectional. Current models linking instructional design, cognitive load, and performance may therefore oversimplify the dynamics of visuo-quantitative learning. By showing that the arrangement of text and visual elements influences cognitive processing in the introduction of the Cartesian plane, the study contributes to the discussion on graphicacy as a foundational component of scientific literacy. In this perspective, the design of graphical materials becomes an epistemic and pedagogical issue: reducing unnecessary cognitive burden may support more equitable participation in visuo-quantitative practices central to mathematics and science education. The study therefore positions visual design as a potential mediator of inclusive access to scientific representations, contributing to the broader framework of democratic science education.

HOW CAN MATHEMATICS EDUCATION HELP WITH THE PROBLEM OF SOCIAL INJUSTICE

Karolina Tytko (FCIPS WA, |Krakow Poland)

Visual representations | critical thinking | inclusiveness

Mathematical knowledge is often associated with a certain dogmatic nature, detached from the world of human meanings and everyday contexts. This can result in a situation where a teacher presents mathematical theory in isolation from the individual needs and cognitive processes of individual students or groups (Zhou 2022). The philosophy of mathematical practice perspective adopted in our research (Löwe and Müller 2010; Giardino 2018; Carter 2019; Van Kerkhove 2009) does not confer on mathematics the status of exceptional knowledge. Mathematics can be perceived not only as an abstract discipline, but also as a profoundly social phenomenon, as a construct born of interpersonal interactions, a language and tool embedded in social practices. One of the important aspects of this approach is research on the epistemology of visual thinking in cognition, reasoning, and even mathematical proof. In (Tytko et al. 2023) mathematical practice is described from a psychological and social perspective. There is introduced the notion of Critical Concept Kinds. This notion is strongly related to the presence of visual representations in cognitive processes. In this presentation, we will focus on a deeper analysis of the proposal of fostering Critical Concept Kinds in math and mathematical education (based on Critical Math Kinds defined by Mangraviti 2024, and Critical Gender Kinds defined by Dembroff 2019). Df.: „a critical concept kind is a way of working with a concept which destabilizes mainstream ways of working with the “same” concept. Critical individual mental practices are those practices that generate critical concept kinds” (Tytko et al. 2023). This proposal highlights the gap between the idealistic understanding of mathematical language and the process of creating, applying and learning mathematics, with particular emphasis on the processes and conditions that influence these processes. Especially multimodal aspects. Since the mental mechanisms and relationships observed in mathematical and math education practices can also be observed in other types of human practices, because of their psycho-experiental background, mathematics can also be a tool – especially in the educational context – for analyzing and shaping society. It is fit to the need in the education model, for changing an absolutist epistemology to one based on critical thinking skills and team/project collaboration (Anna Nitecka-Walerych, 2021). There are two advantages to this: 1. More effective

problem-solving at a technical level, based on practice, knowledge, and skills. 2. Contribution to a more inclusive (less harmful) society – complementing Bettcher's (2014) proposal regarding the existence of multiple worlds of meaning, in which certain concepts have different meanings. Bettcher's proposal primarily concerns practices that ultimately lead to a change in the meaning of concepts. Our proposal begins by fostering awareness and the need for critical thinking about mathematical concepts, aiming to foster the ability to reconsider dominant concept kinds in the social space, which may be harmful.

GRAPHIC NEUTRALIZATION AS A TOOL FOR DEMOCRATIC ACCESS TO STEM KNOWLEDGE: EMPIRICAL EVIDENCE AND IMPLICATIONS FOR EARLY CHILDHOOD MATERIALS

Laura Sisti (Istituto Tecnico Tecnologico Paritario "Abate Zanetti" indirizzo Grafica e Comunicazione, Murano (VE), Italy)

Gender stereotypes | STEM education | graphic neutralization

The gender gap in STEM disciplines is rooted in childhood, through the channels of visual culture. Gender stereotypes emerge as early as age 2 (Serbin et al., 2001) and by age 5 are consolidated into associations that children apply to themselves and others (Martin & Ruble, 2004). During this period of maximum brain plasticity (Santrock & Rolle, 2017), images are the primary means through which children construct their understanding of the world (Tizard & Hughes, 2002), conveying meanings without the need for verbal mediation (Berger, 2008; Gibson, 2004). When illustrations connote the scientific imaginary as masculine, they construct barriers (Biemmi, 2017) that girls internalize as limits, with documented effects on self-efficacy and future aspirations (Lopez, 2012), contributing to educational segregation (Bian et al., 2017) and the underrepresentation of women in the most remunerative sectors of the economy (Marone & Buccini, 2022). Data integrating INVALSI assessments and university enrolment records confirm that girls, despite showing high levels of competence, are less likely to enrol in STEM programs. The divergence in choices is therefore not explained by differences in academic performance (Falzetti, 2024). Empirical evidence from an experimental study supports this position [blinded for review]. The study involved 82 children aged 4–5 years (M = 41, F = 41; mean age = 4.73 years), exposed to graphically neutralized illustrations — through the elimination of gender markers such as clothing, hairstyles, and sexual traits; the reduction of paedomorphic features (Araujo et al., 2022; Karniol, 2011); and the adoption of a neutral colour palette through the desaturation of gender-attributable colours. Results show statistically significant differences such as reduced stereotype conformity ($U = 234$, $p < .001$), lower automatic recognition of activities as gender-associated ($U = 292$, $p < .001$), and greater hesitation in choice ($U = 461$, $p < .001$). Furthermore, qualitative observations support these findings, showing greater hesitation and verbalization of uncertainty — signals of a shift from automatic to more deliberative categorization. These results provide empirical evidence that gender biases are culturally induced and modifiable through

visual design. This is relevant for STEM materials, as pathways toward these domains depend not only on performance, but on motivational variables such as self-efficacy and disciplinary identity, influenced by gender as early as preschool age (Hart & Ganley, 2019; Vincent-Ruz et al., 2018). If graphic neutralization suspends stereotype-driven automatisms, STEM materials designed with visual neutrality criteria can represent a concrete intervention. The criteria were applied to the redesign of two STEM books for the preschool age group, demonstrating the transferability of the method to real editorial contexts. Systematically adopting these criteria — by publishers, illustrators, and institutions — means intervening on one of the earliest mechanisms through which gender inequalities are reproduced. Visual representations mediate identity construction from early childhood, shaping attitudes toward scientific knowledge. Rethinking the visual design of STEM materials as an epistemic and political act is a necessary condition for a democratic scientific education, in which knowledge becomes a shared civic competence, accessible to all regardless of gender.

BEYOND GRAPHICACY: TOWARD A FRAMEWORK OF GRAPHIC DESIGN EQUITY IN STEM EDUCATION

Bruno Calza (University of Macerata, Macerata, Italy) · **Agnese Addone** (Institute for Globally Distributed Open Research and Education (IGDORE), Roma, Italy)

Graphic Design Equity | inclusive design | educational equity

Visual representations in educational materials are not neutral tools: they organize, hierarchize, and filter knowledge through choices of typography, color, iconography, and layout that are simultaneously cognitive, cultural, and political decisions. Yet the literature on visual design in education has focused predominantly on two dimensions — graphicacy, understood as the reader's competence in interpreting visual signs (Balchin & Coleman, 1965; Friel et al., 2001), and inclusive design, oriented toward reducing perceptual barriers (CAST, 2024; Rose & Meyer, 2002) — without systematically addressing the dimension of epistemic justice in representation. This contribution introduces the theoretical and operational framework of Graphic Design Equity (GDE), which analyzes visual design choices in terms of the equitable distribution of the conditions for understanding a graphic artifact and the reader's ability to recognize themselves in that representation. The term "graphic" is used in its semiotic sense: it refers to any visual representation choice that mediates access to knowledge, regardless of the production context. GDE does not replace existing concepts but radicalizes them toward a third level not yet formally articulated: beyond perceptual accessibility and cognitive usability, toward epistemic and symbolic justice — that is, whether everyone can understand and recognize themselves in what is made visible. The

framework is structured around three interconnected dimensions: a design dimension, concerning technical choices of typography, color, layout, and visual hierarchy; a social dimension, addressing the symbolic and cultural inclusion or exclusion of identities and perspectives; and an educational-scientific dimension, aimed at educating teachers and designers as ethical agents of representation. Studies on the gender gap in STEM show that differences in spatial reasoning emerge and grow with age rather than being present from birth (Lauer et al., 2019), and that women with cognitive profiles comparable to men's remain underrepresented in STEM fields, suggesting the role of social and structural barriers rather than cognitive ones (Sokolowski et al., 2026). The analysis of 1,255 textbooks across 34 countries documented the pervasiveness of visual bias in school materials (Crawfurd et al., 2024), while experimental research has demonstrated that counter-stereotypical images significantly improve female students' performance in scientific domains (Good et al., 2010). D'Ignazio and Klein (2020) have shown how every visualization embeds a perspective and a hierarchy of values that structure the possibilities of recognition available to the learning subject. GDE is proposed as an analytical tool to evaluate existing materials, a design framework to produce more equitable visualizations, and an ethical and educational device for the training of designers. In alignment with Goal 4 of the United Nations 2030 Agenda (2015), which aims to ensure inclusive and equitable quality education, GDE intervenes at the graphic level as a semiotic infrastructure that shapes access to understanding, translating the principles of educational equity into operational design criteria.

FLOWCHARTS AS VISUO-OPERATIONAL TOOLS FOR ALGORITHM THINKING DEVELOPMENT

Giuseppe Romagno (Università Iuav di Venezia, Italy)

Graphicacy | Flowchart | Algorithmic Thinking

The proposed study articulates between two major issues in current educational discourse. On the one hand it is the growing interest in Computational Thinking (CT) defined as "solving problems, designing systems and understanding of human behavior, using the fundamental concepts of computer science" (Wing, 2006). In particular, this study will focus on the CT subcomponent related to algorithms production and usage and its cross-disciplinary relevance into the educational domain (Popat & Starkey, 2019). On the other hand this study relates to "Graphicacy", namely the ability to produce and interpret graphics, as an underpinning skill for every educational background (Balchin & Coleman, 1966). The relevance of both issues is confirmed by the attention paid by the internationally applied frameworks for K-12 computer science education (Association for Computing Machinery et al., 2016) and science education assessment (OECD, 2023). This study will focus on algorithms defined as a finite number of steps to solve a problem (Louridas, 2020), their forms of representation (Merrill, 1980) and the flowchart in particular. A narrative review of comparative studies will be included to assess the learning advantage granted by the algorithm's different forms of representation: flowchart, pseudocode, linear text, block-based tools (Giordano & Maiorana, 2015; Scanlan, 1989; Xinogalos, 2013). This study will later review the evidence provided by recent neuroimaging studies in perception of the cartesian graphical space (Ciccione et al., 2023; Ciccione & Dehaene, 2026). The involvement of the visual system's dorsal stream, known as the "how" pathway, and devoted to self spatial positioning and distance perception for purpose-oriented interactions is particularly relevant for

this study, as well as the demonstrated long established graphicacy of the cartesian diagram (Perondi et al., 2025). Calza & Perondi (2025) found that Reference Frame Systems have positive impact on understanding process compared to Rules of Composition System, e.g. flowchart. It could be hypothesized that a well established graphicacy of flowchart diagrams, leveraging on the discrete nature of the flowchart's blocks, their function-based shape, their visuo-functional connection, may lead the flowchart to be reframed from mere rappresentative form and learning aid to operational device of epistemic relevance (De Toffoli, 2025) which activates "manipulative imagination" (De Toffoli & Giardino, 2014).

COMPARING HUMAN AND ARTIFICIAL SCIENTIFIC IMAGES FOR LEARNING ENHANCEMENT

Flavia Politi (Université de Liège; Università di Bologna) · **Jeanne Marlot** (Université de Liège) · **Maria Giulia Dondero** (F.R.S.- FNRS; Université de Liège)

Scientific images | Visual learning | Text-to-Image Systems

In this contribution, we develop a two-level discourse on scientific images. In the first part, we focus on scientific images produced through human gestures. As Dondero (2015; see also 2024) argues, the scientific image has a Peircean diagrammatic function: it increases knowledge through the manipulations and experiments performed on it. We show how this function unfolds in a specific way of "reading images" based on two main features: the nonlinearity of reading and the dependencies between the whole and its parts (Bordron 1991; Goodman 1977). In this sense, the visual interpretation of images cannot be considered a mere duplication of accessing verbal texts. We then argue that the meaning of the image must be understood through two levels of value circulation (Paolucci 2010). The first is the level of textual immanence, which allows us to conceive of the image as a signifying totality and to analyse its internal relationships and connections according to categories selected for the purposes of analysis: the topological, chromatic, and eidetic categories of Plastic Semiotics (Greimas 1984), as well as the texture as enunciative apparatus (Dondero 2020). The second is the level at which this value is exchanged with what lies outside the image-text. In the specific case of the scientific image, we often encounter a meta-textual foreground, in which the representation of an object, a method, or a scientific process is placed within another text belonging to a different semiotic system, such as verbal language. These interpretative circumstances require a work of translation that we define as intersemiotic translation (Jakobson 1959, D'Armenio et al. 2025; Dondero

& Fontanille 2012; Eco 2012; Dusi 2000). A further external factor concerns the comparison between the value produced by the image and the knowledge brought by the observer's competences regarding the represented phenomenon, as well as the relationship between that phenomenon and its terminus a quo (Eco 1997), which activates the semiosis of the graphic representation under examination. In the second part, we compare scientific images produced through conventional scientific practices with scientific images generated by text-to-image systems (e.g., Midjourney). First, we consider the relevance of the connections among the data on which these systems depend. In the automatic analysis of large corpora, such connections can assume different configurations of meaning depending on the neural architectures and algorithms used to explore the datasets. Second, we examine how these different ways of identifying relations among data (attention mechanisms, cosine similarity, segmentation, and other procedures) have a substantial impact on the rendering of the scientific image. In the context of scientific images for didactic purposes, the generation of synthetic images appears particularly useful for producing tailor-made educational resources and for personalising content. Our analysis therefore aims to define a perimeter of usability for artificial scientific images within educational practices (Mayer 2020). We showcase a corpus of scientific images drawn both from instructional materials and from multimodal generative AI systems, organised into three categories: objects (e.g. the cell), methods (e.g. how to use the microscope), and processes (e.g. the water cycle).

ARTICULATING NARRATIVE PROBLEMS IN AAC: LOGICAL–MATHEMATICAL REPRESENTATION IN WORD PROBLEMS AND STORY PROBLEMS THROUGH SYMBOLS AND SPATIAL RELATIONS

Beatrice Scanferla (Università degli Studi di Urbino Carlo Bo, Urbino, Italy; Alpaca Società Cooperativa, Ferrara, Italy) · **Berta Martini** (Università degli Studi di Urbino Carlo Bo, Urbino, Italy) · **Giampiero Dalai** (Alpaca Società Cooperativa, Ferrara, Italy) · **Agnese Addone** (Institute for Globally Distributed Open Research and Education (IGDORE), Gothenburg, Sweden)

Augmentative and Alternative Communication (AAC) | Word Problems | Mathematics conceptual representation

One major obstacle to the application of mathematical problem-solving strategies is the lack of an adequate mental representation of the problem. Children often struggle to imagine the domain of objects and transformations described in a problem situation and instead attempt to infer the required mathematical operation directly from the verbal formulation of the problem text (Nesher, 1980). Cognitive psychology emphasizes the distinction between two phases in problem solving: representation (problem comprehension) and solution. This distinction suggests that many difficulties in mathematical problem solving may originate from an inadequate representation of the problem (Mayer, 1982). Literature in mathematics education describes that visual and symbolic representations—e.g. number lines, coordinate systems, diagrams—play a crucial role in supporting students' understanding of mathematical concepts, across different stages of education and cognitive profiles (Duval, 2017; Robotti et al., 2016; Hawes, 2020). Mathematical problems expressed in textual form—defined as word problems or story problems—play a central role in primary mathematics education. They are a form of didactic transposition which supports students' understanding of quantities and transformations of quantities by embedding them into a narrative context (Zan, 2016; Verschaffel & De Corte, 1997). This pedagogical practice has been

widely studied in mathematics education (Zan, 2011; Hickendorff et al., 2021; Fuchs et al., 2015; Kintsch, 1985) and represents a favourable domain for investigating numerical and computational reasoning in primary school children as well as in individuals with cognitive disabilities. Solving such problems typically requires the integration of linguistic comprehension, working memory and reasoning abilities (Hickendorff et al., 2021; Fuchs et al., 2015). Literature on Augmentative and Alternative Communication (AAC) pays considerable attention on how the iconic nature of signs supports everyday communication and language comprehension (Drager et al., 2010; Beukelman et al., 2020). By contrast, limited attention has been paid to the composition and spatial articulation of symbol systems for representing logical or mathematical relations. Symbol systems can be understood as epistemic tools that organize logical relationships between concepts from visual and spatial perspective (Meletis, 2025; Duval, 2017; Roth & Tobin, 1997). Visualizing such relationships may help learners avoid superficial problem solving strategies, such as performing arithmetic operations without verifying the plausibility of the result within the real-world context of the problem (Carotenuto et al., 2021). This article presents examples of story problems represented through AAC symbols arranged on communication boards that spatially articulate mathematical relations involving quantities and quantitative changes. The aim is to verify whether representing the logical-mathematical structure of a problem facilitates the understanding of quantities and basic operations. These symbol configurations may serve as a starting point for future empirical research on the teaching of mathematical concepts through AAC, where the meaning of the operation emerges from the interdependence between graphic signs and the visual space of the operation, rather than from isolated symbols. More broadly, this perspective invites reconsidering AAC not only as a communication aid but also as a pedagogical tool for accessing mathematical knowledge, promoting personal autonomy particularly for learners with cognitive disabilities or visual-perceptual cognitive styles (Mottron, 2006; Soulières, 2009).

SCIENCE EDUCATION FOR DEMOCRACY: UNVEILING EPISTEMOLOGICAL AND LEARNING CONSTRAINTS TO ENHANCE THE DIDACTIC EFFICACY OF SCIENTIFIC VISUAL REPRESENTATIONS

Monica Tombolato (University of Urbino Carlo Bo, Italy) · **Giampiero Dalai** (University of Urbino Carlo Bo, Italy)

Visual models | Scientific representation | Science education

In today's society, which is inundated with information primarily conveyed visually, the ability to interpret graphical representations and images critically is essential for active and responsible citizenship. Teachers at all levels must, therefore, undertake the crucial challenge of developing this skill in their students by making instructional choices aimed at deconstructing clichés — such as the idea that "a picture is worth a thousand words" — and protecting students from the "tyranny of numbers," which are often presented as objective and indisputable data (Cairo, 2019; Weikmann & Lecheler, 2023; OECD, 2023). To take a step forward in this direction, this article examines the role of visual models (such as graphs, diagrams, and simulations) in physics education, drawing on Roth and Tobin's (1997) findings regarding the difficulties students face in connecting observed phenomena to their mathematical formalisations. The two scholars argue that standard physics lessons involve multiple translations of an observed phenomenon into ontologically distinct representations, which teachers—having been enculturated into the scientific community—often treat as self-evident. For instance, a rolling ball may be represented by an experimental reconstruction, a table showing its positions at specific moments in time, a graph of the curve, or the equation of uniformly accelerated motion. However, their research—along with the misconceptions that emerged during lectures aimed at future primary school teachers regarding classic physics topics such as motion along an inclined plane, the oscillation of a pendulum, and the principle of inertia (Tombolato, 2020)—shows that these representations often remain a "black box" for most students (e.g., Shah & Hoeffner, 2002). Against this backdrop, the aim of this study is to clarify the epistemological and learning constraints that must be satisfied for visual models to be used effectively in education, so that they can serve as mediators of knowledge (Bruner, 1974; Damiano, 2013; Kress, 2009) and help students reconcile their perceptual experience of the world with its scientific representation. Drawing on Ronald Giere's (2010, 2013) intentional conception of representation, we argue that whether a physics novice can correctly decode the information associated with a visual model, draw inferences about its target system (e.g., the observed phenomenon), and connect it to mathematical formulas does not depend exclusively on the model's intrinsic visual characteristics. Rather, it depends on understanding the modeller's epistemic intentions, which are concretely realised through epistemic operations—such as abstraction and idealisation (Portides, 2007, 2021)—that require a proficiency in thinking in terms of variables (Arcà & Guidoni, 1987). The work is divided into two parts. In the first part, after introducing the perspectival nature of scientific representation (Giere, 2010), we will classify visual models based on their underlying epistemic operations to account for the varying cognitive load (Sweller, 2023) associated with processing them. In the second part, we will provide teachers with guidance on combining different types of visual representation to optimise the management of the cognitive load associated with complex tasks such as the mathematisation of nature.

Democratic Education and Critical Thinking: Innovative Practices in School

PANEL CONVENORS: Tatiana Arrigoni (Iprase, Italy); Chiara Tamanini (Iprase, Italy)

PANEL KEYWORDS: Keywords: school innovation, teaching-learning-assesment practices for democracy, critical thinking

It is now widely acknowledged that educational systems play a crucial role in preparing young people to become active, responsible, and engaged citizens in democratic societies (see European Commission JRC 2020). This role becomes even more significant in the current context, marked by a crisis in democratic concepts and practices and by onlife forms of existence shaped by artificial intelligence, which call for the development of a robust critical mindset (L. Floridi 2025). Within the educational field, innovative and dialogic teaching practices—characterised by a strong student-centred orientation and by the promotion of active, experiential, and collaborative learning to address complex issues—appear particularly effective in responding to the dual need to foster both democratic competence and critical thinking. This approach aligns with the Deweyan view that the school must, above all, constitute a learning environment both of and for democracy (J. Dewey 1916). Building on these considerations, and in line with topic b of Axis 8, we invite contributions that shed light on how schools are seeking to innovate their curricula to promote democratic competence through the adoption of ad hoc methodologies and assessment practices. We particularly welcome presentations of educational experiences aimed at cultivating thinking skills and attitudes by participation in processes of shared knowledge construction. Such practices enable pupils to experience cooperation and responsibility toward a common goal, while also helping them develop the confidence needed to reach well-grounded insights into the crucial challenges of our time and to contribute meaningfully to the strengthening of democratic society.

SABIR: A CODESIGN PROCESS TO FOSTER INQUIRY BASED-LEARNING IN THE MEDITERRANEAN

Stefano Sandrelli (INAF, Italy; IAU Office of Astronomy for Education Center Italy) · **Gloria Tirabassi** (INAF, Italy; IAU Office of Astronomy for Education Center Italy) · **Dunja Fabian** (University of Ljubljana, Slovenia) · **Hassane Darhmaoui** (School of Science and Engineering, Al Akhawayn University in Ifrane,Morocco) · **Aysegul Yelkenci** (Istanbul Kultur University, Turkey) · **Nayra Rodriguez Eugenio** (Instituto de Astrofísica de Canarias, Spain) · **Jean-Pierre Saghbini** (UniversCiel Liban, Lebanon) · **Zakaria Belhaj** (HPS Foundation, Morocco) · **Marc Bou Zeid** (UniversCiel Liban, Lebanon) · **Alejandra Goded Merino** (Instituto de Astrofísica de Canarias, Spain)

IBL | Education | co-design

Introduction Sabir is a project aimed at fostering critical learning in the Mediterranean by producing new IBL activities for high school students [1]. Sabir is addressed to the Mediterranean IAU NAEC community [2], and it involves six countries: Italy, Lebanon, Morocco, Slovenia, Spain and Turkey. The project is conducted through a co-design method in all its phases, based on past experiences [3]. In Sabir, the basic idea is to select some non-IBL activities and to transform them into IBL ones, through a collaborative process among peers [4]. In the scientific literature, there is an agreement about the essence of inquiry as “learning science as science is done” [5, 6]. Moreover, even if the efficacy of the IBL methods is largely accepted [7], there are major effects influencing its adoption in classrooms, such as the social environment, teachers’ training, and the cultural heritage [8]. We mainly wished to identify: a) the main challenges influencing the co-design of IBL activities (Q1); b) the extent of the efficacy of IBL activities in different contexts (Q2); c) the main factors influencing the efficacy of IBL in different contexts (Q3). Method Sabir was designed to be held both online and in-person. During the online meetings, we discussed the general meaning of IBL according to different situations and we rebuilt our own scheme of an IBL activity. The NAECs proposed some existing and tested activities to be developed as IBL co-designed activities, then we started to transform them into IBL ones: we discussed all together about the main idea, the link to the national curricula, how to engage the students in the scientific challenge, what inquiries the students could choose to conduct, what would be the necessary materials/software/real data to foster an interdisciplinary approach and so on. We repeated the process of presenting, discussing and proposing further developments. During the in-person phase, a 1-week long residency, the NAECs discussed the activities in pairs, with the help of a facilitator. The presenting NAEC collected the suggestions and implemented the activity before the following bi-lateral meeting. At the end of the week, all the NAECs were requested to write down the final version of the activity. Conclusion Our goal was to evaluate how efficient the process of transformation of an activity into an IBL one was and if it had an impact on the Mediterranean

community involved. We wished to understand how effective the inquiry is when the activities are proposed in different countries and which are the major challenges. A co-design process is not straightforward. It can be very slow, especially when happening online. On the other hand, the discussion in pairs that followed during the in-person residency was much more efficient, also facilitated by the fact that NAECs knew each other from collaborating together in past projects. This confirms that working on the community (and as a community) has a strong impact on the outcome of such a project. As a final product, we published the IBL transformed activities on the IAU education platform astroEDU [9].

FROM DIVERSITY TO DEMOCRATIC COMPETENCE: TEACHING FOR DEMOCRACY IN UNEQUAL SOCIETIES

Manuela Mendoza (Universidad de O'Higgins, Chile)

Egalitarian Attitudes | Inter-class Relationships | Social Inequality

Educational institutions are not only spaces for academic instruction but also critical arenas of socialisation where young people develop perceptions, attitudes, and beliefs about society. Among the many attitudes shaped during childhood and adolescence, views on socioeconomic inequality are of particular importance, as they may symbolically legitimise or challenge the existing social order and contribute to either the reproduction or the transformation of persistent social disparities. This paper draws on a three-year study in Chile that examines how schools shape students' attitudes towards socioeconomic inequality. Situated in one of the world's most unequal societies —where the top 1% of households capture 27% of national income— the project seeks to understand how students make sense of inequality and how schools can contribute to social cohesion. Building on sociological and educational research, the project advances two main premises. First, attitudes toward inequality are not only structured by class position but also by inter-class relationships. Encounters with peers from different social backgrounds can expand social comparisons, stimulate reflexivity, and undermine stereotypes (De Schaepmeester et al., 2021). Evidence from Chile and elsewhere suggests that socially diverse networks increase awareness of inequality, reduce belief in meritocracy, and foster support for redistribution (Otero & Mendoza, 2024). Second, schools constitute privileged micro public spaces (Amin, 2002) for such inter-class encounters. Compared to families or neighbourhoods, schools provide broader and sustained opportunities for interaction across class lines. In contexts of diversity, schools can foster citizenship attitudes such as empathy, solidarity, and tolerance, aligning with Allport's (1979) intergroup contact hypothesis. However, diversity does not automatically translate into egalitarian learning: it may also generate conflict, micro-aggressions, or internal segregation (Blalock, 1967; Garces & Jayakumar, 2014). Consequently, the project examines not only the structural composition of schools but also their pedagogical, organisational, and community practices that mediate inter-class relationships. Using a mixed-methods design, the research combines a national quantitative analysis of schools' internal socioeconomic diversity with ethnographic fieldwork in socioeconomically mixed schools. At the conference, preliminary findings will be presented, including: (a) ethnographic evidence on inter-class relationships among students; (b) the schools' responses to socioeconomic heterogeneity; and (c) the schools' pedagogical strategies to promote democratic competence and attitudes towards inequality. The findings aim to inform international debates on how diversifying schools can promote more egalitarian social attitudes. Ultimately, the project will provide critical evidence for public policy to promote schools that foster the development of egalitarian attitudes and potentially help reduce social inequalities.

THE "A SUON DI PAROLE" TOURNAMENT: EVALUATION OF A SUCCESS

Tatiana Arrigoni (IPRASE, Italy) · **Chiara Tamanini** (IPRASE, Italy)

debate | cognitive skills | socio-emotional skills

Since its introduction in Trentino in 2010, the debate tournament ‘A suon di parole’ has experienced exponential growth over 15 years. It now engages the majority of local higher secondary schools (as well as some institutes from neighbouring regions) and has involved approximately 17,000 students in Italian-language debates. This scenario expands further when considering participants in German and English competitions, and all students taking part in internal school qualification rounds. Two primary factors seems to be responsible for the success of the tournament: its adaptable debate format: developed ad hoc, it integrates into both curricular and trans-curricular teaching, proving particularly effective for civic and citizenship education. its being a student-centered "game": the core of the tournament's appeal is its focus on student agency. Participants actively research, verify information, and then demonstrate what they can do with their knowledge — testing their skills in and through the debate. Existing analysis already acknowledges the tournament's role in fostering teamwork, rational verbal dispute, critical thinking, and listening skills. This talk focuses on the most recent research project on ‘A Suon di Parole’, aimed at a systematic evaluation of the participants’ experience in the changing scenario of the last few years, marked by a widespread use of artificial intelligence and a growing crisis in democratic values and practices. Through a questionnaire distributed to a sample of students and teachers with repeated debate experience, aspects related to both argumentative and socio-emotional skills are explored in order to assess the tournament's impact on critical thinking and interpersonal competencies as perceived by teachers, tutors, and, especially, students. Moreover, by incorporating items from a 2016/2017 version, the questionnaire will track changes in perception over time, offering a valuable longitudinal perspective. The next phase of the research will involve a qualitative, in-depth analysis of distinguished practices and approaches adopted by individual classes and institutes. This will provide nuanced insights into the tournament participation, in its possible forms and results. This plan promises to add substantial empirical evidence to the understanding of participating in ‘A Suon di Parole’ as a powerful educational practice, documenting its evolving impact on students' cognitive and interpersonal development in rapidly changing times.

TEACHING SOCIAL STUDIES EDUCATION IN A WORLD ON FIRE: REFLEXIVE JOURNALING AS DEMOCRATIC METHOD WITH PRE-SERVICE TEACHERS

Kathy Whynot (University of New Brunswick, Canada) · **Melissa Keehn** (University of New Brunswick, Canada)

reflexive journaling | methodological innovation | teaching and learning in preservice education

Social studies education is increasingly tasked with helping young people, and those preparing to teach them, navigate complexity, uncertainty, and contested knowledge, while cultivating the dispositions necessary for democratic life (Cohen & Cohen, 2025; Hawkman, 2023; Rodriquez & Swalwell, 2023). In this context, we ask: What does it mean to teach elementary social studies education methods to preservice teachers in a moment marked by political polarization, intensifying global crises, and democratic erosion? How might reflexive journaling operate as a method for democratic learning within social studies education? Our paper draws on a collaboratively taught social studies methods course where reflexive journaling functioned as a central methodological practice for both instructors and pre-service teachers. Kathy is a PhD student, Contract Academic Instructor, and former middle school Social Studies teacher. Melissa is an assistant professor and former secondary history teacher. Together, we designed and co-taught the course to 70 pre-service teachers during the winter of 2026 at a mid-sized university in New Brunswick, Canada. Course content included Indigenous education, rights and responsibilities, decision-making, Black histories, place and space, protest and social movements, community, environmental stewardship, and geography. Grounded in Black feminist theories of knowledge that foreground lived experience and embodied learning (hooks, 2014; Lorde, 1978), our reflexive journaling emerged as a shared space for wondering, noticing, feeling, questioning, and meaning-making together around complex social studies issues. Feminist traditions of teaching and learning have long positioned journaling as a practice of critical self-reflection and relational knowing - one that values intimacy, connection, and communities. hooks (2013) captures this orientation when she notes that “we write because language is the way we keep a hold on life...We communicate to connect, to know community” (p. 22). This commitment to relational meaning-making and community directly informed how journaling functioned as a key method within our social studies methods course. Our collective journaling aligned with Ross’s (2024) assertion that social studies teaching and learning should support learners in developing personally meaningful understandings of the world and their capacity to act within it. The practice of journaling invited students to think with the course - tracing personal, emotional, and professional shifts as they encountered the pedagogical tensions of teaching social studies in polarized times. Students’ entries, alongside our own, engaged with discomfort, uncertainty, and contradiction, connecting course concepts to experiences, current events, media texts, and emerging identities as social studies educators. This paper draws on our instructor journals and a sampling of students’ journals, including visual artifacts and narrative writing, to examine how this method shaped our collective learning during a moment marked by global uncertainty and social upheaval. Our findings suggest that reflexive journaling emerged as a methodological anchor for making sense of social studies teaching and learning in a world on fire (see Morrowu, 2026; Khonina & Salway, 2025; Stefanovich, 2026). Functioning as a powerful form of methodological innovation, reflexive journaling empowered educator and student voice and centered relational accountability while fostering critical thinking and a shared sense of purpose and community.

FOSTERING DEMOCRATIC RESILIENCE THROUGH CIVIC EDUCATION: INSIGHTS FROM THE ROLE-PLAY "IN SEARCH OF THE LOST PAST"

Mattia Zeba (Institute for Minority Rights - Eurac Research, Italy)

roleplaying · radicalisation · extremism

In a context marked by democratic fatigue and political polarisation schools and educational actors face the urgent task of fostering democratic competence and critical thinking among young people. At the same time, debates surrounding radicalisation and deradicalisation highlight profound moral and pedagogical dilemmas: how can educational interventions strengthen resilience to extremist narratives without becoming forms of counter-indoctrination? How can educators intervene meaningfully while respecting freedom of thought and expression? This paper presents and reflects on In Search of the Lost Past, a civic education role-play designed to address dynamics of alienation and polarisation that may contribute to processes of radicalisation. Rather than focusing on deradicalisation as a corrective intervention after the fact, the tool adopts a preventive and educational perspective, aiming to cultivate democratic literacy, critical thinking, and pro-social resilience. Designed for use in schools, youth centres, and community settings, the role-play engages participants in structured simulations that require them to reflect on available choices and anticipate the consequences of different courses of action. Through co-participation and co-construction, participants explore contested conceptualisations of common values, learning to recognise alternative perspectives. In doing so, they experience cooperation, responsibility towards a shared goal, and the tensions inherent in democratic decision-making processes. Drawing on implementation experiences, the paper analyses the pedagogical design of the tool and discusses its contribution to strengthening critical thinking skills, fostering personal efficacy and cultivating open-mindedness and respect for different worldviews. By situating deradicalisation-related concerns within a broader civic education framework, the paper highlights an approach that seeks to avoid the limits of ideological imposition while still addressing the risks associated with extremist narratives. The final aim is to demonstrate how participative activities can contribute to democratic competence and resilience by equipping learners not with predefined answers, but with the tools necessary to navigate complexity in plural societies.

UNA COSTELLAZIONE LUMINOSA: COOPERATIVE LEARNING AND EXPRESSIVE LANGUAGES TO FOSTER CRITICAL, CREATIVE, AND CARING THINKING IN PRIMARY SCHOOL.

Annalisa Liuzzi (Università degli Studi di Modena e Reggio Emilia, Italy; Fondazione Reggio Children) · **Benedetta Melloni** (Università degli Studi di Modena e Reggio Emilia, Italy; Fondazione Reggio Children) · **Vittoria Martignago** (Università degli Studi di Modena e Reggio Emilia, Italy; Fondazione Reggio Children)

Democratic competences · Critical creative and caring thinking · Reggio Emilia Approach

Recent history has been characterized by a process of very rapid transformation: economic, political, social, and cultural factors have progressively intertwined, outlining a complex, precarious, and unstable global scenario (Tramma, 2024). Immersed in this same complexity, the field of education is called to critically reflect on its own purposes and, consequently, to critically rethink its pedagogical and didactic practices (Fadda, 2009). From a policy perspective, numerous contributions highlight the importance and necessity of promoting learning experiences and educational contexts capable of supporting the development of life competences in new generations (Sala et al., 2020). In this perspective, the school - in dialogue with the community and local institutions - represents a privileged context in which to design educational experiences aimed at fostering citizenship skills (COM(2025) 88 final) within participatory and hands-on environments, capable to promote meaningful practices of reasoning, listening, dialogue, critical reflection, and self-expression (Massa, 2000). Una costellazione luminosa is an educational project targeting third, fourth, and fifth grades of primary school, promoted by the Fondazione AIRC per la Ricerca sul Cancro ETS and implemented in collaboration with the participating schools, Librì Progetti Educativi, and Fondazione Reggio Children – Centro Loris Malaguzzi ETS. The project is structured around three workshop laboratories — Ricerca, Ascolto, and Trasformazione — designed as open learning contexts accord-

ing to the values of the Reggio Emilia Approach (REA). The workshops, which last approximately two hours, are held in the facilities of the 18 participating schools and include an initial large-group sharing session, a central phase of small-group work, and a final phase of collective reflection and sharing. Through a methodology based on listening, cooperative learning, and a research-oriented stance, the classes explore a shared issue starting from open, generative questions. Artistic languages - in particular graphic, narrative, visual, and performative - mediate the experience, offering multiple expressive, critical-reflective, and learning opportunities. To complement the process, focus groups with the teachers of the participating classes allow for an in-depth examination of the processes that emerged during the activities, and reflection on the contribution that such methodologies may provide to the development of transversal and democratic citizenship skills. This contribution presents the first findings of a qualitative and exploratory study carried out within this project, epistemologically framed within an integrated theoretical perspective in which socio-constructivism (Bruner, 1992) and complexity theories (Morin, 2000) intersect with the reflections proposed by the Philosophy for Children approach (Lipman, 2003). The qualitative analysis of data collected during the phases of the project - through participant observation, photographs, audio-video recordings of conversations, artifacts produced by the classes, and focus group transcripts - investigates the relationship between cooperative knowledge-building processes and the development of multidimensional thinking, articulated in its critical, creative, and caring dimensions.

EDUCATING FOR DEMOCRATIC CULTURE: THE ROLE OF PERSONAL EPISTEMOLOGIES IN CURRICULUM AND PEDAGOGY

Manuele De Conti (Università Mercatorum, Italy)

Personal epistemologies | School curricula | Competences for democratic culture

Dominant epistemological conceptions such as realism, pragmatism, or constructivism broadly inform school curricula, their aims, and their methodologies (Gramigna 2024; Osberg & Biesta, 2021; Osberg, Biesta, & Cilliers, 2008). This study examines how different epistemological models support competences for democratic culture and identifies the model most coherent with them. To achieve this objective, the study adopts as its theoretical frameworks the construct of paradigm (De Conti, 2016; Lincoln, Lynham & Guba, 2018; Kuhn, 1969) and, more specifically, that of personal epistemologies (Chiusaroli, 2022; Hofer, 2001; Yang & Tsai, 2012). The concept of paradigm is currently employed in the literature to denote the set of laws, theories, and methodologies shared by the scientific community. Beyond being an abstract schema, a paradigm grounds scientificity and the orientations through which teaching and school curricula are structured (Cf. Kuhn, 1969; Osberg, Biesta, & Cilliers, 2008). Personal epistemologies, by contrast, concern the beliefs held by individuals about the nature of knowledge, the processes of knowing, and the nature of learning (Schommer-Aikins, 2002), and may be considered an individual manifestation of paradigms. Personal epistemologies exert a systemic influence on the various dimensions of the person, from cognitive to behavioral and cultural aspects (Schommer-Aikins, 2004), and orient approaches to learning, relationality, critical thinking, argumentation, reflexivity, and metacognition, predisposing individuals toward lifelong learning (Aytaç, Özbilen & Genç, 2022; Bath & Smith, 2009; Dewey, 1933; Kuhn, 1991; King & Kitchener, 2002). Personal epistemologies therefore constitute an element of the cognitive framework that educational processes must consciously and appropriately structure (De Conti, 2025; Gramigna, 2021, 2024) in order to ensure both the achievement of pedagogical and social objectives and the coherence between teaching methodologies and such objectives (Gramigna, 2015). In this sense, personal epistemologies function as a regulatory principle of school

curricula, fostering their overall alignment (De Conti, 2025; Osberg, Biesta, & Cilliers, 2008). However, the development of personal epistemologies is not regulated exclusively by biological processes. Although supported by developmental cognitive processes, their development is culturally mediated. This underscores the importance of education in the development of the individual and, circularly, of society (Cf. Dewey, 1916), and raises a foundational question: which epistemological model best fosters the development of competences for democratic culture? Methodologically, the contribution compares epistemological models and personal epistemologies considered in the literature to be evolutionarily more sophisticated, with competences for democratic culture. By employing the method of comparative conceptual analysis with dimensional extraction, a matrix of epistemological models and personal epistemologies will be produced on the basis of the relevant literature (Cf. Bigge, 1982; De Conti, 2016; Lincoln, Lynham & Guba, 2018). The comparison will be conducted according to the criterion of greater coherence with the competences for democratic culture drawn from the Reference Framework of Competences for Democratic Culture developed by the Council of Europe (CoE, 2018a; CoE, 2018b). The outcome of this methodologically guided reflection may serve as a foundation for the theoretical and empirical evaluation and design of school curricula and teaching methodologies, in order to ensure their alignment with democratic culture.

CULTIVATING DEMOCRATIC AGENCY IN PRIMARY SCHOOL: THE MINIGIUNTA PROJECT IN ROVERETO MUNICIPALITY

Chiara Tamanini (University of Trento, Italy) · **Paolo Bonafede** (University of Trento, Italy) · **Sabrina Madeddu** (University of Trento, Italy)

Democratic education | Philosophy for Children | Civic participation

Democratic backsliding, growing inequalities, and an infosphere saturated by polarization make the relationship between schooling and democracy a renewed educational urgency. If democracy is not only a set of principles but a way of living together, then schools must offer children opportunities to experience participation, deliberation, and responsibility as early as possible. Creating civic "micro-projects" in childhood matters because it nurtures habits of listening, justification, and care for the common world, rather than treating citizenship as a distant future status. Methodologically, dialogic and collaborative practices are particularly promising to enact democracy for learning while cultivating learning for democracy (Biesta, 2011; Dewey 1916, 1938). Philosophy for Children (P4C) operationalizes this ambition through the Community of Inquiry: children collectively generate questions, argue with reasons, and co-construct provisional answers (Lipman, 2003). P4C therefore works as an exploratory pedagogy that simultaneously supports critical thinking (concept clarification, reasons, counterexamples) and democratic competence (turn-taking, inclusion, shared norms, collective decisions), foregrounding subjectification as the formation of agents able to speak and act in a plural world (M.R.Gregory, J. Haynes, K. Murris, 2017). We present MiniGiunta (Rovereto, Italy), a civic education project implemented in a 4th-grade primary class in collaboration with the Municipality and classroom teachers (December 2025–January 2026). Across three meetings, children engaged in: (1) a P4C inquiry on perspective and "seeing differently", followed by an "urban explorers" mission to photograph hidden beauties and areas needing improvement; (2) a P4C inquiry on beauty/neglect and a gallery-based discussion of the photos, producing situated proposals for the neighbourhood and the city; (3) a metareflective P4C dialogue on participation and preparation for a simulated municipal council (role assignment and peer-education on civic roles). Continuous co-design with teachers led to substantive adaptations (e.g., simplifying community rules, reallocating time from planned activities to sustained inquiry, and shifting some written work to classroom follow-up) in order to respond to classroom dynamics and maximize children's agency (Biesta 2017). Findings are being developed through qualitative analysis of the meeting transcripts and children's artefacts (photos and written rationales), focusing on indicators of democratic participation and critical thinking (question quality, justificatory moves, perspective-taking, collective problem framing). We intend to present preliminary evidence, that highlights high engagement, rich argumentation, and the emergence of feasible, community-oriented proposals.

DOES DEMOCRACY REQUIRE HUMANISTIC EDUCATION?

Martin Strouhal (Charles University, Faculty of Arts, Czech Republic (Czechia))

Humanistic Education | Cultural Crisis | Democratic culture

This paper addresses the pressing issue of the erosion of humanistic and aesthetic literacy in Czech grammar schools and examines its relationship to a broader cultural crisis. The analysis is based on a critical evaluation of the Framework Educational Programmes (2004/2025 – the basis of the Czech curricula), whose lack of substantive anchoring and conceptual clarity hinders the systematic and long-term development of pupils' humanistic education. The theoretical framework draws on the reflections of Hannah Arendt (2006/1961) and Alain Finkielkraut (1987; 1999; 2013; 2016) concerning the decline of scholastic knowledge and the weakening of cultural traditions—processes which, in their view,

endanger the capacity of the younger generation to enter the world of shared meaning, interpretation, and critical judgement. Building on these insights, the paper argues that humanistic education constitutes a necessary condition of democratic culture, as it provides the horizon of understanding that enables orientation in the public sphere, the cultivation of values, and an appreciation of historical and cultural continuity (Steiner, 1974). Failures in humanistic and aesthetic education therefore represent not merely didactic shortcomings but a threat to the very foundations of democratic life. The paper aims to initiate a discussion on the renewal of humanistic content in education, its normative grounding, and possible ways to respond to the current cultural and societal crisis (Kambouchner, 2018).

EXPERIENCE AS ESSENCE: A "FUORICLASSE" JOURNEY. FOR A DEMOCRATIC SCHOOL OUTSIDE AND INSIDE THE CLASSROOM

Federica Bruzzone (IC Pegli, Ada Negri Primary School, experimental project "FuoriClasse", Genoa, Italy)

Institutional Pedagogy | Experiential Learning | Active Citizenship

This contribution investigates the inseparable and fundamental link between education and democracy through the analysis of the experimental outdoor learning project "FuoriClasse", implemented in a public primary school in Genoa. In an era characterised by exclusionary technicalism and normative pressures toward authoritarian and standardised models, the "FuoriClasse" project presents itself as a form of pedagogical resistance aimed at restoring the school's role as a permanent laboratory for active participation and critical thinking. It embraces the idea of a "school without borders", where childhood is seen as a privileged phase for the formation of the political subject through exploration, dialogue, research and authentic direct experience. The project serves as a paradigm capable of overcoming the dualism between theory and praxis by placing experience at the heart of the educational process. Its roots lie in the vision of scholars such as Freire (1968) and Dewey (1938), conceiving education not as preparation for life, but as life itself: a social process through which the classroom, the street, and the city are transformed into laboratories of genuine democracy. In line with Morin's teaching (1999), the objective is the formation of "well-made heads," capable of inhabiting the complexity of the present and deconstructing the fragmentation of knowledge. In this view, "FuoriClasse" implements a radical departure from frontal teaching, adopting a research methodology and an alternative to standard textbooks, overcoming disciplinary divisions. This approach allows students to live the territory in its totality: parks, libraries, museums and shops, transforming it into the "living book" of the community. It prioritises learning mediated by the body in motion as the pivot of an authentic experience that educates toward choice, autonomy, empathy, and responsibility toward the world. Through direct experience and flow learning (Cornel, 2015), the techniques of Institutional Pedagogy proposed by Freinet (1994) emerge as the project's methodological core. One of the key tools is the Individual Work Plan: in a framework of self-organisation and constant self-assessment, each child chooses which tasks to engage in, defining personal short-, medium-, and long-term goals. Thus, learning becomes a responsible choice where each individual is the builder of their own growth path. This autonomy intertwines with the collective dimension in the Class Assembly, a sovereign body governed by specific roles and the consensus method: the negotiation of rules and decision-making occurs through counter-proposals aimed at unanimity. This practice transforms the class into an anti-authoritarian community where individuality finds space in collective fulfilment, exemplified by the Class Magazine. This quarterly publication, created by the editorial collective and sold to the public, self-finances printing and supports childhood in Palestine. This contribution demonstrates how cooperation, dialogue, listening, and free expression are the essence of democratic education. Students feel like citizens of the world, fostering a reflective, critical, and engaged mindset capable of critically inhabiting the

complexity of reality. Through active participation in the shared construction of knowledge and the assumption of individual and collective responsibility, "FuoriClasse" describes an open and inclusive school that lays the foundations for a more just, cohesive, and resilient society.

DEMOCRACY AS DELIBERATIVE PRACTICE. ETHICAL DILEMMAS AND PLATONE 3.0 AI IN THE PATHS MODEL OF CRITICAL DEMOCRATIC EDUCATION

Samuele Calzone (INDIRE, Italy) · **Dario De Santis** (INDIRE, Italy)

Ethical Deliberation · Epistemic Vigilance · AI-Mediated Learning

In contemporary educational contexts marked by democratic fragility and accelerated digital transformation, the cultivation of critical thinking has become a central pedagogical priority for sustaining democratic agency. This paper presents the theoretical framework and pedagogical architecture of PATHS (A Philosophical Approach to Thinking Skills), an educational model designed to foster democratic competencies through structured engagement with ethical dilemmas. PATHS conceptualizes critical thinking not as an isolated cognitive skill but as a socially situated, deliberative practice enabling learners to navigate complexity, ambiguity, and value pluralism. Democracy requires citizens capable of reflective judgment, moral evaluation, and reasoned participation in public discourse. Contemporary scholarship in democratic pedagogy emphasises that critical thinking entails interrogating assumptions, assessing evidence, detecting bias, and articulating justified positions in dialogical contexts. Within this framework, ethical dilemmas function as pedagogical devices that foreground the normative tensions inherent in collective decision-making. By confronting learners with competing yet defensible alternatives, dilemmas expose structural dynamics of democratic life: negotiation among plural values, recognition of legitimate disagreement, and reason-giving under conditions of uncertainty. The PATHS model operationalises this nexus through structured engagement with ethically complex scenarios designed to generate cognitive conflict and activate analytic reasoning, evaluative judgment, and dialogic interaction. Students collaboratively examine cases, construct and challenge arguments, anticipate counter-arguments, and publicly defend their positions in regulated debates. These practices align with contemporary models of higher-order thinking, argumentation theory, and dialogic pedagogy, positioning ethical dilemmas as epistemic tools that scaffold reflective deliberation and cultivate democratic “habits of mind,” including intellectual humility, perspective-taking, justificatory reasoning, and respect for dissent. Evidence from the national initiative Olimpiadi dei Dilemmi Etici, implemented across secondary schools within PATHS, demonstrates the model’s capacity to strengthen deliberative competencies. To date, over 4,000 teachers have experimented with PATHS, and these dilemmas have given rise to the Ethical Dilemma Olympics, which this year reached 40 schools with over 100 teams: it is a remarkable exercise in democracy. In this structured yet participatory setting, student teams analyse dual-scenario dilemmas and engage in evidence-based public argumentation, consolidating recognition of plural viewpoints, commitment to reason-giving, and dialogical responsibility. Ethical deliberation thus becomes a pedagogically regulated microcosm of democratic practice. The relevance of this approach is amplified within AI-mediated digital ecosystems, where algorithmic curation and generative systems reshape epistemic environments and public discourse. Educational research underscores the urgency of fostering “epistemic vigilance” and robust critical AI literacy — the capacity to interrogate sources, contextualise algorithmic outputs, and evaluate AI-generated content within explicit normative frameworks. PATHS integrates ethical deliberation with digital awareness, positioning critical thinking as a safeguard against misinformation and unreflective technological reliance. A key component is Platone 3.0 AI, a maieutic chatbot developed by the PATHS research group, designed to privilege epistemic process over outcome. Inspired by a

neo-Platonic dialogical paradigm, it guides students through structured questioning and argumentative refinement, supporting dilemma analysis and reflection on complex real-life issues. By foregrounding inquiry and justificatory reasoning, the model fosters active, digital, and democratic citizenship.

WHICH FACTORS SHAPE THE DEVELOPMENT OF CRITICAL THINKING SKILLS AT UNIVERSITY

Guillaume Cuny (Nantes Université, France)

critical thinking | higher education | curricula

Within the framework of its Academic Freedom in Action project, the Council of Europe has expressed the ambition to “protect and promote the values of academic freedom, ensuring that higher education remains a stronghold of democracy and critical thinking.” From this perspective, the mission of universities can no longer be limited to the production and transmission of knowledge; it also includes the development, among both staff and students, of critical skills enabling them to assess the validity of arguments and information. However, these critical skills do not appear to be evenly distributed across academic disciplines. A survey published by the Jean Jaurès Foundation in 2023 (Kraus & al. 2023) shows that adherence to misinformation varies according to students’ field of study: students in Health and Law appear more likely to endorse false information than those enrolled in the Social Sciences and Humanities or in the Arts. Based on this observation, we formulate the general hypothesis that disciplinary affiliations shape differentiated relationships to knowledge, which are more or less conducive to the development of critical thinking skills. This raises the question of which dimensions are actually decisive in explaining adherence to or resistance against misinformation. Do these variations stem from students’ ways of learning, with a more instrumental relationship to knowledge being, for instance, less conducive to the development of reflexivity? Is rote learning necessarily associated with weaker critical capacities, or should greater attention be paid to modes of assessment, which may impose particular relationships to knowledge (Abrami & al, 2015) ? Do they relate to the degree of consensus within disciplines regarding what counts as legitimate knowledge to be taught, potentially limiting the questioning of highly stabilised forms of knowledge (Millet, 2003 ; David, 2024) ? Do they depend on the place given to epistemology within disciplinary curricula (Bernstein, 1971 ; Young, 1971 ; Forquin, 2008 ; Shay, 2016) or on the specific histories of disciplines and the additional efforts some have had to make in order to establish themselves as sciences ? Finally, what role do major sociological variables such as gender and social background play in these processes? Drawing on a questionnaire survey conducted with 2,000 students at the University of Nantes, aimed at measuring their degree of adherence to misinformation and collecting data on their ways of learning and accessing information, as well as twelve collective interviews carried out with students grouped by discipline focusing on their relationships to their field of study and to the knowledge transmitted within it, this paper analyses the factors most likely to influence adherence to or resistance against misinformation. Based on these findings, it outlines possible avenues for action to strengthen the development of critical thinking skills in the university of tomorrow.

TEACHING AS INQUIRY: PHILOSOPHY FOR CHILDREN AS A PATH TO THE TRANSFORMATION OF PROFESSIONAL HABITUS IN EARLY CHILDHOOD AND PRIMARY EDUCATION

Daniel Mastrosimone (University of Turin, Italy) · **Valerio Ferrero** (University of Turin, Italy)

Community of Philosophical Inquiry | Philosophy for Children | Teacher Habitus

This paper explores whether and how Philosophy for Children can function as a tool for the professional development of early childhood and primary school teachers through a structured training programme and the subsequent implementation of the approach in classroom practice. The study is framed within a pragmatist and dialogic conception of education (Barak, 2024; Biesta, 1995; Freire, 1970 Kazepides, 2012), according to which schooling is a space for shared inquiry and for the cultivation of democratic dispositions. Drawing on Dewey's theory of experience and community (1902; 1938), on the Philosophy for Children tradition (Lipman, 1991; 2010), and on the notion of professional habitus as a system of embodied dispositions orienting practice (Feldman, 2016; Nairz-Wirth & Feldmann, 2019), the project assumes that introducing community of philosophical inquiry may generate transformations not only at the level of techniques, but in teachers' epistemic and relational stance. The research focuses on the following questions: Does participation in a structured Philosophy for Children training programme modify teachers' conceptions of knowledge, learning and teaching? How does the implementation of regular philosophical inquiry sessions affect their professional posture, particularly in relation to dialogue and classroom authority? Are changes observable in questioning practices and in attention to the relational dimension of teaching? Fourteen in-service teachers participated in the project: ten from primary schools (ages 6–11) and four from early childhood settings (ages 3–6). The training consisted of 25 hours combining theoretical input on the epistemological and pedagogical foundations of Philosophy for Children with experiential workshops based on the community of inquiry model. Teachers then implemented fortnightly community of philosophical inquiry sessions in their classes over a six-month period. A qualitative, longitudinal design (Lichtman, 2010 Walford, 2001) was adopted. Data were collected through these tools: an initial written open-ended interview exploring beliefs about teaching, learning and dialogue; participant observation during selected training meetings and classroom sessions, documented through field notes; in-depth semi-structured interviews conducted at the end of the implementation phase. Data were analysed through thematic coding (Braun & Clarke, 2022), integrating inductive procedures with analytic categories derived from the theoretical framework. Triangulation across sources (Ma & Norwich, 2007; Oliver-Hoyo & Allen, 2006) supported the credibility of interpretations. Preliminary results indicate a shift from a predominantly instructional and outcome-oriented stance towards a more dialogic and inquiry-based posture. Teachers report greater awareness of the relational dimension of their role and of the ethical responsibility involved in facilitating dialogue. Observations confirm an increased use of open, generative questions, a reduction of evaluative interventions, and a broader distribution of speaking turns. Participants describe a progressive decentring of the teacher's epistemic authority and a stronger focus on listening and on building on pupils' contributions. These findings suggest that sustained engagement with Philosophy for Children can affect teachers' professional habitus, particularly in relation to questioning practices and relational attention. The study highlights the relevance of long-term, practice-based training in promoting pedagogical transformations aligned with democratic and dialogic aims, while acknowledging the exploratory nature and limited scale of the research.

PHILOSOPHY FOR CHILDREN IN SCHOOL-WORK TRAINING: TEACHING CRITICAL THINKING THROUGH OBSERVATION AND DIALOGUE

Nicolò Valenzano (University of Turin, Italy) · **Carlo Maggi** (University of Turin, Italy)

Philosophy for Children | critical thinking | School-Work Training

In line with the need to promote democratic skills and sound critical thinking (Dewey, 1916; European Commission JRC, 2020), this paper presents an innovative experience carried out as part of the Pathways for Transversal Skills and Orientation (PCTO) in a fourth-year class at a vocational institute for health and social care. As part of an initiative aimed at promoting the recognition of children's thinking skills among secondary school students, the intervention utilised the Philosophy for Children (P4C) methodology (Lipman, 2003) with a twofold objective: to develop adolescents' critical thinking through philosophical inquiry and to equip them with the relational skills necessary to operate in primary school contexts. In the first phase, the students participated in four P4C sessions, through which they began to build a community of inquiry and experienced first-hand how a P4C session functions. Initially, in agreement with the class teachers, it was assumed that this phase would provide the adolescents with sufficient foundational knowledge to attempt to act as facilitators in the primary school class, supported by the teacher. This initial objective proved to be overly ambitious; consequently, in reshaping the proposal, the focus was recalibrated towards the acquisition of skills for structured observation (Cohen, Manion, Morrison, 2017). Students were subsequently provided with a 'Discussion Check-list' (Heesen, 2002), a tool designed to assess children's behaviour and the quality of dialogue. The second phase of the project involved two P4C sessions in a fifth-year primary school class, led by an external expert acting as the facilitator, with the direct involvement of a small group of adolescents: each session included two co-facilitators and four observers. The debriefing phase (the third phase), structured in two parts, was crucial for reflecting upon democratic attitude. The first part, reserved for the operational group, brought out significant reflections on the complexity of active listening and the challenge of 'suspending judgement'. In particular, the adolescents experienced the difficulty of listening to children without feeling the urge to intervene to correct them, provide the 'right answer', or impose an adult perspective on thoughts that sometimes manifest as unpredictable (Kohan, 2006). This constitutes a fundamental democratic discovery: learning to tolerate differing opinions and allowing others to construct their own thoughts. The students recounted their surprise at witnessing the depth of the children's reasoning, effectively dismantling age-related prejudices and recognising the dignity of every voice—a core pillar of democracy. The second part of the debriefing involved the entire class and took the form of a P4C meta-session. Starting with the sharing of data collected by the observers and the impressions of the co-facilitators, the class philosophically explored the role of the facilitator and the importance of respecting the ideas of all session participants (Kennedy, 2004). The experience demonstrates how the integration of philosophical practice, observational responsibility, and shared meta-reflection can transform the PCTO into a genuine learning environment that cultivates democracy. Collaboration towards a common goal and the shared analysis of practices have enabled students to develop the skills required to face the challenges of contemporary society with democratic openness.

AN INNOVATIVE AND HOLISTIC APPROACH IN THE MAGIC OF KNOWLEDGE – THE NIGHT OF THE LITTLE EXPLORERS: EMBODIED COGNITION, DYNAMIC LEARNING, AND THE SCHOOL AS AN EXPERIENTIAL ARCHIPELAGO

Eleonora Spada (università degli studi di Palermo, Italy) · **Rosalba Ventura** (università degli studi di Palermo, Italy) · **Eliana Danzì** (università degli studi di Palermo, Italy) · **Alida Cosenza** (università degli studi di Palermo, Italy) · **Elena Mignosi** (università degli studi di Palermo, Italy)

embodied cognition · education · innovative approach

This work presents the key aspects of an innovative educational approach developed within the project “The Magic of Knowledge: The Night of the Little Explorers”. The project was conceived in 2025 by a group of researchers from the University of Palermo (Italy) with the aim of combining experiential learning with the principles of embodied cognition in order to promote dynamic, multisensory, and participatory forms of knowledge construction in primary education. The initiative was first implemented in June 2025 at the “Ignazio Buttitta” Comprehensive School in Bagheria (Palermo, Italy). During this event, local educational communities, primary school students, and families were actively involved. The project formed part of a broader university Third Mission research program aimed at experimenting with innovative educational models capable of integrating scientific learning, bodily experience, and community participation. The theoretical framework of the project was grounded in embodied learning, which emphasizes the deep connection between cognitive processes and bodily, perceptual, and relational dimensions of experience (Barsalou, 2008; Wilson, 2002). Within this perspective, the school is reinterpreted not only as a place of knowledge transmission but also as a relational and cultural environment capable of activating immersive learning experiences in which knowledge emerges from the interaction between body, environment, and social context. The project proposed a symbolic and pedagogical transformation of the school into an “archipelago of knowledge”, composed of five thematic experiential spaces that children could explore through circular and multimodal learning pathways. These spaces included “Senti-Menti”, dedicated to sensory and emotional exploration; “Debug”, focused on logical and computational thinking through unplugged coding activities; “Tutti Suonati”, a collaborative music laboratory centered on rhythm and collective sound experiences; “Young Scientists”, an inquiry-based environment devoted to observation and experimentation; and “Body to Body”, a space designed to promote learning through movement, imitation, and relational interaction. Within this experiential structure, knowledge was not transmitted passively but co-constructed through embodied experiences, social interaction, and sensory engagement that simultaneously activated cognitive, emotional, and relational dimensions. A distinctive element of the project was the active involvement of families, who participated in preparatory training sessions and engaged in the activities together with their children, strengthening the connection between school, university, and the local community. Following the initial implementation, the project was replicated in a more structured research format that introduced systematic observation tools aimed at collecting data on children’s cognitive, emotional, and social behaviors during the activities. This research-oriented development reinforces the scientific dimension of the intervention and supports its potential replicability in other educational contexts.

SERVICE LEARNING AS A PEDAGOGICAL APPROACH TO FOSTER DEMOCRATIC CITIZENSHIP AND CRITICAL THINKING

Lorenza Orlandini (INDIRE, Italy)

service learning | critical thinking | educational innovation

This contribution reflects on Service Learning (SL) as an educational approach capable of fostering democratic competences and critical thinking in schools, in response to the profound social, cultural, and technological transformations affecting contemporary democracies. Drawing on the Deweyan idea of school as an environment of and for democracy (Dewey, 1916), the paper argues that SL represents a pedagogical framework able to integrate meaningful learning, civic participation, and the co-construction of knowledge (Eyler & Giles, 1999; Furco, 1996). In a context marked by the crisis of democratic practices, the polarization of public discourse, and forms of onlife existence increasingly mediated by digital platforms and artificial intelligence systems (Floridi, 2015, 2025), it has become urgent to develop students' capacity to critically interrogate information, relationships, collective needs, and decision-making processes. Schools are therefore called upon to support the development of democratic competences and critical thinking skills that enable young people to participate responsibly in public life. This need is consistent with European educational frameworks that recognize the central role of schools in preparing active, responsible, and participatory citizens (Council of Europe, 2018; Sala et al., 2020). Within this perspective, SL (Furco, 1996; Tapia, 2006; Orlandini et al., 2020) can be understood as a curricular and interdisciplinary approach in which teachers, students, and community stakeholders co-design learning pathways aimed at addressing real social issues. Local authorities, associations, cultural institutions, and third-sector organizations may all be involved in these processes, strengthening the relationship between school and community. The methodological core of SL lies in the integration of participatory inquiry, experiential learning, cooperative work, and structured moments of reflection (Bringle & Hatcher, 1995; Dewey, 1938). Students are engaged in analysing a community problem, defining shared goals, and implementing service actions with a tangible impact. In this perspective, the "service" component is not conceived as occasional volunteering but as an intentional, curricular, and reflective practice that connects disciplinary knowledge with social responsibility and students' agency (Mitchell, 2008). Particular attention is therefore devoted to the teaching conditions that enable SL to support student-centred pedagogies. Through these practices, the classroom becomes a deliberative space where students learn to negotiate meanings, make reasoned decisions, and evaluate the consequences of their choices (Westheimer & Kahne, 2004). Finally, the paper discusses possible assessment criteria and tools consistent with the transformative nature of SL. These include democratic competence rubrics, reflective journals, systematic observations, self- and peer-assessment practices, and evidence of impact on the local context. Previous research highlights positive effects of SL on student engagement, academic achievement, and socio-civic development (Billig, 2000; Celio et al., 2011). The aim of the contribution is to show that curricular innovation does not simply consist in adopting active methodologies, but in building educational ecologies where learning means participating responsibly in shared civic life. The presentation will also include examples of SL projects implemented in Italian primary and secondary schools, highlighting enabling factors and critical issues, such as time management, the construction of local partnerships, and organizational sustainability, and offering insights into the transferability of this approach to other educational contexts.

CULTIVATING CRITICAL THINKERS FOR DEMOCRATIC LIFE: INNOVATIVE PRACTICES IN SCHOOLING

Tawanda Mataka (CAPE PENINSULA UNIVERSITY OF TECHNOLOGY, South Africa)

Innovation | democratic | competence

The contemporary educational landscape stands at a crossroads where multiple crises converge to challenge foundational assumptions about schooling's democratic purposes. Political disaffection spreads across established democracies as citizens withdraw from civic participation. Algorithmic governance increasingly mediates access to information and opportunity through opaque systems escaping public accountability. What philosopher Luciano Floridi terms "onlife existence"the blending of analog and digital experience reshapes how young people encounter knowledge and construct identities, particularly as artificial intelligence permeates learning environments. These intersecting developments demand urgent reconsideration of how schools cultivate both democratic competence and critical thinking. Operating within a critical-interpretivist paradigm, this investigation rejects claims to value-neutral inquiry while embracing the position that educational knowledge emerges from specific historical conditions and power relations rather than objective certainties. This stance enables examination of how pedagogical practices either interrupt or reproduce existing social arrangements. The central argument holds that democratic education constitutes an ontological condition of meaningful learning rather than merely instrumental preparation for future citizenship. This framing synthesises three theoretical traditions: critical theory, illuminating how educational institutions reproduce or challenge hegemonic structures; post-foundational political thought, questioning essentialist conceptions of democracy while embracing contingency; and epistemic justice frameworks, examining how knowledge practices systematically include or marginalize diverse voices. The methodological approach employs theoretical synthesis, weaving conceptual insights across disciplinary boundaries through critical engagement with philosophical, sociological, and educational literature. This methodology aims not to measure effects but to generate new configurations of meaning reframing how democratic education might be practiced within schools. The analysis unfolds across three interconnected registers: how pedagogical architectures spatial arrangements, curricular rhythms, and interaction norms cultivate or foreclose capacities for collective judgment through shared knowledge construction; the epistemic challenges learners face in digitally mediated spheres where traditional markers of truth undergo constant renegotiation; and structural asymmetries distorting access to democratic educational experiences, questioning whether innovation frameworks address historical injustices. Analysis reveals that institutional design fundamentally shapes democratic capacity development. Dialogic methodologies enabling cooperation toward shared goals prove particularly effective for fostering critical thinking and democratic dispositions, requiring students to navigate disagreement and assume responsibility for collective outcomes. However, current innovation frameworks often overlook persistent structural asymmetries, potentially extending democratic experiences primarily to privileged populations. The paper advances democratic education as provisional enactment of political life within schools' sites where coexistence is perpetually reworked through encounter and conflict rather than passive transmission of civic content. Recommendations include curriculum redesign prioritising collaborative problem-solving of complex issues; teacher preparation emphasising facilitation of democratic experimentation; and assessment practices valuing shared knowledge construction over individual performance. As theoretical synthesis, findings remain provisional and context-sensitive, requiring empirical validation across diverse settings while remaining attentive to non-Western educational philosophies. Fundamentally, reclaiming education's democratic vocation requires embracing innovative pedagogies that cultivate thinking skills and civic confidence through lived democratic experience recognizing that schools become democratic not by teaching about democracy but by enacting it. Key words: School innovation; democratic competence; critical thinking; dialogic pedagogy; civic agency

NEOSOCRATIC DIALOGUE AND DEMOCRATIC CULTURE IN EDUCATION - A PEDAGOGICAL APPROACH FOR CULTIVATING DEMOCRATIC COMPETENCES

Evelina Ivanova-Vardzhiyska (Sofia University St. Kliment Ohridski, Bulgaria) · **Paolo Dordoni** (Liceo Pascoli, Bolzano; LIA, Rovereto)

Neosocratic Dialogue | Democratic Culture | Thinking together

Contemporary philosophy and education increasingly recognise the importance of dialogical approaches such as philosophical debate, Philosophy for Children (P4C), communities of inquiry, and deliberative practices. Within this broader field, Neosocratic Dialogue—developed in the tradition of Leonard Nelson (1882–1927) and Gustav Heckmann (1898–1996)—offers a distinctive way of practising philosophy collaboratively by connecting personal experience with philosophical inquiry. Historically, Neosocratic Dialogue emerged in the context of intellectual resistance in Germany during the Weimar Republic, the Nazi period, and the years of exile and reconstruction after the Second World War. From its origins, the practice has been closely linked to the aspiration to sustain and promote democratic culture—even in circumstances where democratic life appeared to be under threat. Today, Neosocratic Dialogue has developed into a widely used philosophical practice supporting democratic education across diverse contexts, including adult education, schools, universities, civil society initiatives, business ethics, and health care. It represents a distinctive form of collaborative philosophical inquiry in which participants, guided by a facilitator, explore authentic beliefs grounded in reflection on personal experience. This dialogical process—often described as Miteinanderdenken ("thinking together")—encourages slow and reflective thinking, critical examination of assumptions, mutual understanding, and a shared search for truth and consensus. Dialogues typically begin with the careful analysis of a lived experience proposed by participants, which becomes the starting point for conceptual clarification and philosophical investigation without appealing to authority. By recognising the dignity of each participant as an autonomous subject and fostering highly organised collaborative thinking, Neosocratic Dialogue creates meaningful opportunities for engaging with values, perspectives, and shared understanding. In this way, theoretical reflection and practical experience, rational argument and emotional engagement, inquiry and mutual respect remain deeply interconnected. The presentation draws on the Erasmus+ project Development of Competences for Democratic Culture through Neosocratic Dialogue (2020–2023), implemented by Sokratovské rozhovory z.s., Collegio Arcivescovile Celestino Endrici, and Plovdiv University Paisii Hilendarski. The project explored how Neosocratic Dialogue can contribute to the development of democratic competences in education, particularly in relation to the Council of Europe Reference Framework of Competences for Democratic Culture (RFCDC). One of the key outcomes of the project is the handbook The Power of Consensus, which introduces teachers to the principles of Neosocratic Dialogue and provides a set of educational activities designed to cultivate dialogical attitudes and democratic competences, together with practical guidelines for facilitating philosophical dialogue in school contexts. Building on this project experience, the presentation offers examples of how Neosocratic Dialogue can be implemented in educational settings with teachers, students, and pupils. It also discusses how activities from the handbook can support the development of democratic

competences at different educational levels, using the RFCDC as a common reference framework. These experiences point to the potential of Neosocratic Dialogue as a pedagogical approach capable of strengthening democratic culture in education and suggest directions for further research and implementation on a broader scale.

STRUCTURED DISCOURSE WORKSHOPS AS A TOOL FOR FOSTERING DEMOCRATIC COMPETENCIES IN SCHOOLS

Patrik Geloneck (Goethe University Frankfurt, Germany) · **Monika Oberle** (Goethe University Frankfurt, Germany)

democratic competencies · pluralistic orientations · political discussion skills

Civic education plays a central role in enabling young people to navigate pluralistic and increasingly polarized societies. Democratic competencies such as openness to diverse perspectives, political tolerance, and the ability to engage constructively with disagreement are widely regarded as key prerequisites for informed participation and democratic resilience (Avery, 2002, p. 113; Hess & McAvoy, 2014, p. 7; Mercer & Littleton, 2007, p. 2). While international research has examined deliberative formats in educational settings (Persson et al., 2020), systematically evaluated and standardized discourse interventions specifically targeting pluralistic orientations remain scarce in the German school context. Against this background, the proposed presentation introduces the conceptual framework and results of the ongoing evaluation of a discourse workshop developed by the non-profit organisation apropolis e.V. (https://apropolis.org), contributing to current debates by linking theoretical perspectives on political discourse skills with the design and empirical examination of a concrete educational intervention. In this contribution, pluralistic orientations are understood as students' acceptance of political diversity, the perceived legitimacy of dissent, and their willingness to engage with competing political positions (Wenzel, 2023, pp. 58–61). The workshop targets this dimension of democratic learning, going beyond factual knowledge toward students' normative and dispositional engagement with political plurality. The workshop "Streiten, aber richtig!" combines several didactic elements, including collaboratively developed discussion rules, values-based reflection phases, the analysis of critical incidents, structured confrontational discussion formats, a parliamentary role play, and a counterfactual "what if?" exercise. These elements create a learning environment that is both supportive and challenging, allowing students to practice dealing with disagreement, articulating arguments, and engaging with alternative viewpoints – skills consistently identified as core components of democratic competence in civic education research (Detjen et al., 2012; Council of Europe, 2018, p. 38). The evaluation follows a pretest–posttest design with approximately

n=600 students in grades 7 to 12 across different secondary school types, including lower and middle track, academic, special education, and vocational schools. The study aims to capture students` evaluation of the workshop as well as their learning effects using a semi-standardized questionnaire. The survey asks students` to evaluate the workshop after participation and measures changes in their discursive political self-efficacy and pluralistic orientations such as openness to opposing viewpoints. The study draws on validated scales developed by Shrout et al. (2022), whose facets emotional tolerance, intellectual tolerance, non-rigidity, and pluralistic motivation, correspond closely to the competency dimensions targeted by the workshop. The instrument has been adapted for use in the German school-age context. Additionally, instruments from Oberle et al. (2020) are used to measure changes in political interest and self-efficacy. The presentation addresses three aspects: the conceptual and theoretical foundations of the workshop, the methodological design of the study, and selected results of the empirical evaluation. The presentation concludes by outlining perspectives for future research, including the potential of longitudinal and control-group designs and additional qualitative methods. By addressing both the potentials and limitations of structured discourse formats under real-world school conditions, it aims to stimulate discussion on how democratic competencies can be fostered through targeted educational interventions.

LIFE SKILLS EDUCATION AND DEMOCRATIC CLASSROOM PRACTICES: TEACHERS' EXPERIENCES OF IMPLEMENTING THE LIFE SKILLS TRAINING PROGRAMME IN PRIMARY SCHOOLS

Elisabetta Nigris (Università degli Studi di Milano-Bicocca, Italy) · **Barbara Balconi** (Università degli Studi di Milano-Bicocca, Italy) · **Sofia Bosatelli** (Università degli Studi di Milano-Bicocca, Italy) · **Matilda Morosini** (Università degli Studi di Milano-Bicocca, Italy)

Life Skills Education | Democratic Classroom Practices | Primary Education

This contribution presents the findings of a qualitative study conducted during the implementation of the Life Skills Training Programme (LSTP) in primary education with the local Health Protection Agency. The study explores how the programme is translated into everyday school practices and examines the meanings, perceived changes, and challenges emerging from the experiences of teachers and teacher-trainers involved in its implementation. LSTP is a preventive programme in the socio-health field aimed at reducing substance use and preventing violent behaviours by addressing the social and psychological factors associated with risk behaviours (Botvin et al., 1995; 2003). It focuses on three core components: personal self-regulation, social skills development, and resistance to substance use, integrating health education with the promotion of positive attitudes and responsible decision-making (Botvin et al., 2015). In school contexts, these dimensions foster relational competences, reflective dialogue, and participatory classroom practices that enable pupils to experience cooperation, responsibility, and shared decision-making, thus supporting the development of democratic competences. From this perspective, the programme can also be interpreted as a pedagogical device that contributes to constructing classrooms as spaces for democracy (Dewey, 1916). The study is situated within an ecological perspective (Mortari, 2007) and adopts a fourth-generation evaluation approach (Lincoln & Guba, 1989), inspired by the principles of participatory evaluation (Bezzi, 2010). The research develops along three main dimensions: analysing perceived effectiveness and critical issues among teachers and teacher-trainers; identifying changes observed in both

students and teachers; and defining guiding principles to improve and consolidate the programme and its training processes. Four focus groups were conducted remotely with teachers (N = 39), and three with teacher-trainers (N = 22). All sessions were audio-recorded, transcribed verbatim, and analysed through qualitative content analysis (Krippendorff, 2004), supported by a coding system inspired by Grounded Theory (Charmaz, 2016; Tarozzi, 2008). Codes were grouped into categories representing shared units of meaning through intersubjective verification among researchers. A descriptive analysis was also conducted on teachers' pedagogical documentation. Findings indicate that teachers perceive LSTP as strengthening students' personal and social competences and fostering dialogic, participatory classroom practices that promote cooperation, responsibility, and shared decision-making, while also supporting students' well-being and enhancing classroom cohesion. Active methodologies and structured activities foster teachers' professional development by encouraging reflective and collaborative practice, especially when the programme is integrated into the curriculum and implemented continuously. However, challenges emerge, including the perceived rigidity of some components, difficulties in engaging families, and the need to update content to address evolving educational contexts. Teacher-trainers emphasise training as a space for dialogue among professionals across local contexts, while also highlighting the complexity of their dual role as teachers and trainers, challenges in collaboration with healthcare professionals, and difficulties in ensuring continuity across school levels, particularly in lower secondary education. The analysis of the pedagogical documentation produced by teachers also reveals different ways of integrating the programme into teaching practice. Finally, the University plays a strategic role between the education and health sectors and between initial and in-service teacher education, providing tools and training to support reflective and participatory practices.

FROM GRAMMAR REFLECTION TO ACTIVE CITIZENSHIP: THE EDUCATIONAL IMPACT OF VALENCY GRAMMAR IN ITALIAN SCHOOLS.

Loredana Camizzi (INDIRE, Italy) · **Francesco Perrone** (INDIRE, Italy) · **Valentina Bambini** (IUSS PAVIA, Italy) · **Chiara Battaglini** (IUSS PAVIA, Italy) · **Elena Didoni** (IUSS PAVIA, Italy) · **Chiara Pompei** (IUSS PAVIA, Italy)

Valency grammar | multimodal approach | reasoning

Grammar teaching in Italy has long been characterized by ideological contrasts and pedagogical debates. The X Theses for a Democratic Linguistic Education (GISCEL, 1975) criticized traditional approach focused on norms, correctness and memorization, proposing instead a descriptive, use oriented and metacognitive model. However, this perspective made limited progress in schools as it required greater professional commitment from teachers, most of whom continued to rely on textbooks and the traditional model inherited from classical culture. Recently, the National Guidelines for the First Cycle of Education (MIM, 2025) seem to signal a return to normative, rule-based grammar, also framed to teach students respect for social norms. Grammar remains one of the most difficult and least appreciated areas of study. Analyzing the results of INVALSI tests on grammar questions, Lo Duca (2014) noted that both native and migrant students have diffi-

culty completing tasks that require linguistic reflection, perhaps due to mechanical and decontextualized teaching. Moreover, national and international assessments show a connection between grammatical awareness and reading comprehension. Valency Grammar (VG) offers a response to these persistent challenges. Developed by Tesnière (1959), in the VG the verb is the organizational center of the sentence and attracts other essential elements through a Valence mechanism, explained through chemical and theatrical metaphors. Sabatini's adaptation for Italian (Sabatini 2004; Sabatini et al., 2011) introduced radial stemmas (GRS), which visually represent deep syntactic relations through shapes and colors, making VG particularly suitable for educational contexts. The model aligns with approaches like Colorful Semantics (Bryan, 1997), which use visual cues to support morphosyntactic development, including for learners with difficulties (De Santis & Bambini, 2023). VG promotes linguistic reflection starting from students' implicit grammar (Lo Duca, 2018). Empirical studies (Camizzi eds., 2020) show that VG fosters inquiry-based and collaborative learning and active manipulation and multimodal representation of sentence. Teachers also reported improvements in student learning in metalinguistic reflection and text comprehension and production strategies. To more rigorously verify these perceptions, INDIRE and IUSS launched an experimental study in 2023/24 school year. The design includes a pre-training assessment, a training phase comparing a valency-based grammar curriculum with a traditional one, a post-training assessment and a follow-up 6–12 months later. The research spans all school levels, but this paper focuses on primary school, involving 84 pupils divided into experimental and control groups. A mixed-methods approach (Trinchero, 2019; Teddlie & Tashakkori, 2008) integrates quantitative results with qualitative data from interviews, focus groups, and classroom observations. The data show that, although all students improved their grammar during the intervention, only the VG group also achieved improvements in reading comprehension and metalinguistic awareness. Over time, both groups achieved similar levels, but VG appears to have accelerated learning, helping all students achieve the expected skills sooner. Qualitative evidence explains this effect: in VG laboratories, knowledge is constructed through reasoning, dialogue and multimodal manipulation of linguistic structures, which increases engagement and inclusion. A model of grammar that promotes reflection rather than memorization strengthens text comprehension and critical thinking, essential skills for developing active and conscious citizenship.

REDEFINING EDUCATION IN MARGINALIZED CONTEXTS: INNOVATIVE PRACTICES IN SCHOOL IN CATANIA

Ilaria Piovesan (University of Milan, Italy)

Inclusion | Democratic Hub | Innovative Practices

The metropolitan city of Catania holds the national primacy for school dispersion, with an abandonment rate that interests about 25% of the student population (Istat, 2024).Such percentage intertwines with the finding of insufficient levels of alphabetic and numerical competences, which exceed, for the Catanese student population of secondary schools of first grade, 50%. (Istat, 2024) This scenario inserts itself inside of a system that does not guarantee citizens essential levels of performance (LEP) regarding instruction. Marginalized by national policies, the South is characterized by strong educational disparities. The city of Catania presents itself as the urban version of this national scheme: only 5% of children has the

possibility to attend a communal nest [nursery], only 9% can make use of full time at elementary schools, the schools are often dilapidated and deprived of suitable structures for curricular activities and the formative institutes are hardly reachable by families that do not dispose of a private vehicle because of the scarcity of public transports. (Istat, 2024) To explore how democratic education can be enacted despite these territorial constraints, this study analyzes the experiences of two comprehensive institutes that have implemented innovative practices to contrast segregation and educational poverty. The first institute is located in the neighborhood of Picanello which, influenced by the proximity to the residential zone of the seafront and by areas of elevated economic prestige, features a strong contrast. In this area, the comprehensive institute “Agatino Malerba” has attempted to propose to all its users an accessible and competitive school, seeking to transform a “ghetto” institute, not attended by children of the “well-to-do” Catania, into an attractive one. The projects undertaken are numerous and have from the very start had the objective to involve and change the entire neighborhood, modifying its spaces and rendering it a possible center of aggregation. Furthermore, thanks to the rich, inclusive and free formative offer, the school has become attractive also for those who before refused to attend it, permitting to reduce the levels of school segregation. The second institute is situated in the municipality of Adrano, which is part of the belt of Etnean towns, which, characterized by a heterogeneous socio-economic distribution, are part of the metropolitan area of Catania. The institute “Vincenzo Bascetta” of Adrano has sought in these years the goal to repopulate the empty desks that characterised its classes: to the names present in the list of the enrolled did not correspond, in fact, faces. The principal and the teachers have therefore tried, through a series of projects and laboratories, to attract the pupils providing them, other than a place of learning, a new space of listening and socialization. Both case studies demonstrate that education in marginalized areas requires more than just standard instruction, it demands a structural reorganization of the school’s relationship with its territory. They seem to be of great interest since they aim to contrast the strong educational inequalities that afflict the Catanese metropolitan area

Dialogic Teaching in Education: Practices, Languages, and Conditions for Democratic Learning

PANEL CONVENORS: Serena Goracci (Indire, Italy); Luisa Zecca (University of Milano Bicocca, Italy); Laura Parigi (Indire, Italy); Loredana Camizzi (Indire, Italy)

PANEL KEYWORDS: Dialogic inquiry, classroom discussion formats, collaborative knowledge building

This panel explores dialogic teaching as a pedagogical and curricular orientation capable of sustaining democratic education, understood not as ideological positioning but as daily practice of participation, shared meaning-making, and collective inquiry within educational communities. Drawing on Freire's conception of dialogic pedagogy as an emancipatory process that problematizes reality and nurtures critical consciousness, the panel invites contributions investigating how dialogic learning can become a generator of curricular, cultural, and relational transformation. Dialogic inquiry, classroom discussion formats, collaborative knowledge building, and forms of emergent curriculum constitute powerful devices for structuring democratic encounters in learning environments. However, research shows that educators often experience dialogic interactions as difficult to manage: conversations may appear unpredictable, cognitively demanding, and hard to reconcile with pre-defined curricular expectations. These tensions highlight the need for professional competences, organisational conditions, and design tools that enable teachers to sustain dialogic practices while maintaining coherence with institutional frameworks. Given the central role of language in the vygotskian perspective — as cultural tool, mediator of thought, and potential barrier to inclusion—the panel explores how linguistic repertoires shape participation, agency, and power relations. We invite contributions that address transversal literacies, multilingual contexts, culturally responsive pedagogies, and the role of narrative, disciplinary, and everyday languages in fostering or constraining democratic dialogue. The panel aims to gather empirical studies, theoretical reflections, and practice-based innovations that explore dialogic inquiry as a way to reimagine pedagogical routines, assessment cultures, and curriculum design as spaces of autonomy, participation, and shared responsibility, positioning educational contexts as laboratories of democracy in action.

VALUING, PRACTICING DELIBERATELY OF REGIONAL LANGUAGE VARIETIES AS AN ESSENTIAL DEMOCRATIC ACTOR: THE CASE OF FRENCH-SPEAKING BELGIUM

Corinne Gillon (Haute École de la Ville de Liège, Belgium)

Regional languages | linguistic identities | diaphasic varieties

The legitimization of regional language varieties, advocated today by numerous speakers and specialists (Francart, 2010; Klinkenberg, 2015), is part of an ambitious societal project: to assign linguistic diversity a role as a guarantor of democracy. It posits that, alongside national languages, representative of "nation-states," regional varieties, as well as dialects, deserve recognition because, in this era of globalization, the democratic challenge demands respect for cultural diversity. "We should," says Francart, "perpetuate the use of a language that derives its legitimacy from its capacity to express the plural identity of the societies and individuals that compose it." "Belgian French, Quebec French, Louisiana French, Romansh, Sardinian, Neapolitan, Catalan, and other living variants of national languages embody a civic and political issue: indeed, language mobilizes identity, social, cultural, and educational concerns. Allowing everyone to express themselves fosters pluralistic dialogue and debate. In schools, this issue allows for work on representations and examination of diaphasic varieties and appropriate, deliberate language choices. In French-speaking Belgium, this evolution of attitudes necessitated a guilt-inducing questioning of the hegemony of the French of the Île-de-France region and its essentialist and unitarist definition (Klinkenberg, 2015), constructed by several centuries of idealizing and authoritarian discourse." This process allowed for a disinhibition of "decentralized" Francophone communities with regard to the norm of standard French, and, freed from feelings of linguistic insecurity, they are now claiming liberated, authentic practices in addition to the official national language. Methodologically, the exercise of linguistic awareness as a driving force for the identification and inclusion of regional varieties is essential because it consists, in particular, of "identifying the attitudes and representations that speakers have of their own speech and that of others" and, consequently, of "analyzing all the formal and semantic facets of verbal messages" (Alvarez-Peyrère, 1998). This vigilant reading is attentive to the moral, cultural, ideological, and emotional implications of the utterances. We propose a review of these teaching practices conducted with future teachers.

DIDACTICS OF DISCUSSION AND PROFESSIONAL DEVELOPMENT OF TEACHERS. A RESEARCH-TRAINING PATH IN PRIMARY SCHOOL

Beatrice Carbè (Sapienza Università di Roma, Italy) · **Giordana Szpunar** (Sapienza Università di Roma, Italy) · **Patrizia Sposetti** (Sapienza Università di Roma, Italy)

Teaching strategy of classroom discussion | research-training | primary school

The aim of the communication proposal is to contribute empirical and didactic research to reflection on discussion as a teaching tool for developing critical thinking. Classroom discussion, understood as a strategy capable of generating a space for comparison and negotiation of meanings, plays a fundamental role in processes of shared construction of knowledge (Pontecorvo et al., 2004; Lumbelli, 1982; Czerwinsky Domenis, 2000; Brookfield & Preskill, 2009; Carugati, 1988; Doise & Mugny, 1982). Although several studies have highlighted the value of discussion as a collective knowledge processing device (Pontecorvo et al., 2004; Alexander, 2018; Mercer, 2000), within school contexts, there persists a limited diffusion of teaching activities based on this strategy and aimed at the development of critical thinking (Dewey, 1933/2019; Lipman, 1988). This could be due to a lack of training for teachers in dialogic approaches. Because it is rooted in school contexts, discussion requires teachers to manage communication and dialogue skills (Hennessy et al., 2021; Parmigiani & Gozzi, 2017). In light of these reflections, as part of a PhD in Educational Research at Sapienza University of Rome, a field research project was developed and is currently being implemented in the third-grade classes of a primary school in Rome. The study adopts a multilevel strategy, structured around exploratory investigation processes and divided into sequential phases of observation, design, experimentation, and reflection, a typical approach in research training (Asquini, 2018). This approach is a way to investigate and modify discussion-centered teaching practices and involves integrating, modifying, and testing a conversation analysis device, ODIS, developed and tested in previous research (Zecca, Perucchini & Bertolini, 2025). ODIS was developed to support teachers in conducting and analyzing classroom discussions, in close connection with the educational experience (Bertolini et al., 2022). The research-training program, aimed at promoting an intentional and reflective use of discussion, aims to achieve a shared design, with the primary focus on reworking the tool and experimenting directly with teachers. This device, based on a cyclical process of participatory use and review, allows not only the observation of communication dynamics but also the stimulation of self-assessment and professional awareness in teachers. To this end, the study is divided into phases that include: administering pre- and post-test questionnaires (Fredella et al., 2022); implementing mixed-methods training activities; analyzing transcripts of class discussions; and moments of discussions between teachers and researchers. The ongoing analyses aim to explore how this path can impact the intentional use of classroom discussion as a cognitive and relational mediation practice, as well as the organization of inclusive and participatory learning contexts. Therefore, the research is expected to lead to the development of a framework that supports teachers in reflecting on and improving their teaching practice and fosters a culture of participatory learning in schools. The initial results of the research and training, which will be shared at the conference and subsequently explored through the extended contribution, will concern the observed changes in teachers' communication and reflective skills, as well as the development of an initial version of the new tool.

WEAVING NEW LINGUISTIC PATTERNS AND SPACES AS A COMMUNITY

Liboria Pantaleo (MCE, Italy)

dialoque | creativity | multimodal learning

Cooperative/collaborative methodologies inspired by active teaching methods, the potential of dialogic learning, media communication and high-quality children's literature offer multiple opportunities to work on conceptual mediation with even the youngest children: a powerful tool for understanding, learning, problem solving and the ability to connect ideas and concepts. Stimulating an approach of discovery and cooperative reflection in spaces for dialogue and co-construction of meaning allows for a profound approach to today's textuality. The potential of communication makes it possible to develop creative and multimodal activities capable of responding to the needs of individual pupils, promoting a real pedagogy of emancipation and the conditions for democratic learning. The presentation will showcase experiences conducted in kindergarden and primary schools that can be transferred to other school contexts to document these possibilities.

VOICES IN THE LAB: REIMAGINING THE ITALIAN EFL CLASSROOM THROUGH DIALOGIC INQUIRY AND DEMOCRATIC PRACTICE

Alexandra Covaci (University of Salento, Italy; University of Glasgow)

Dialogic Teaching | EFL Italy | Democratic Pedagogy

This panel contribution addresses the intersection of dialogic teaching and democratic education within the specific context of English as a Foreign Language (EFL) instruction in Italian secondary and higher education. While the Italian "Indicazioni Nazionali" increasingly emphasize transversal competences and active citizenship, the reality of the EFL classroom often remains anchored in transmissive models and "IRF" (Initiation-Response-Feedback) patterns that limit

student agency. Drawing on the panel's core themes, this session explores how Freire's "problem-posing" education can be operationalized in a foreign language context. We argue that the EFL classroom is uniquely positioned to be a "laboratory of democracy" because it requires students to negotiate meaning across linguistic and cultural boundaries. However, this potential is often stifled by the tension between the unpredictable nature of dialogic inquiry and the rigid constraints of the Italian curricolo chiuso. The discussion will be structured around three interconnected dimensions: Practices: How specific discussion formats (e.g., Exploratory Talk, Socratic Circles) can be adapted to the Italian EFL classroom to shift power dynamics from teacher-led to student-owned inquiry. Languages: An analysis of how the English language acts as both a tool for emancipation and a potential barrier. We examine how "translanguaging" and the use of everyday repertoires can support inclusion in multilingual Italian school settings. Conditions: A reflection on the professional competences and organizational "spaces" required for Italian teachers to sustain dialogic practices without abandoning institutional assessment requirements. By presenting a mix of theoretical reflections and practice-based innovations—such as the transition from "correctness-focused" to "meaning-focused" assessment—this panel aims to demonstrate how dialogic teaching can transform the EFL classroom from a site of passive consumption into a space of shared responsibility and collective critical consciousness.

SEEING TOGETHER, EXPERIENCING TOGETHER, THINKING TOGETHER: CIVIC EDUCATION THROUGH THE COLLABORATIVE EXPLORATION OF IMAGES

Evelina Ivanova-Vardzhiyska (Sofia University St. Kliment Ohridski, Bulgaria)

civic education | collaborative learning | innovation in education

Contemporary approaches to civic education increasingly emphasise learning democracy as a lived and collaborative experience rather than as a purely conceptual domain of knowledge. Within this perspective, educational practices that foster dialogue, shared inquiry, and the interpretation of multiple perspectives play a crucial role in developing democratic competences. This paper presents the results of the School Innovation Lab "Educational Integration and Civic Education", developed within the national project "Innovation in Action" initiated by the Bulgarian Ministry of Education. The lab focused on designing and testing an innovative cooperative learning model based on the collaborative exploration of visual images in educational contexts. The proposed model uses images as a starting point for collective observation, interpretation, and dialogue. Through structured collaborative activities, students are encouraged to see together, share experiences and perspectives, and gradually construct meaning through discussion and reflection. In this way, working with images becomes not only an aesthetic or interpretative exercise, but also a pedagogical pathway for developing key democratic competences such as perspective-taking, argumentation, empathy, and participation in shared inquiry. The paper outlines the theoretical foundations of the model, describes the stages of its development within the innovation lab, and presents a set of ready-to-use instructional activities applicable across subjects and educational levels. It thus contributes a transferable pedagogical model demonstrating how the collaborative exploration of images can support interdisciplinary approaches to civic education and foster democratic learning practices in diverse educational contexts. Through the collaborative exploration of images, students do not simply analyse visual material; they engage in a shared process of inquiry in which democratic learning unfolds as seeing together, experiencing together, and thinking together.

Dialogic Teaching | Conceptual Progression | Action Research

This paper highlights the crucial importance of cooperative dialogic teaching as both a method and a philosophy of life for fostering scientific understanding among all students and for supporting the development of communities grounded in mutual respect and democratic citizenship. Through conceptual progression and research-validated strategies, dialogic teaching enables inclusive access to scientific reasoning. Since language is one of the primary vehicles for learning, we propose an educational pathway in which dialogue (primarily oral but sometimes mediated through writing) is not merely "communication", but a pedagogical tool that fulfills a fundamental mission of schooling: promoting the recognition and acceptance of others through the practice of "thinking together". The pedagogical and didactic approach guiding the action-research of the Le Parole della Scienza group in Turin is grounded in meta-research and evidence-based studies (the BEST project coordinated by Judith Bennett, which translates STEM education research into classroom practice; the Dialogic Teaching framework developed by Neil Mercer and Robin Alexander; the Diagnostic Formative Assessment approach proposed by Dylan Wiliam and Paul Black; Cooperative Learning and structures developed by Spencer Kagan, INDIRE). A distinctive feature of the group is its nature as a vertical community of practice, bringing together teachers from all school levels, from early childhood to secondary education. This vertical collaboration is the group's main strength, allowing teachers to jointly design learning experiences and reflect on conceptual progression across the educational pathway. The experiences presented here are not isolated classroom activities, but the result of collective cooperative and dialogic work validated through collegial reflection and international research evidence. As an example of this hybrid approach, we present a vertical case study with students aged 5 to 16. The case illustrates didactic transposition and conceptual progression through experimental activities on candle combustion. In early childhood and the first years of primary school, the investigation focuses on qualitative aspects in open and closed systems . Students formulate predictions, observe, engage in explanatory dialogue, and develop initial explanations. In lower and upper secondary education, the pathway develops toward formal understanding of mass conservation (Lavoisier's law). Using digital balances, students test hypotheses and explore the phenomenon quantitatively, revealing misconceptions and naïve ideas that become starting points for deeper investigation, cognitive conflict, and conceptual restructuring. Dialogic teaching, based on reciprocal feedback between teachers and students, supports the remediation of learning gaps, the correction of misconceptions, and the consolidation of conceptual understanding. The approach integrates structured exploratory talk (Mercer), collaborative strategies such as Think–Pair–Share and Think–Pair–Square, systematic wait time, and response systems suitable for younger children. Techniques including Predict–Observe–Explain (POE), Confidence Grids, and Talking Heads make thinking visible and socially shared. Overall, this work illustrates how dialogic teaching can support conceptual progression in STEM across school levels while simultaneously fostering social and communicative competences. Beyond its cognitive benefits, it promotes inclusive, reflective, and democratic classroom communities, responding to contemporary challenges of indifference and social isolation.

DISCUSSION AS A TOOL FOR STEAM LEARNING IN ECEC. REFLECTIONS AND EXAMPLES FROM THE SCUOLA BAMBINI BICOCCA

Antonella Pezzotti (Fondazione Bambini Bicocca Impresa sociale, Italy) · **Michela Pontina** (Fondazione Bambini Bicocca Impresa sociale, Italy) · **Sara Castellani** (Fondazione Bambini Bicocca Impresa sociale, Italy)

ECEC discussion scientific learning

The scientific attitude is a fundamental condition for applying the methods of inquiry and research and is therefore considered a disposition to be fostered from early childhood through empirical experiences (Dewey, 1938) aimed at understanding the world, living beings, and scientific phenomena building on children's innate curiosity (Larimore, 2020). However, offering young children the opportunity to approach STEAM disciplines education does not mean transmitting the first rudiments of scientific disciplines; rather, it entails nurturing their tendency toward exploration (Mantovani et al., 2016). Cultivating a scientific attitude, therefore, involves establishing a research habitus characterized by innate curiosity, reflective thinking, and both self- and hetero-guided problematization. In this sense, learning should be considered a multidimensional phenomenon (Wertsch, 1991) strongly favored by methodological approaches based on the active involvement of children, inquiry-based learning (Zecca, 2016; Brookes et al., 2020; Eti I., Sigirtmac A., 2021), guided participation. Within this framework, the adult assumes a central role as a guide to exploration, observation, and participation (Rogoff, 2006), while at the same time acting as a model in the research process. Thus, the adult is one who "does not know in advance" but who explores, searches, investigates, and learns together with the children (Mantovani et al., 2016) and who, after inviting them to share their interpretations, welcomes and extends their reflections as much as possible, accompanying the group in structuring more advanced and complex forms of argumentation. In light of the above, within a perspective in which the social dimension is considered significant in the learning process (Bembich, 2024), this paper aims to investigate some aspects concerning interaction, both between adults and children and among peers. Specifically, it offers reflections on the value of discussion for the co-construction of meaningful scientific learning in ECEC. To achieve these aim, an action research study (Lewin, 1946) was conducted at the Scuola Bambini Bicocca, where STEAM subjects are one of the main focuses of the educational project. Different scientific-naturalistic activities were offered to the children (age 3-6) of both classes in the school, divided into small mixed-age groups. Some discussions led by scientific atelierists and/or teachers were recorded and analyzed using ODIS (Zecca et al., 2025). An initial analysis of the data has revealed interesting insights into the level of understanding achieved by the children – guided by the adults - on the topics treated and the richness of the reflections has emerged thanks to the heterogeneity of the groups and the different specificities, knowledge, and skills of the children.

DEMOCRATIC CONNECTIVISM THROUGH DIALOGUES IN COLLABORATIVE ONLINE INTERNATIONAL LEARNING (COIL): AN EMPIRICAL CASE STUDY AT ITALIAN AND US UNIVERSITIES

Tunde Szecsi (Florida Gulf Coast University, United States of America) · **Debra Giambo** (Florida Gulf Coast University, United States of America) · **Marianela Rivera** (Florida Gulf Coast University, United States of America) · **Flavia Stara** (University of Macerata, Italy)

COIL | multimodal communication | meaning-making

Amidst rapid and tumultuous changes in social, political, and educational contexts, professors may design and implement pedagogical innovations to promote democracy in education. This presentation discusses outcomes of Collaborative Online International Learning (COIL) projects through the connectivism theory, focusing on students in Italy and the United States (Florida) using multimodal communication tools for meaning-making, multilingual dialogues on critical societal self-selected topics. In this study, meaning-making is understood as a relational and dialogic process (Freire, 2000) through which students interpret experiences and negotiate understanding in interaction with others. From a sociocultural perspective, meaning emerges through mediated dialogue rather than in isolation (Vygotsky & Cole, 1978), often fortified with multimodal communication tools, such as images, written texts, oral expressions, and auditory messages (Kress & Bezemer, 2023). Connectivism theory offers a framework for understanding knowledge construction across networks of people, ideas, digital tools, and information sources (Bates, 2022; Siemens, 2005). From this perspective, learning is understood as a relational and networked process that aligns with COIL, an innovative pedagogical approach that facilitates dialogic inquiry, international collaboration, and shared meaning-making around complex societal issues (Rubin & Guth, 2022). Because perceptions of societal issues are shaped by individuals' cultural, political, and economic backgrounds, international dialogues can open windows into interpretation and understanding across contexts. To promote college students' critical thinking and global and interlingual competence for societal transformation, we designed an interdisciplinary COIL project between Italian students majoring in tourism and students in Florida majoring in education. To share with their partner, each student developed a multimodal presentation on a self-selected topic such as democracy, power, accessibility to resources, education, demographic and social trends. Subsequently, teams of two students collaboratively facilitated a series of synchronous, virtual dialogues, including linguistic negotiation that highlighted the role of multilingual repertoires in shaping participation, especially for predominantly monolingual US students. Dialogic learning concluded with individual reflection and in-class discussions about democracy. Empirical analysis of the multimodal dialogues indicated the connection between students' topics and the Sustainable Development Goals (SDGs) (United Nations, 2015). Given participants' different cultural, linguistic, and experiential backgrounds, it is significant that the thematic analysis of students' self-selected topics (Creswell & Poth, 2013; Kress & Bezener, 2023) showed a shared interest and connection to educational and societal issues, such as race, ethnicity, poverty, gender in education, educational rights, politics and perspectives in higher education, and the vulnerability of women in society. In addition, the analysis of students' discourses in terms of negotiating meaning-making about democratic issues showed the use of multimodal communication, e.g., narrative, visual and auditory modes. The context of such interpretive dialogue on relevant social narrations included individual stories and descriptions of everyday life, private lives, work experiences, community life, supporting data, and policies, along with representations of exclusion and marginalization. The increased

awareness of cross-border historical and geographic contexts became intertwined with empathy and emotional insight, resulting in rich, multifaceted perceptual transformation regarding social dynamics, and linguistic expressions. This study offers validation for the benefits of dialogic interdisciplinary learning across cultures and languages.

USING DISCUSSION AND ODIS IN SCIENCE TEACHING: ACTION RESEARCH IN A PRIMARY CLASSROOM

Lara Didonè (Università degli Studi di Milano Bicocca, Italy)

discussion | dialogic teaching | participation

This abstract presents the results of an action research study conducted in a third-grade primary class. The research-training project originated in a thesis developed within the Primary Teacher Education degree program and was later pursued by the teacher-researcher in her professional context. The study explored the implementation of dialogic teaching practices in science education through the use of structured classroom discussion and ODIS (Discussion Observation), a tool for analyzing dialogic interactions (Zecca, Perucchini & Bertolini, 2025). The research originated from the intention to move beyond a transmissive approach to scientific knowledge and instead promote a learning environment in which knowledge is democratically constructed and shared through dialogue among students and between students and the teacher (Pontecorovo, Ajello, Zucchermaglio, 1998, p. 184). The main objective of the study was to investigate the effectiveness of discussion as a pedagogical tool for fostering active participation and eliciting students' prior knowledge about natural phenomena. In particular, the research examined how discussion can support the negotiation of meaning, the formulation of collective hypotheses, and the transformation of disagreement into a cognitive resource, thereby promoting deeper and more durable understanding of scientific concepts through the co-construction of knowledge. A further objective was to explore the formative potential of the ODIS coding process for the teacher, encouraging reflective practice and supporting the intentional design of classroom discussions. The action research was conducted over a three-month period. After selecting specific scientific topics, the teacher initiated classroom discussions based on open problem questions (Ripamonti, 2016). Data were collected through audio recordings of the discussion sessions, which were subsequently transcribed and analyzed using the ODIS coding framework. The findings indicate that dialogic practices reduced students' fear of making mistakes and encouraged participation, including from those who were usually less inclined to express their ideas. The discussions contributed to transforming the classroom into a community of inquiry in which students learned to question assumptions, support claims with evidence, and develop more structured forms of reasoning. Scientific knowledge emerged as a collectively negotiated and provisional understanding, while error was reframed as a productive element in the process of knowledge construction. The analysis also enabled the teacher-researcher to reflect on the communicative dynamics of both students and teacher intervention, fostering an increasingly solid awareness of the educational intentionality underlying the pedagogical choices implemented (Zecca. 2012). Overall, the study highlights the importance of authentic dialogic practices in primary science education. Classroom discussion functions not merely as verbal interaction but as a central mechanism for the active, democratic, and shared construction of knowledge, fostering both conceptual understanding and the development of critical and participatory citizenship.

AN APPROACH TO CHILDREN'S AND YOUNG ADULT LITERATURE DIDACTICS: TEXTS, DIALOGUE AND COOPERATIVE LEARNING.

Maria Chiara Mattacchione (Università degli Studi Roma Tre, Italy) · **Susanna Barsotti** (Università degli Studi Roma Tre, Italy) · **Amalia Lavinia Rizzo** (Università degli Studi Roma Tre, Italy)

Children's and Young Adult Literature | CIRC® | Middle School

Reading practice at school is a central activity in every student's development: encounters with texts prompt and encourage the learning of stories, the pleasure they derive, reflection, and dialogue. Middle school is a significant stage in exploring the multiplicity of literary genres; in this specific segment of the first cycle of education, the process of linguistic and literary education is mediated, in the usual teaching method, by school anthologies. These—through a careful selection of authors and texts deemed representative [1] —serve as a stimulus for the discovery of textual variety, contribute to the growth of personal skills, and foster moments of dialogue and exchange with adults and peers. By selecting and offering quality readings [2] and equipping students with appropriate linguistic and methodological tools, it is possible to make encounters with texts no longer a compulsory practice [3], but rather an opportunity to experience «an infinite possibility of inhabiting, of looking, and of being looked at»[4]. The currently anthologies highlights the presence of numerous children's classics, «written both 'for' the growing subject and unintentionally addressed to them» [5]. This literature, "youthful" by virtue of the characteristics of its audience, is an «essential resource for education, literacy development, and socialization»[6] and necessarily requires reflection on the characteristics of the subject for whom it is addressed: «a subject in the crucial years of formation, with their tastes and interests, their overall linguistic, cognitive, and experiential immaturity, their fragilities and vulnerabilities, their educational needs»[7]. The literary and linguistic complexity of the works on offer—which do not always correspond to adequate levels of proficiency[8] —calls for educational research to rethink the practices through which teaching is structured, in order to ensure equitable and inclusive learning conditions. This paper presents the initial results of a trial using Cooperative Integrated Reading and Composition® (CIRC®)[9] for reading anthologies in middle school. The research aims to investigate how a cooperative approach, strongly characterized by dialogic practice, can facilitate access to literary texts, increasing oral and written comprehension and reworking skills. Using this methodology, students work on texts, clarifying less clear passages through guided discussion; they identify key information, draw conclusions, complete writing exercises, and compare and contrast ideas [10]. The teacher acts as a discreet mediator, guiding group reflection and encouraging students to engage in discussion about the text.

TRAINING FUTURE TEACHERS FOR CLASSROOM DISCUSSION: A LESSON-STUDY-INSPIRED PRACTICUM WITHIN THE "TALKING TO LEARN" PROJECT

Andrea Zini (Università degli Studi di Modena e Reggio Emilia, Italy)

Dialogic Teaching | Teacher Education | Lesson Study

Empirical and experimental research across curricular areas and school levels has shown that classroom discourse approaches which reduce the predominance of recitation and give a greater role to productive dialogue and discussion can support the learning of all students, including those experiencing sociocultural disadvantage (e.g., Alexander, 2018). However, classroom discussion intentionally orchestrated as collective reasoning around an object of knowledge (Pontecorvo, 2021) is still rarely observed in ordinary school settings. Even teachers who aim to promote it may struggle to position students as reasoners rather than "guessers of the right answer" (O'Connor & Michaels, 2019), while also attending to comprehensibility, coherence, conceptual accuracy, motivation, and equity of participation. As Ajello argued (2004), the teacher's role in this kind of discussion is neither natural nor spontaneous, but a specifically professional competence to be acquired. This paper presents a practice-based teacher education initiative developed within Talking to Learn (T2L), an interdisciplinary research project funded by the 2025 University Research Fund at the University of Modena and Reggio Emilia. T2L aims to bridge the gap between research and school practice by providing both in-service and pre-service teachers with a teacher-led, research-informed model of professional development, supported by a repertoire of agile resources for planning, observing, analysing, and improving the quality of classroom discussion. A central assumption of the project is that wider dissemination of dialogic teaching depends on making discussion a shared object of professional inquiry among teachers themselves (Zini, 2024). Its methodological framework builds on more than a decade of research at UNIMORE on Lesson Study (Bartolini Bussi & Ramploud, 2018), its discussion-focused development, Discussion Study (Bertolini et al., 2023), and ODIS, a coding scheme for classroom discussion observation (Zecca et al., 2025). The contribution focuses on a lesson-study-inspired practicum module designed for student teachers in the Primary Teacher Education programme, scheduled for implementation in the first semester of the next academic year. The module is intended to support future teachers' professional autonomy in designing and conducting effective classroom discussions for mediating curricular content. It is organised around a cycle of mentor and student preparation, co-design with school mentors, classroom enactment, audiovisual documentation of a key discussion episode, and guided reflective analysis of the activity in relation to intended learning goals. In this perspective, the practicum does not simply train participants to "use discussion", but inducts them into a collaborative, inquiry-based model of professional learning in which teaching can be collectively planned, observed, discussed, and revised. Rather than presenting a fully standardised package, the paper discusses the rationale and formative architecture of a practicum model designed to make discussion teachable, observable, and professionally discussable within the ordinary constraints of school life. Its relevance to democratic education lies both in preparing future teachers to treat classroom talk as a shared epistemic space and in exploring forms of teacher-led professional learning that may support the broader circulation of dialogic practices across educational contexts.

"RISE! – VOICES AND BODIES OF DEMOCRACY": WHEN A PERFORMANCE BECOMES A PRETEXT FOR DISCUSSION AT SCHOOL

Mariangela Scarpini (University of Parma, Italy)

Dialogic Teaching | gender equality | School-work alternation

This paper presents a research conducted as part of a program for the development of cross-curricular skills and career guidance (PCTO): SORGETE! – Voices and Bodies of Democracy. The project's title refers to the dance-theater performance directed by Simona Lisi and produced by Collettivo Collegamenti, which was used as a starting point to explore issues related to gender equality. The theatrical performance, in fact, centers its reflection on the story of the ten Italian female teachers who, in 1906, temporarily obtained the right to vote, inspired by Maria Montessori's proclamation, "All women, rise up!" The project establishes a network of schools, research institutions, and cultural organizations. It is carried out with the support of the European DEAR program—Development Education and Awareness Raising—as part of the GEAR UP! project (NDCI Challenge /2023/448-378), co-funded by the European Union. Promoted by Welcome APS – European Projects Collettivo Collegamenti, with the support of the Regione Marche. The research sample involves two fourth-year classes (4AT and 4BT) at the "Giulio Perticari" Classical High School in Senigallia (An), specializing in the Humanities track. 1. The preparatory phase of the project involves presenting the content through workshops on issues related to gender equality. 2. Preparation for the play "Sorgete Donne", 3. Viewing of the play, used as a starting point for classroom discussions on the themes of democracy, gender equality, civil rights, and active participation. 4. The Human Sciences classes will participate in a series of 4 sessions over 4 weeks, for a total of 10 hours distributed as follows: four hours of presentation of methodological tools specific to facilitating Philosophy for Children (hereinafter P4C) sessions, with particular reference to mirroring, non-judgment, and active listening, four hours of P4C sessions and two hours of planning a P4C session to be offered to groups of 6 fifth-grade students at the Mercantini Elementary School in Senigallia (An). The research question This exploratory research begins with an analysis of the facilitator's interventions, asking whether and how the facilitator's questions or interventions support discussion, the expression of divergent thinking, reflection, and conversation. Other elements that are part of democratic education will be taken into consideration, such as: active participation of individual group members (for example: do group members participate actively?); depth of arguments (are arguments used that demonstrate cognitive decentralization?), quality of alternative, novel, and non-conformist proposals, increasing progressively from the first to the fourth meeting and the evolution of cohesion within the research community. Research tools: Participants will be asked to complete a logbook at the end of each meeting. At the conclusion of the program, a focus group will be conducted, in which participants will participate voluntarily. The sessions, which will be fully recorded and transcribed, will be analyzed according to the guidelines from Gail Jefferson's system (2004) and analyzed using a discourse analysis approach (Mantovani, 2008)

SINGING THE DIALOGUE: MUSICAL LANGUAGES AND COLLABORATIVE MEANING-MAKING AS A TOOL IN MULTICULTURAL L2 CLASSROOMS

Eleonora Betti (Università degli Studi di Roma Tor Vergata, Italy)

Dialogic Teaching | Collaborative Meaning-making | Multilingualism

This contribution presents the findings of a holistic, interdisciplinary approach integrating music and second language acquisition. Grounded in the Italian educational context, this research aligns with the European perspective on policies for the inclusion of newly arrived students (CoE, 2022). It examines the potential benefits of music, song, creative and playful activities to second language acquisition, emotional well-being, and motivation (Sun, Yang, & Liang, 2024; Caon, 2023;

Crawford, 2019; Denzine & Brown, 2015). Central to this approach is the perspective of language as a cultural tool and mediator, where music acts as a bridge to overcome linguistic barriers and foster dialogic inquiry. Through a series of cooperative activities and layered processes, students collaboratively negotiated and composed new lyrical sections for the proposed songs, which they also performed. This process turned the classroom into a space for collaborative meaning-making, where the author's original teaching materials were adapted to students' characteristics, learning objectives, and guiding themes. The methodology emphasizes the teacher-student relationship (Wentzel, 2016), the role of emotions (Swain, 2013), and the use of cooperative learning strategies (Munoz-Martinez, Monge-Lopez, Torrego Sejo, 2020) to enhance student agency. This study primarily uses a design-based research approach. Four case studies were conducted with lower secondary school students (ages 12–14), including groups of newly arrived students and multicultural/multilingual classes (15–22 students per group). Data collection involved audio-video recordings, participant observation, questionnaires, and interviews. Analysis, including transcription, coding, and thematic analysis, revealed the positive impact of music and creative activities on L2 development, emotional well-being, and motivation In a social context where migration is both a present and future phenomenon, continuously evolving, the promising results of this study underscore the importance of further research into how music education can contribute, through innovative strategies, to the development of a democratic and inclusive education.

Educators as Agents of Change: Enacting Transformative Education in Practice

PANEL CONVENORS: Luisa Conti (University of Jena, Germany); Paolo Bonafede (Università degli Studi di Trento)

PANEL KEYWORDS: Transformative Education, Democratic Education, Innovative Pedagogy

Transformative Education (TE) offers a critical lens for rethinking education in the context of postdigital societies confronted with accelerated change and an enduring permacrisis. It aims to support the development of those knowledge, attitudes and skills that enable learners to align their decisions and practices with socio-ecological sustainability and global justice. In the context of SDG 4.7, TE can be understood as an umbrella that weaves together the diverse "educations for" – sustainability, human rights, gender equality, peace, cultural diversity and global citizenship – and calls for coordinated efforts capable of advancing systemic transformation. Although this vision is anchored in the SDGs, it has not yet been realised at scale, even if promising examples exist. This panel therefore asks: How can TE be enacted so that learners are enabled to become citizens who actively promote a sustainable transformation of society? This panel builds on the Villa Vigoni colloquium on TE and foregrounds the pivotal role of educators as agents of change, exploring how they can be supported in recognising and enacting this role. It invites scholars as well as representatives of educational institutions – such as school leaders, teachers, educators and students – to contribute theoretical perspectives, empirical research findings and practice-based case studies to an informed exchange on how to implement transformative education in formal, non-formal and informal educational contexts. To accommodate different kinds of expertise and contribution styles, the panel format is deliberately open. We welcome paper presentations as well as more interactive formats such as ignite talks, fishbowl discussions, workshops.

THINKING TOGETHER – CRITICAL REFLEXIVITY TO STRENGTHEN DIVERSITY-SENSITIVE COMPETENCES IN TEACHER EDUCATION

Julia Dr. Ha (PH St.Gallen, Switzerland)

critical reflexivity | forced migration | teacher professionalization

The cross-border, hybrid teaching project Thinking Together, developed by the Universities of Teacher Education St.Gallen (Switzerland) and Vorarlberg (Austria), addresses the urgent need to strengthen diversity-sensitive competences in pre-service teachers. By focusing on critical reflexivity, the project empowers future educators to navigate the complexities of forced migration and inclusion in increasingly diverse classrooms (Barsch, 2017). Building on existing mentoring and summer school programs, where students support newly arrived or refugee pupils, Thinking Together integrates structured reflection sessions guided by interdisciplinary experts (e.g., critical race theory, multilingualism, trauma studies, migration). These sessions encourage participants to critically examine their professional roles, personal biases, and the societal power structures shaping education. Reflection is conceptualized as a dynamic process—bridging reflection-on-action and reflection-for-action (Christof, 2022)—to foster an attitude of continuous self-assessment and perspective-taking. Forced migration serves as a catalyst for exploring broader issues of inequality and social justice in education. The project's interdisciplinary approach (Boix Mansilla, 2010) enables students to synthesize diverse perspectives, addressing educational challenges that transcend disciplinary boundaries. Completed in late 2025, the project's impact was evaluated through a self-assessment tool targeting five key themes: asylum/forced migration, multilingualism, trauma/empowerment, school social work, and anti-racism. Preliminary findings (n=20) indicate significant growth in participants' perceived knowledge across all areas, as measured by pre- and post-program questionnaires. Focus group discussions further illuminated the program's transformative potential from multiple viewpoints. At the conference, we will present these evaluation results and discuss how critical reflexivity can advance inclusive teaching practices in contexts of migration and diversity—contributing to broader dialogues on democracy, equity, and education.

EMPOWERING EDUCATORS AS AGENTS OF CHANGE: A TRANSNATIONAL ECOSYSTEM FOR TRANSFORMATIVE AND DEMOCRATIC SCHOOLING

Daniela Ferrari (University of Trento, Italy) · **Tiziana Faitini** (University of Trento, Italy) · **Giuseppe Zorzi** (University of Trento, Italy) · **Michele Nicoletti** (University of Trento, Italy)

Transformative Education | Teacher Agency | Educational Ecosystem

This contribution addresses the panel's focus on educators as agents of change by proposing an institutional ecosystemic model of Transformative Education (TE) developed at the University of Trento. Building on transformative learning theory (Mezirow 2000) and education for sustainable development (Vare and Scott 2007), we situate TE within a 'postdigital' society characterized by 'permacrisis' – from climate emergencies to democratic backsliding – in which education is increasingly called upon to cultivate critical, participatory, and justice-oriented forms of citizenship. While policy frameworks such as the UNESCO's 2024 Recommendation on Education for Peace, Human Rights and Sustainable Development (UNESCO 2024) and SDG 4.7 call for the integration of global citizenship, sustainability, and democratic engagement into formal education systems, educators often lack the institutional conditions necessary to align their practice with these expectations. Moving beyond 'soft' approaches to global citizenship education (Andreotti 2006), we argue that teacher agency cannot be sustained as an individual disposition alone. Instead, we see it embedded within an ongoing cycle of continuous professional development and transnational practice, supported by institutional structures that enable teachers to act as agents of change. Our analysis focuses on the interplay between two European initiatives: GrACE – Green Europe: Active Citizenship and the Environment (GrACE, 2023–2026) and Schools beyond Regions and Borders (SBRB, 2021–2026). We conceptualize these not as separate projects, but as a circular ecosystem linking theoretical reflection, professional development, and transnational civic practice GrACE functions as the theoretical hub, offering educators cyclical webinar programmes and residential intensives focused on the environmental humanities, climate justice, European policy, and the psychology of the climate crisis. It also equips them with transformative methodologies – ranging from systems thinking to media literacy, from Philosophy for Children to structured debate – while explicitly positioning the teacher as a 'climate citizen' and political subject. SBRB serves as the 'living laboratory' where these competences are enacted. By connecting secondary schools across Europe in sustained collaboration, it enables teachers to operationalize their training in real-world, multilingual, cross-border contexts. Within this framework, teachers move beyond content delivery to co-design teaching materials, facilitate structured dialogue, and guide students in critical discussions on themes such as gender equality, social media literacy, sustainability, constitutional democracy, and peacebuilding. We argue that the iterative movement between theoretical reflection (GrACE) and transnational practice (SBRB) constitutes the enabling condition for sustaining the 'educator as agent of change'. This ecosystem allows teachers to experiment with bold, innovative pedagogies in a supported environment, transforming the classroom into a space of active democratic participation. We highlight how connecting local educational pacts with European networks helps educators overcome the paralysis often associated with global crises, fostering a sense of professional efficacy and transnational solidarity. Drawing on multiple sources of evidence – teacher questionnaires, collaboratively produced lesson plans, teacher feedback on project-designed materials, and student-created artifacts – we identify the institutional and pedagogical conditions required to sustain such an ecosystem. We conclude by offering this model not as a project-based intervention, but as a scalable institutional framework for embedding TE within formal schooling systems.

UNDERSTANDING TRANSFORMATIVE EDUCATION THROUGH INVISIBLE PEDAGOGICAL MINDSETS IN INDIAN CLASSROOMS

Sudeshna Roychoudhury (Dream a Dream, India) · **Joseph Thomas Rijo** (Dream a Dream, India) · **Sreehari Ravindranath** (Dream a Dream, India) · **Apoorva Bhatnagar** (Dream a Dream, India) · **Amit V Kumar** (Dream a Dream, India)

Invisible Pedagogical Mindsets | Teacher Agency | Postcolonial Pedagogy

Transformative education cannot be reduced to curricular reform or progressive policy articulation; it is realised through the everyday pedagogical judgments, ethical orientations, and relational practices of educators operating within historically structured systems. Grounded in a theory of transformative education that recognises schooling as inherently political (Mayo, 2003), this paper advances the concept of Invisible Pedagogical Mindsets (IPMs) as a framework for understanding how educators enact, mediate, or reconfigure reform aspirations into democratic and transformative classroom practice. IPMs refer to the historically sedimented interplay of culture, local education ecosystems, and dominant learning theories that tacitly govern pedagogical decision-making. Conceptually, IPMs extend democratic education scholarship by shifting attention from formal policy design and institutional structures to the epistemic and relational substrata through which authority, knowledge, and legitimacy are interpreted in classrooms. In the postcolonial Indian context, successive layers of textbook dependency, marginalisation of indigenous epistemologies, and market-oriented standardisation have crystallised into everyday assumptions teachers hold about teaching, learning and their own professional identity. These mindsets hold a language of critique (Giroux, 1985) where systemic analysis ties educational reform to structurally conditioned forms of oppression, exposing the contradictions concealed beneath dominant, hegemonic discourse. Without attending to these invisible substrates or IPMs, transformative aspirations risk being absorbed into compliance-driven routines rather than enacted as dialogical practice (Thomas, 1991). Drawing on the Strengthening Pedagogical Approaches for Relevant Knowledge and Skills (SPARKS) project, developed by Brookings Institution, this study examines qualitative data from semi-structured interviews and focus group discussions with teachers, teacher educators, and policy actors across four Indian states, namely, Uttarakhand, Telangana, Jharkhand, and Goa. The study interrogates the tension between the transformative vision of India's National Education Policy 2020 and the lived realities of schooling. While participants describe structural constraints, performative accountability pressures, and limited institutional recognition, they also demonstrate situated agency in reworking dominant pedagogical logics. The findings show that transformative education is enacted through micro-relational practices that subtly reconfigure power within classrooms. Teachers cultivate psychologically safe spaces, embed dignity and inclusion into everyday instruction, and redefine educational success in ethical and civic terms. These practices resonate with Freire's (1970) dialogical pedagogy and Giroux's (1985) language of possibility, illustrating how educators function as democratic actors who negotiate and contest hegemonic reform narratives from within. By foregrounding IPMs as the analytic hinge between structure and agency, the paper argues that transformative education must be understood as praxis emerging through educators' situated interpretation of reform, answering Mayo's (2003) question "with whom does the agency for social transformation lie?" Systemic change, therefore, requires not only policy mandates but the democratisation of pedagogical authority, the legitimisation of relational and care-centred practice, and the creation of collective spaces for reflective inquiry. Transformative education, in this account, is not delivered through reform; it is enacted through educators' capacity to reinterpret inherited pedagogical mindsets toward more just and dialogical forms of schooling.

STORED IN THE BODY: EMBODIMENT, POWER AND TRANSFORMATIVE LEARNING IN ADULT EDUCATION

Virginia Signorini (University of Milano, Italy)

embodied learning | transformative education | adult migrant learners

Building on discussions from the Villa Vigoni colloquium on Transformative Education, this paper examines adult education in migratory contexts, arguing that meaningful transformation requires attention to both structural conditions and embodied experience. Adult learning for people with migratory backgrounds is often marked by profound ontological questions about how to make sense of the world and (re)imagine possible selves (Morrice 2012). These processes can be disruptive, involving the unlearning of taken-for-granted assumptions and deep reconfigurations of identity within hostile or uncertain conditions. A transformative learning approach should recognise this contextual complexity and its contradictions, including possible impacts on identity and self-concept, to remain attentive to the full range of learning experiences. It is important to acknowledge that not everyone has equal access to "windows of opportunity" for transformation, since these chances are often limited by social, cultural, and personal circumstances (Batacharya 2018). Nonetheless, for those whose lives have been marked by violence or worn down by the hardship of everyday life, the prospect of “feeling better” is both meaningful and politically significant (Ahmed 2004). Transformative education thus relies on learning environments that support and validate even small steps toward improved well-being, while acknowledging the complexity of contexts. This paper foregrounds embodied learning as an essential transformative approach in education, focusing on adult learners with migratory backgrounds. Based on Roxana Ng’s theoretical framework (2000, 2011), this perspective demonstrates that power dynamics - including racism, sexism, and colonialism - are embedded not only in conceptual domains but also within the body. The body serves as a locus for the production, contestation, and possible transformation of knowledge. In Ng’s view, embodied learning extends beyond cognitive critique; it can make visible the everyday reproduction of dominant-subaltern relations and create possibilities for change. Embodied work, therefore, is integral to transformative education because it links critical reflection with emotional and physical transformation. Drawing on fieldwork in diverse adult refugee education and training settings, this paper develops theoretical and practical insights from interviews and collaborative work with educators. Attention is given to their embodied perspectives and practices: how they arrange rooms and position tables, when they choose to speak or remain silent, how their bodies relate to learners’, and how they attend to breath. The analysis demonstrates that embodied practices play a vital role in transformative education by converting fragmented learning environments into spaces that promote well-being, critical reflection, and collaborative learning. These practices become increasingly significant - and often more challenging to maintain - when learning takes place online. Given the focus on embodiment and the interactive nature of the panel, the presentation will not only involve listening and watching slides, but also a brief photo-elicitation activity that invites self-reflection on bodies in relation to what the images evoke, in dialogue with key concepts from Ng’s framework. This aims to make abstract ideas more tangible and to open a shared reflection on embodied transformative education in adult (migratory) contexts, as well as directions for further embodied research.

STUDENTS AS AGENTS OF CHANGE? TRANSFORMATIVE EDUCATION IN DEMOCRATIC SCHOOLING

Luisa Conti (University of Jena, Germany) · **Julian Conti** (Free School Leipzig, Germany)

democratic school | students' agency | transformative education

This contribution examines how transformative education is enacted in practice from the perspective of students attending the Free School Leipzig, a democratic school connected to the European Democratic Education Community (EUDEC). Situated within current debates on transformative education, democratic schooling, and pedagogical innovation, the paper focuses on learning in a setting where participation in formal learning activities is not compulsory. The contribution is based on a participatory qualitative study developed together with a young student from the school, who will conduct peer interviews and focus groups with fellow students at the Free School Leipzig and do participatory observation in a democratic school in Canada. This design is not only methodologically appropriate for accessing students' perspectives, but also conceptually coherent with scholarship that understands education as a dialogic, democratic, and transformative process. Dialogic and facilitative approaches emphasise participation, shared meaning-making, and the co-construction of knowledge, while democratic education foregrounds student voice, agency, and learners' capacity to shape the conditions of their own education (Baraldi et al., 2021; Graham & Fitzgerald, 2010; hooks, 2010). In this sense, transformative educational settings are characterised by a move beyond transmission-based models towards learning environments in which students are recognised as co-creators of knowledge, take responsibility, and develop ownership of their educational processes. Such a perspective also redefines the role of teachers, who are understood less as authoritative transmitters of predefined content than as facilitators of meaningful participation, exchange, and power-sharing. Against this background, the paper asks to what extent this specific democratic school supports self-determination, meaningful learning, and shared responsibility, and where tensions or contradictions may emerge in practice. Empirically, the study asks what motivates students to learn in an environment without compulsion, how they perceive the role of teachers, which teacher qualities they value most, what they experience as better than in other schools, and what they would like to improve. On this basis, the contribution develops a reflection on whether and how students in democratic school settings can be understood as agents of their own transformation. Rather than treating transformative education as a purely normative aspiration, the contribution investigates how it is lived, interpreted, and evaluated by students themselves. In doing so, it responds to the panel's concern with educators as agents of change, while shifting attention to learners as co-constitutive actors of educational transformation. By foregrounding student voice, the paper contributes an empirical case study to current discussions on transformative education and democratic schooling and offers a critical reflection on pedagogical relationships, school culture, and the practical conditions under which transformative education may become possible in formal educational settings.

CHILLOUT: AN EXAMPLE OF BEST PRACTICES IN REHABILITATION AND TRANSFORMATIVE EDUCATION

Gabriele Brancaleoni (Cadiai Cooperativa sociale, Italy) · **Maria Drusiani** (Cadiai Cooperativa sociale, Italy)

Young adults | Transformative education | mental health

This paper aims to present the initial findings of ongoing research within the 'ChillOut' project, run by 'ForTeen' (an educational and rehabilitation centre opened by the CADIAI social cooperative in Bologna, which has been operating since 2023). ChillOut supports young people aged between 15 and 25, in transition from adolescence to adulthood. Institutionally, this involves moving from the Child and Adolescent Neuropsychiatry Unit (NPIA) to the Mental Health Centre (CSM); existentially, it involves moving from a state of psychological distress towards greater well-being: the service, indeed, is aimed at young adults in a state of vulnerability and psychological distress who are particularly at risk of developing forms

of social withdrawal and school phobias, offering them a range of individualised and/or small-group educational activities led by educators and workshop leaders. ChillOut is designed as an experiential space with a strong practical focus, enabling participants to engage in a 'safe' environment by developing their personal potential and fostering their interpersonal and social skills, thereby allowing them to experience a sense of 'being able to do' and 'being able to be'. The educational program views the process of recovery and rehabilitation as a process of individual emancipation and empowerment. The intervention works together with the individuals to improve their functional abilities, support them in regulating their behaviour, and help them develop or enhance latent skills, in order to achieve greater competences in managing their own actions and dealing with the complexities of their life circumstances, whilst increasing their awareness of their problem-solving and life planning abilities. ChillOut also acts as an alternative unstructured school experience, for those who are unable to access traditional programs designed to prevent early school leaving. This educational experience is conceived not only as a place to support studying, but also and above all as a space that evokes the Greek concept of scholè – free time, not performance time. It is a place of care, rest and inner regeneration, a moment of time away from the logic of productivity, in which it is possible both to refrain from judging personal results and to lower personal and social expectations regarding the ability to perform. This educational experience aims at supporting young adults in listening to themselves, understanding their inner states, and taking care of themselves and one another. As a matter of fact, ChillOut wants to facilitate and promote processes of active and horizontal learning, in which not only standard curricular knowledge but also the skills needed to interpret and make sense of one's own social context are acquired through exchange and discussion. The porpose of this theoretical and empirical research is not only the description of theoretical assumptions underpinning educational and rehabilitative practice, but also the outcomes' highlights of transformative education - both as rehabilitative practice and as opportunity to acquire the skills necessary for critical and active citizenship. This can bring sustainable changes, promote selfcare and reciprocity, and renew inclusive sensibility, focused on gender equality, and active in the defence and promotion of human rights.

DEVELOPING CULTURAL AWARENESS AND EXPRESSION IN YOUTH: DANCE TEACHERS' EXPERIENCES AND PERSPECTIVES

Ilze Kačāne (Daugavpils University, Latvia) · **Oksana Kovzele** (Daugavpils University, Latvia)

arts-based education | cultural participation | active citizenship

Cultural awareness and expression – recognised by the European Commission as one of the eight key competences for lifelong learning – is fundamental to fostering democratic societies, strengthening community cohesion, promoting civic engagement, and encouraging respect for diversity (EC). To enable young people to become citizens who actively contribute to the development of a sustainable society, formal and non-formal educational contexts are increasingly required to become more participatory and inclusive (Giroux, 2011; Bourn, 2022). One approach to achieving this goal is the use of arts-based methods, which are also effective tools for fostering young people's cultural awareness and creative expression (Chemi & Du, 2018; Ferrer-Fons et al., 2022). By implementing arts-based pedagogies in diverse educational contexts, educators play a pivotal role as agents of social change, supporting young people in the development of the knowledge, skills, and confidence needed to actively engage with social and cultural issues. Research indicates that dance, as an artistic practice, enables individuals to express personal experiences through movement, contributing to identity exploration and strengthening a sense of belonging, while also fostering cultural participation and intercultural dialogue (Sango & Pickard, 2024). This qualitative study draws on empirical data collected through semi-structured interviews with dance teachers working with youth aged 16–30 as part of interest-based education in comprehensive

schools and cultural institutions or organisations in Latvia. It examines teachers' perceptions of the educational potential of dance, how cultural themes and democratic values are incorporated into teaching practices, and the contribution of dance activities to young people's personal growth, cultural awareness, and creative expression. The findings underscore the importance of interest-based education in dance, which extends beyond physical training to serve as a space for dialogue, exploration, co-creation, and creative expression. Teachers highlight the significance of collaborative practices in supporting learners' awareness of cultural differences and shared experiences, stimulating intellectual engagement, and enabling young people to assume the role of meaning-makers. The results suggest that competences and skills (including creativity and reflection, cultural literacy and intercultural awareness, personal and shared cultural expression and collective agency and social responsibility) acquired or developed through such activities can contribute to transformative learning processes by fostering learners' empathy, democratic engagement, and active citizenship. This article is based on research conducted within the framework of the international project "Promoting Understanding and Lifelong learning Successful Education through the ARTs and culture" (PULSE-ART), funded by the European Union's Horizon Europe Programme under Grant Agreement No.101178988. Views and opinions expressed are, however, those of the authors only and do not necessarily reflect those of the European Union or European Research Executive Agency (REA). Neither the European Union nor the granting authority can be held responsible for them.

THE ELCRA PROJECT AS A SPACE FOR ENVIRONMENTAL LITERACY AND CRITICAL REFLECTION ON CLIMATE ACTIVISM

Claudia Banchetti (University of Siena, Italy)

Education | Environmental | Learning

The intensification of the climate crisis has fostered growing collective mobilization, giving rise to environmental movements that adopt heterogeneous strategies, ranging from institutional forms of protest to more conflictual practices. The scientific literature on environmental and climate activism outlines a complex landscape in which conventional forms of civic participation intertwine with more radical manifestations of protest. Within this framework, the ELCRA project (Environmental Literacy in Higher Education Context for Preventing Violent Radicalization in Climate Activism) was developed by a consortium of five European universities between 2023 and 2026: Universidad Complutense de Madrid, Klaipėda University, Jagiellonian University in Kraków, the University of Coimbra, and the University of Siena. ELCRA is situated within the perspective of Transformative Education and aligns with SDG 4.7, aiming to train students capable of orienting their practices toward socio-ecological sustainability and preventing forms of violent radicalization within climate activism. Building on this context, the contribution presents a case study of a project designed for students to foster processes of critical co-construction among future education professionals on environmental issues. Following a literature review on environmental radicalization, the ELCRA project combined a multidisciplinary MOOC (10 hours) with COIL sessions (6 hours), involving students from the five European universities (n = 228 students for the MOOC and n = 50 for the COIL) in collaborative activities on topics such as sustainability, emotions and climate, critical thinking, activism, and environmental radicalization. The instructional design was grounded in the transformative learning approach originally developed by Mezirow and later expanded by Fabbri and Melacarne. Within this perspective, MOOC and COIL were integrated: the MOOC provided critical literacy on environmental issues, equipping students with the conceptual tools needed to interpret contemporary challenges; the COIL sessions, on the other hand, encouraged reflective re-elaboration of the acquired knowledge—also through a workshop-based dimension—with the aim of guiding students toward an awareness

of their future professional roles as agents of change. It should be acknowledged that the study presents some limitations, particularly related to the difficulty of measuring transformative learning processes. Nevertheless, the reflection developed from this experience suggests that the integration of asynchronous learning environments and intercultural dialogue can represent a fertile context for activating processes of critical meaning-making. Within this framework, students were placed in conditions that allowed them to reinterpret the knowledge acquired in light of their personal experiences, their social contexts of belonging, and the different cultural perspectives involved, in line with a view that understands them as potential agents of change.

TRANSFORMATIVE PRACTICES FOR DEMOCRATIC AND SUSTAINABLE EDUCATION IN EVERYDAY SCHOOL LIFE: EMPIRICAL INSIGHTS FROM GERMAN SCHOOLS

Nina Goretzko (Freie Universität Berlin, Germany) · **Luisa Girnus** (Freie Universität Berlin, Germany)

transformative practices · civic education · education for sustainability

In response to multiple crises, debates increasingly link transformative education with civic education (e.g. Hoggan-Kloubert und Mabrey 2022) and education for sustainability (e.g. Sterling 2010). Scholars emphasized that citizens committed to living in a democracy must be open to transforming themselves and the world around them, as they should critically examine themselves, society, and the world, and align their own perspective on the world accordingly (Hoggan-Kloubert und Mabrey 2022, 169). Moreover, transformative education may support the collective search for answers for a sustainable future (Singer-Brodowski 2023, 20625), taking into account the handling of ambiguities, uncertainties, and controversies (Singer-Brodowski 2023, 20625; Pettig und Ohl 2023). Accordingly, educational settings are tasked with creating opportunities for educational practices at the intersection of these aspects of transformative, political, and sustainable education. Despite these conceptual links, little is known yet about how they unfold in everyday educational practice. This presentation examines such moments of transformative education in schools as one of the most important educational institutions. Drawing on a practice perspective that includes the involvement of all participants and contextual factors (Breidenstein 2008, 110), the focus shifts to different actors in the field, including students and teachers. It also examines both planned and unplanned spaces in which transformative educational practices can occur. Using ethnographic data from a project in German schools, the presentation analyzes situations in which political and sustainable aspects are addressed in routine school life. The presentation concludes with a discussion guided by the following questions, based on the findings: Which individual and collective actors are involved in transformative practices at school? In which everyday school situations do transformative practices occur? What constitutes the transformative core of these practices? How do transformative practices position and engage different actors as democratically and sustainably responsible citizens? How can everyday school practices enable students to contribute to democratic and sustainable societal transformation?

EDUCATIONAL EMERGENCIES AS TRANSFORMATIVE OPPORTUNITIES: TEACHERS' PERSPECTIVES FROM AN ETHNOGRAPHIC STUDY

Anna Chiara Mastropasqua (University of Padova, Italy) · **Emilia Restiglian** (University of Padova, Italy)

Educational emergencies | primary school | ethnographic research

Contemporary schooling is increasingly shaped by global crises, including health emergencies, social instability, economic inequalities, and humanitarian challenges. These dynamics profoundly affect educational systems, redefining the role of schools not only as spaces that ensure learning continuity but also as environments that foster social cohesion, resilience, and democratic participation. Within this framework, educational emergencies should not be interpreted merely as disruptive events but rather as structural conditions capable of generating transformative pedagogical responses and stimulating creative educational communities. The present study aims to explore the educational meaning and transformative potential of emergency situations in primary education, focusing on teachers' perceptions, practices, and professional identities. In particular, the research seeks to reinterpret emergency conditions beyond an alarmist perspective, highlighting their potential to stimulate reflective practice, collective responsibility, and pedagogical innovation within school communities. The study adopts an intercultural ethnographic research design and is grounded in qualitative methodology. Data were collected through participant observation and semi-structured interviews with 40 primary school teachers working in eight public schools located in two distinct geographical and cultural contexts: Rome (Italy) and Freetown (Sierra Leone). The comparison between these two educational environments allows for a broader understanding of how emergency situations are experienced, interpreted, and addressed by teachers in different socio-cultural settings. Data analysis was conducted through an interpretative phenomenological approach, enabling an in-depth exploration of meanings, emotions, and professional practices related to emergency experiences. The findings reveal that teachers in both contexts tend to perceive emergency not as an exceptional event but as a permanent and structural condition affecting everyday educational practices. Despite contextual differences, educators demonstrate strong adaptive capacities, activating relational, emotional, and creative resources to cope with crisis situations. In both contexts, emergency conditions encourage the development of flexible teaching strategies, stronger community engagement, and a redefinition of teachers' professional roles. Teachers emerge as key agents of resilience, capable of transforming critical situations into opportunities for educational reflection and innovation. While in the Italian context emergency is often associated with relational, emotional, and institutional challenges, in Sierra Leone it is more strongly linked to material and structural difficulties. Nevertheless, teachers in both contexts mobilize similar pedagogical resources centered on care, responsibility, and collaboration. The study highlights the need to move from an alarmist interpretation of emergencies toward a transformative educational perspective. Strengthening teacher education, promoting intercultural dialogue, and encouraging collective action appear essential for developing resilient school communities capable of turning vulnerability into learning opportunities. In this sense, the research contributes to a broader reflection on the civic and democratic mission of education in times of global uncertainty.

CONCEPTIONS IN EDUCATION: MAKING UNEXAMINED LOGICS VISIBLE FOR TRANSFORMATIVE PRACTICE

Lisa Bugno (University of Padova (Italy), Italy)

Transformative education | Teachers' conceptions | Intercultural education

Educational practices are shaped not only by explicit pedagogical theories and institutional policies but also by conceptions, routines, beliefs, frames of reference, and cultural norms that often remain unexamined (Fives & Buhel, 2012 ;2015). These structures silently guide how teachers and educators interpret situations and make decisions. Because they operate below the level of conscious awareness, they tend to remain unquestioned, but they influence educational processes. Bringing these logics to the surface is therefore crucial for scholars and practitioners engaged in transformative education. Drawing on the theoretical framework of transformative learning (Mezirow, 1997), this contribution conceptualises conceptions as embedded meaning structures that shape intentions and action within educational contexts. If left unaddressed, such logics can have significant consequences (Civitillo, Juang & Schachner, 2018): first, they may reproduce inequalities by normalising practices and expectations that privilege certain groups of learners while marginalising others. Second, they can limit innovation by constraining educators' capacity to imagine and implement alternative pedagogical approaches. Third, unexamined logics may close epistemic possibilities, narrowing the range of legitimate ways of knowing and understanding within educational environments. Finally, they can constrain educators' reflexivity and naturalise existing power relations, making hierarchical structures appear inevitable rather than historically and socially constructed. Thus, making implicit logics visible becomes a central step in fostering transformative processes in education. Researchers and teacher educators have a particular responsibility to illuminate these often invisible mechanisms, supporting educators in recognising and questioning the assumptions that underpin their professional practice. This process requires creating structured opportunities for reflection and dialogue that enable practitioners to critically examine taken-for-granted perspectives. To illustrate how unexamined logics emerge in educational practice, an example drawn from an empirical study on teachers' conceptions and intercultural educational actions will be presented (Agostinetto & Bugno, 2020). The research adopted a qualitative design aimed at exploring how teachers' conceptions influence pedagogical planning and classroom practices. Data were collected through semi-structured interviews with 46 in-service teachers, participant observation of educational activities, and document analysis of planning documents (Cohen, Manion & Morrison, 2018). The findings revealed a broad and sometimes contradictory range of conceptions among teachers, as well as frequent inconsistencies between declared pedagogical intentions and actual practices. For instance, intercultural education was often interpreted through episodic activities (such as organising a "multi-ethnic lunch") rather than through sustained pedagogical strategies integrated into everyday classroom practice. Starting from the data collected in this first research phase, a further step of the study involved an attempt to re-conceptualise teachers' conceptions through a series of focus groups designed as reflective meetings. These focus groups were intended to create a space where participants could critically engage with the empirical findings, reflect on their own implicit and unexamined logics, and collectively explore possible transformations of their practice. This qualitative research represents an attempt to move from the identification of implicit teachers' conceptions toward their (re)consideration and possible re-conceptualisation. In this way, the contribution reflects on how research can contribute to opening spaces for reflexivity in teachers' professional practice and to rethinking intercultural educational actions.

LAND OF THE FUTURE OR LAND OF DEPARTURE? DREAMS, NEEDS, AND "RESTANZA" AMONG STUDENTS IN AGRIGENTO

Centro Studi Giuseppe Gati (Centro Studi Giuseppe gati, Italy) · **Alessandra Polidori** (Centro Studi Giuseppe gati, Italy; Université de Neuchâtel) · **Giorgia Giudice** (Centro Studi Giuseppe gati, Italy; Wageningen University) · **Alessandro Giambrone** (Centro Studi Giuseppe gati, Italy)

Transitions | Territorial disparities | Right to Remain

This abstract builds on the study "Terra di Futuro. Tra i sogni e i bisogni delle studentesse e degli studenti della provincia di Agrigento", which aims to understand how younger generations perceive Sicily: their place of origin, yet one marked by a lack of opportunities. The research was developed within the Ma.Dre project (Mapping Dreams to Safeguard Students' Choices) of the "Giuseppe Gatì" Study Centre, which seeks to map the expectations, ambitions, and factors shaping upper secondary students' educational and career choices, in order to read the island's future through their eyes. Launched in 2024, the study involves 1,363 students (aged 14–19) from six "partner" schools in the province of Agrigento, using an anonymous questionnaire with 24 closed- and open-ended questions and a mixed-methods design: statistical analysis for structured responses and thematic analysis for the written texts. The broader context is a region affected by depopulation, territorial inequalities, and fragile public services, where the idea of restanza (choosing to stay) is framed as an active and transformative choice rather than resignation. Findings reveal a widely shared sense of disadvantage: nearly four in five respondents believe there are fewer opportunities in Sicily than in other Italian regions or abroad; only a very small minority think the opposite. Quality of life is also often imagined as better elsewhere, although a significant group values climate, the sea, relationships, and a sense of belonging. After completing upper secondary school, most students wish to continue studying; however, only a small share expect to remain in their own town, while many envision moving within or outside the island, and a substantial proportion remain uncertain. Here, the future enters as a central protagonist: the higher the school grade, the more critical—and less optimistic—the outlook tends to become. Across the data, three key issues emerge: inequalities (including gender inequalities), perceptions of "civility"/development, and the central role of climate and environment in shaping choices. Overall, the report advocates for a public use of data: not to add yet another "Greek lament" (even if with charts), but to mobilize schools, institutions, and communities to build real conditions so that staying becomes a genuine possibility, not an act of faith.

COMMUNITY-BASED EXPERIENTIAL LEARNING FOR DEMOCRATIC EDUCATION: PROMOTING TRANSFORMATIVE LEARNING THROUGH CITY AS TEXT IN HIGHER EDUCATION

Debra Giambo (Florida Gulf Coast University, United States of America) · **Marianela Rivera** (Florida Gulf Coast University, United States of America) · **Tunde Szecsi** (Florida Gulf Coast University, United States of America)

experiential learning | City as Text | community-based learning

Transformative Education (TE) calls for pedagogical approaches that encourage learners to critically engage with social realities and develop the knowledge needed to participate in democratic societies. In alignment with SDG 4.7, TE emphasizes global citizenship, awareness, and critical reflection through innovative educational practices. Within higher education, experiential and place-based pedagogies offer ways to connect these goals to students' engagement with real-world contexts. At a time when policy constraints in parts of U.S. higher education have limited how certain social topics may be addressed, educators are increasingly exploring approaches that focus on participatory knowledge production through experiential engagement with communities. This presentation examines two community-based learning projects grounded in City as Text methodology, both implemented in lower-income communities in Florida, United States, characterized by large immigrant populations. Both projects involved undergraduate students: one including students from multiple academic majors, and another implemented in a teacher education course. City as Text is an experiential learning approach that invites students to engage with communities as sites of inquiry through critical observation, dialogue, and reflection (Braid & Long, 2010). The methodology shifts students from passive recipients of knowledge to active co-creators of their learning experiences (Braid, 2021) and situates knowledge production within real-world contexts by connecting academic concepts with lived community experiences (Clavijo Olarte et al., 2023). Engagement with place supports reflective observation and meaning-making, key elements of experiential learning processes (Kolb & Kolb, 2017). Using this approach, students interpreted the community as a "text." In the first project, students explored public spaces and local institutions while reflecting on language use and identity. These experiences prompted students to reconsider their perceptions of the community and connect local dynamics to broader contexts. In the teacher education course, the methodology was adapted as Community-as-Text, where teacher candidates conducted observations across local sites and analyzed how community environments might influence educational experiences for multilingual learners. For many participants, this represented their first sustained engagement with communities different from their own backgrounds, prompting reflection on how social contexts reflect values and shape lives, including educational opportunities and practice. Drawing on Transformative Learning Theory (Mezirow, 1997) and critical place-based education (Gruenewald, 2008), this presentation examines how experiential engagement with communities fosters participatory knowledge production and encourages students to reconsider prior assumptions about communities, language, and education (Dewey, 1998; Freire, 2000; Kolb & Kolb, 2017) and to critically consider intentions for action (Mezirow, 1997). Preliminary analysis indicates that immersive engagement with local environments deepens awareness of community dynamics and their connections to broader global contexts. Across Community-as-Text projects, additional insights emerged regarding multilingualism as an educational resource, roles of community institutions in supporting learning, and the value of recognizing family and community knowledge as assets for teaching. By linking experiential learning with critical reflection, these course-based projects illustrate educators as agents of change by designing pedagogical experiences that promote democratic participation, community understanding, and engaged citizenship. Community-based experiential learning thus offers a pathway for preparing students to recognize community knowledge as a resource for more inclusive and democratic educational practices.

Knowledge, Data, and Democracy: Towards Systemic Innovation in School (INDIRE)

PANEL CONVENORS: Andrea Nardi (Indire, Italy); Silvia Panzavolta (Indire, Italy); Andrea Benassi (Indire, Italy)

PANEL KEYWORDS: systemic innovation, democracy, data-driven decision making processes

Today, schools operate in an ecosystem shaped by social pressures, widening inequalities, accelerated digital transformation – not only because of AI – and increasing accountability demands. In this context, democratic governance cannot rely solely on participation as a formal mechanism; it must evolve into an informed, reflective, and genuinely collective shared data and decision-making culture. Schools are therefore called to reconnect learning and democracy through practices that are participatory, evidence-informed, and oriented toward long-term development. Within this process, data can become democratic resources capable of enabling systemic transformation. The panel places particular attention on the emerging role of data-informed and evidence-based decision-making in schools, interrogating both its transformative potential and its democratic risks. Democracy is framed not as an abstract ideal but as a concrete organizational practice shaped by how information is generated, interpreted, and used collectively within school communities, while data are approached not as neutral inputs but as socio-technical artefacts embedded in power relations, professional cultures, and ethical frameworks. This perspective positions democracy as a learning-oriented organizational principle, directing attention to how decision-making processes, governance structures, and innovation pathways can be democratically reconfigured in complex educational environments. Key areas of inquiry include: decision-making models in educational leadership, data literacy as a democratic competence, participatory governance supported by evidence use, organizational learning through reflective data practices, distributed leadership and collaborative intelligence, ethical and political implications of educational datafication. The panel promotes an interdisciplinary dialogue crossing education, organizational studies, political philosophy, and data studies, welcoming theoretical, empirical, and design-based contributions.

READING SCHOOL THROUGH DATA: REFLEX AS A TOOL FOR DEMOCRATIC GOVERNANCE AND SYSTEMIC INNOVATION

Silvia Panzavolta (INDIRE, Italy) · **Andrea Nardi** (INDIRE, Italy) · **Valentina Toci** (INDIRE, Italy)

systemic innovation | participatory governance | school self-reflection

In contemporary educational systems, the growing availability of data has not automatically resulted in more democratic, inclusive, or reflective decision-making processes. While data are increasingly central to governance and accountability, they often remain confined to school leadership or external evaluators and, for much of the school community, opaque - difficult to access and largely closed to scrutiny, interrogation, or debate by those most directly affected by their use - thus limiting their potential to support collective sense-making and shared responsibility, while UNESCO (2021) advocates for “a new social contract”. Research has highlighted how data-informed decision-making can foster improvement only when embedded in participatory cultures and supported by adequate data literacy (Vincent-Lancrin et al., 2019). Within this framework, Reflex was developed by INDIRE as a systemic, participatory, and data-informed self-reflection tool designed to support schools in interpreting, discussing, and governing innovation processes in a democratic way. Reflex is grounded in a holistic conception of school functioning (EU, 2022), where innovation is understood as an emergent property of interconnected organizational, pedagogical, and cultural dimensions rather than as the result of isolated initiatives or technological adoption. The framework articulates ten dimensions of school functioning (governance, curriculum, teaching and learning, assessment, collaboration, internationalization, wellbeing, professional development, learning environments, and time management) which together offer a comprehensive lens for reading how innovation is embedded, sustained, and culturally appropriated within school communities. These dimensions draw on and extend existing international frameworks such as Innovative Learning Environments (OECD, 2017), DigCompOrg, and SELFIE (European Commission, 2018), while explicitly addressing gaps related to organizational learning, wellbeing, and temporal structures. What distinguishes Reflex from other evaluation or monitoring tools is its explicit democratic orientation. The tool is designed to be periodically completed by multiple school actors (i.e. school leaders, teachers, and staff) thus fostering shared

interpretation of data and collective reflection on evidence. Rather than producing rankings or prescriptive judgments, Reflex generates shared representations of school functioning that become the basis for dialogue, negotiation, and informed decision-making. In this sense, data are treated not as neutral indicators but as cultural artifacts that require interpretation, discussion, and contextualization within the school community. Within the panel's focus on knowledge, data, and democracy, Reflex can be understood as a device for democratizing both governance and data literacy at the school level. By making organizational processes visible across multiple dimensions, the framework supports distributed leadership, reduces informational asymmetries, and enables schools to move beyond compliance-oriented accountability toward reflective and participatory governance. Moreover, the cyclical nature of the tool supports longitudinal monitoring, reinforcing organizational learning and shared responsibility for change. The contribution argues that fostering democracy in education requires not only participatory pedagogies, but also shared infrastructures for reading and governing complexity, where data function as a common language for reflection rather than as instruments of technocratic control.

GENERATIVE ARTIFICIAL INTELLIGENCE AND FORMATIVE ASSESSMENT: DESIGNING LEARNING PATHWAYS FOR COGNITIVE AND METACOGNITIVE GROWTH

Roberto Trinchero (Università di Torino) · **Maria Luisa Boninelli** (Università degli studi di Catania) · **Susanna Piacenza** (Università Telematica eCampus)

Generative Artificial Intelligence | Formative Assessment | Metacognition and Self-Regulation

The paper explores, from a theoretical and design-oriented perspective, the potential of Generative Artificial Intelligence (GAI) to support formative assessment (assessment as learning), with the aim of developing pathways that integrate teaching, assessment, and students' self-regulation processes. Within this framework, assessment tasks are conceived not merely as tools for measuring learning outcomes but as intentionally designed opportunities for deep cognitive activation (retrieval, restructuring, and transfer of schemas) and for the development of metacognition and evaluative agency. The proposed learning pathways are structured as sequences of progressive challenges, in which learners advance to the next task only after mastering the conceptual tools underpinning the previous one—a condition referred to as learning readiness—through forms of deliberate practice. Each stage of the training process entails the gradual construction of cognitive, strategic, and dispositional prerequisites through experimentation, debriefing, conceptualization, and the automatization and transfer of acquired knowledge and skills. The expected outcome of this pedagogical approach is the cultivation of learners capable of mobilizing increasingly complex cognitive schemas with mastery and autonomy. The paper begins by examining the potential of classical Intelligent Tutoring Systems (ITS) and extends their possibilities in light of current GAI developments, with the goal of defining design guidelines for their application within formative assessment pathways. Specifically, it discusses how GAI systems can enable adaptive cycles of interaction between student and machine, whereby the latter proposes sequences of challenging tasks and monitors, in real time, the evolution of students' knowledge, skills, attitudes, and strategies. These tasks are designed to engage learners in a wide range of cognitive processes—including the identification of key concepts and inconsistencies, comparison and classification, synthesis, and graphical representation—with instructional guidance provided by the system itself. Learner reflection is fostered through process narration, error analysis, the definition of quality criteria, and reasoned self-assessment of performance. The proposal outlines three levels of integration: Knowledge base design that codifies not only disciplinary content but also performance quality constraints, evaluative criteria, and observational indicators of progression in knowledge, skills, attitudes, and competences. Dynamic learner modeling that tracks not only outcomes but also the evolution of underlying cognitive processes and mental dispositions relevant to learning readiness. Tutoring strategies that

adapt task difficulty, feedback type and timing, forms of metacognitive scaffolding, and opportunities for collaborative engagement, transforming each assessment moment into an opportunity for cognitive restructuring and internalization of self-assessment and self-regulation criteria. In conclusion, the paper highlights key challenges and open issues, such as modeling complexity, fine-grained personalization, and ethical and privacy concerns, to guide future research toward a pedagogically grounded development of GAI-based intelligent tutoring systems.

MEASURING AND BUILDING DATA LITERACY IN SCHOOLS: A MULTILEVEL PERSPECTIVE FROM EVIDALI AND CITTÀ DELL'EDUCAZIONE

Veronica Mobilio (Fondazione per la Scuola, Italy) · **Fabrizio D'Ovidio** (Fondazione per la Scuola, Italy)

Data Literacy Teachers

In recent years, data literacy has been conceptualised as a core professional competence for teachers and school leaders, situated at the intersection of educational governance, school improvement, and evidence-informed decision-making. Yet, despite this growing recognition, the concept remains theoretically fragmented and unevenly operationalised. The EVIDALI project (Evidence-Informed Data Literacy for Policy & Practice) addresses this gap by providing a conceptual and empirical foundation for Data Literacy for Teaching, defined as teachers' ability to transform information into actionable instructional knowledge and practices (Mandinach & Gummer, 2016). Through a PRISMA-guided review of 76 empirical studies published in 2011-2025, the project shows that only a minority of studies has a clear definition of "data", while most privilege student performance indicators over qualitative, digital, demographic, and contextual sources (FBK-IRVAPP, 2025). This fragmentation is mirrored at the policy level, where national approaches to data literacy remain uneven and loosely institutionalised (European Schoolnet, 2025). Integrating established frameworks on data use and instructional decision-making (Kippers et al., 2018; Schildkamp & Lai, 2013), the review identifies four core domains structuring teacher data literacy: 1) data use as a cyclical process (from problem identification to evaluation); 2) professional knowledge and skills; 3) internal factors such as beliefs and self-efficacy; 4) external conditions, including leadership and organizational structures. Building on this analytical lens, the territorial experience of Città dell'Educazione translates these conceptual dimensions into an intervention and inquiry strategy. The initiative – a three-year programme implemented in four Italian cities (Turin, Genoa, Vercelli, Savona) across two regions and involving nearly 100 primary and secondary schools – initiated a structured listening phase based on document analysis and interviews with school leaders and staff. This exploratory phase revealed recurring challenges that closely mirror the gaps identified in the review: difficulties in identifying reliable data sources; limited competence in survey design and indicator definition; insufficient analytical skills; weak reporting practices; and limited integration between data use and strategic planning. In response, Fondazione per la Scuola designed a modular, practice-oriented professional learning programme aimed at strengthening schools' capacity to collect, analyse, interpret, and communicate data for educational planning. The programme combines theoretical inputs with applied work on real school datasets, including INVALSI data and internally generated data, and is organised through flexible modules covering survey design, data analysis, reporting and evaluation. A structured monitoring system accompanies the training, including participation tracking and a pre–post questionnaire assessing changes in data use, knowledge of data sources, interpretation skills, and attitudes towards data-driven practices. For school leaders, the instrument also measures perceived self-efficacy and aspects of educational leadership related to data use. By connecting the EVIDALI conceptual synthesis with a territorially grounded experience, this paper argues that data literacy should be understood not merely as an individual technical competence, but as an organisational and cultural infrastruc-

ture that enables informed and accountable decision-making within school systems (Mobilio, 2025). The experience of Città dell'Educazione shows how data literacy can move from policy aspiration to embedded professional practice, contributing to a more reflexive and democratically oriented model of school governance.

LEADERSHIP IN EDUCATION: LEAD FOR DEMOCRACY

Anna Cristina D Addio (GEM Report UNESCO, France)

leadership · democracy · learning

This paper explores how democratic school governance and distributed leadership drive innovation within education systems and promote learning for democracy. Drawing on data from UNESCO's Global Education Monitoring Report Lead for Learning (2024) and its regional edition, Lead for Democracy: Latin America (2025), it analyses how sharing decision-making power among teachers, students, families, and communities helps build stronger educational outcomes and democratic skills. The report finds that traditional top-down models of school leadership no longer adequately address today's complex educational challenges. Collaborative leadership styles such as distributed, participatory, or democratic approaches, empower schools to harness the collective expertise of their communities, set shared goals, encourage co-operation, and support meaningful learning. These practices are deeply rooted in Latin American educational culture, even when not formally recognized by policy. Through comparative policy analysis and case studies from various Latin American countries, the presentation will examines how governance structures, leadership training, and avenues for participation influence schools' ability to operate as democratic institutions. The evidence indicates that distributed leadership boosts agency, involvement, and civic education, while also enhancing school improvement and organizational innovation. Yet, there are notable gaps between policy intentions and real-world practice. Centralized decision-making, insufficient preparation for collaborative leadership, and lack of recognition for teacher and student leadership all limit the impact of democratic governance in schools. Ultimately, this work contends that promoting distributed leadership will advance both democratic values and educational quality, positioning schools as spaces for democratic experimentation and systemic progress.

PERFORMING DATA CITIZENSHIP: THEATRE-BASED PEDAGOGIES FOR CRITICAL DATA LITERACY IN DEMOCRATIC EDUCATION

Elena Sorba (IULM UNIVERSITY, Italy) · **Elisabetta Risi** (IULM UNIVERSITY, Italy)

critical data literacy · data citizenship · democratic education

In an era of pervasive quantification, indicators and metrics increasingly shape how education, health, environment, and governance are understood and managed. Numbers are frequently presented as self-evident outputs, while the assumptions, classifications, omissions, and interests embedded in data infrastructures remain opaque (Markham, 2019). This

contribution conceptualises statistical and data literacy as a democratic competence: the capacity to interpret, evaluate, and use quantitative information in collective decision-making, while reflecting on how data are framed and mobilised in institutional communication and public reasoning (Gal, 2002; Watson, 2006). Grounded in critical pedagogy (Freire, 1970; Giroux, 2011) and scholarship on datafication and algorithmic governance (Markham, 2019), the paper approaches quantitative knowledge as a situated socio-political artefact rather than a neutral tool. A persistent challenge for education is that statistical ideas are often experienced as abstract, anxiety-inducing, and disconnected from lived experience (Garfield, 1995; Ben-Zvi & Garfield, 2004). We argue that theatre-based and role-based pedagogies can support epistemic agency by making data practices visible, experiential, and contestable in a shared learning space—where uncertainty, inference, and evidence become matters for collective deliberation (Braund, 2015; Lee et al., 2015). We introduce the Theatre of Statistics framework, which brings together classroom drama—immersive, participatory, curriculum-based practices—and science theatre—performances for wider audiences—showing how theatre and drama can enhance statistical and data literacy by transforming abstract concepts into embodied, affective learning (Ødegaard, 2003; Bhargava et al., 2022). We operationalise the framework through two prototypes: a theatre-based format for younger learners (in development) and a climate-negotiation live action role-play in which participants represent countries with conflicting interests and use indicators, graphs, and sources to build claims, respond to critique, and negotiate collective priorities (Heras & Tàbara, 2014). The activity foregrounds evidence-based argumentation and the social consequences of reasoning with data under uncertainty (Wild & Pfannkuch, 1999), treating data literacy as a democratic practice of public justification and accountability. Preliminary findings from our pilot survey suggest positive signals in perceived understanding and attitudes toward data, accompanied by high student engagement. Overall, the study illustrates how performative formats can connect knowledge, data, and democracy by making statistical reasoning observable, affordable, and pedagogically actionable within educational settings.

DATA USE IN ITALIAN SCHOOLS: A QUALITATIVE ANALYSIS OF DATA USE PROCESSES AND ATTITUDES TOWARDS DATA BEYOND NATIONAL ASSESSMENTS

Giulia Montefiore (Universitat Autònoma de Barcelona (UAB), Spain) · **Antoni Verger** (Universitat Autònoma de Barcelona (UAB), Spain) · **Gerard Ferrer-Esteban** (Universitat Oberta de Catalunya (UOC), Spain)

data · sensemaking · enactment

Expectations for schools to use data from multiple sources to improve the education they provide have been increasing globally (Verger & Skedsmo, 2021). What counts as data in education has expanded beyond standardised national large-scale assessments. Within the Italian school autonomy and accountability system, schools are expected to analyse and reflect on data provided by central administration as well as data produced locally to support pedagogical and organisational improvement. This research investigates how schools engage with such data, including INVALSI national large-scale assessment tests, schools' interim assessments and self-evaluation reports, as well as grades, demographic information, and more. The study asks how Italian schools and their actors conceptualise and engage with different types of data in practice, data use purposes and enabling conditions. In 2016, Pastori and Pagani reported growing trust but difficulty in

using national assessment data. Several years later, with a fully operational national school evaluation system, Italian schools appear to interact with data from multiple sources at varying levels of intensity. This study therefore examines the extent to which data-use processes and routines are present in Italian schools, what actors consider to be data, and what attitudes they hold towards its role in organisational and pedagogical improvement. The analysis examines how school organisational and political contexts, individual factors, and the accountability system mediate data use, and whether and how data informs pedagogical and organisational decision-making. Attention is given to collaboration, collective reflection, and shared spaces and time within schools to understand how data are interpreted by school actors and how they contribute to decision-making processes. The study adopts an understanding of policy as enacted, interpreted and reconfigured by local actors rather than neutrally implemented (Ball et al., 2012). It draws on conceptualisations of data use in education (Coburn and Turner, 2011; Spillane, 2012), engages with the notion of data-informed rather than strictly data-based decision-making (Schildkamp et al., 2019), and considers the potential role of data use in supporting equity-oriented practices (Datnow & Park, 2018). Methodologically, this qualitative study draws on interviews (n=88) and focus groups (n=13) with principals, leadership teams, and teachers, and school document analysis in ten comprehensive primary and lower-secondary schools in Rome, of different socio-economic contexts. Preliminary findings suggest a limited and heterogeneous presence of structured data-use practices. Organisational constraints and uneven levels of data literacy appear to constitute important barriers to sustained engagement with data. Often, data provide evidence for already known issues and are experienced as legitimising action to address them. More rarely, data are used to inform decision-making that fully exploits school autonomy to address equity issues. While schools express interest in using data to better understand student needs and inequalities, systematic processes supporting equity-oriented data use remain unevenly embedded in school practices. This study contributes empirical evidence on data use practices in a Southern European low-stakes accountability context still relatively underexplored in the literature. It also advances understanding of how organisational conditions, data literacy, and collaborative practices shape data-informed decision-making and the potential use of data for equity-oriented purposes.

Learning Communities as Transformative Environments: Bridging Local Action and Global Challenges

PANEL CONVENORS: Sibilla Montanari (University of Vienna, Austria); Nazime Öztürk (University of Vienna, Austria); Denis Francesconi (University of Vienna, Austria); Evi Agostini (University of Vienna, Austria)

PANEL KEYWORDS: Learning Communities, Community Educational Pacts, Collective Learning

Cooperation between educational institutions and local organizations is crucial for future education. It fosters student and citizen agency, supports the transformation of socio-ecological systems, and drives local changes in response to global challenges. Partnerships among educational institutions, organizations, and collective movements promote the creation of learning communities (LCs), which advance collective knowledge while supporting individual learning. Examples include Italian community educational pacts, Viennese Bildungsgrätzln, and Community Schools in the UK. Despite various frameworks addressing LCs, there is a need to understand how to compare and implement these initiatives. LCs represent a transformative approach to education, emphasizing collaboration and the co-creation of knowledge. They are living spaces of democracy, extending education beyond formal institutions to include informal environments. At a micro level, they consist of individuals who share common goals and engage in joint activities. At a broader level, they function as systems or networks involving groups, organizations, institutions, or collective movements that co-generate knowledge through a collective learning process, offering concrete solutions to current challenges. This panel focuses on LCs as an innovative pedagogy and invites theoretical and practice-oriented contributions on: Pedagogical approaches that promote LCs, such as action research, project and problem-based learning, service learning, debate, or cooperative learning, also integrated with digital tools. Competences necessary to sustain democratic participation and agency development, such as critical and systems thinking, collaboration, and flexibility. Theoretical frameworks for LCs (such as ecological systems theory and socio-ecological approaches), and evaluation strategies and tools. Challenges, opportunities, drivers, and barriers in collective and interorganizational learning.

NATURE-BASED SOLUTIONS (NBS) AS CLIMATE ADAPTATION MEASURES: A GREEN PRIVILEGE FOR SOME SCHOOLS?

Isabel de Maurissens (INDIRE, Italy) · **Maria Chiara Pettenati** (INDIRE, Italy)

Nature-based solution | climate justice | sustainability

One of the central issues in the sociology of education concerns inequalities: a democratic school system is expected to work towards reducing differences in terms of access, learning opportunities, skills, and outcomes. A still underexplored dimension, however, is inequality in access to green spaces. The territorial location of a school can have a significant impact: for some students, contact with natural environments may be almost absent, while for others it represents a genuine “green privilege.” To what extent can municipalities, through their planning instruments (in particular the SECAPs – Sustainable Energy and Climate Action Plans), recognize and compensate for these inequalities by orienting their intervention priorities? (Carrosio and Cogliati Dezza, 2025) Is it possible, for instance, to prioritize the implementation of Nature-Based Solutions (NBS) near schools located in peripheral or highly urbanized areas? Urban climate adaptation measures, including NBS, are never neutral. They can certainly contribute to mitigation and adaptation to the effects of global warming (e.g., depaving, reduction of heat islands, water management, shading, climate shelters), but they can also address a less visible yet crucial phenomenon: the “extinction of experience of nature” (Pyle, 1993). However, when such measures are implemented unevenly—“green enough” in some areas and almost absent in others—they end up creating a structural advantage for certain schools over others. This raises the question of whether a form of “positive discrimination” by municipalities is needed, especially in more fragile contexts, to rebalance profoundly unequal starting conditions. Between recent regulatory frameworks such as the Nature Restoration Law (Regulation (EU) 2024/1991), which urges Member States to restore degraded ecosystems, and the urgency to also “restore” students’ attention (Kaplan & Kaplan, 1989; Kaplan, 1995) and protect their mental health through contact with natural environments, Europe—and progressively its Member States—are responding by recognizing a stronger role for young people. In particular, Italy, with Law No. 167 of 10 November 2025, which introduces the Generational Impact Assessment (GIA) for legislative acts, aims to give greater substance to Article 9 of the Constitution in protecting future generations. From this perspective, climate justice, social justice, and political action converge to strengthen students’ environmental identity (Clayton, 2003) and to restore space for youth activism, calling on young people not only to endure ongoing transformations but also to intervene in the

public sphere with concrete and well-argued proposals (Mansion et al., 2025). A case study is examined in the province of Monza, one of the most urbanized areas in Italy, where two schools, as part of the PAESC Giovani project (INDIRE – EuCliPa.IT), submitted a formal letter to their respective mayors with proposals for NBS to be integrated into the SECAP. In addition, another school asked its municipality to adopt the Covenant of Mayors and, subsequently, the SECAP: this would be one of the first cases in Europe in which a municipal administration is prompted by students from a public school to join the Covenant of Mayors.

FROM LOCAL COMMUNITIES TO GLOBAL CHALLENGES: COMMUNITY LEARNING AND YOUTH PARTICIPATION IN CROSS-BORDER ALPINE TERRITORIES

Paola Menotto (Università degli studi di Torino, Italy) · **Federico Zamengo** (Università degli studi di Torino, Italy)

Community education | Youth engagement | Alpine Territories

Today's world faces socio-ecological challenges of global magnitude that require coordinated international responses, as outlined in the UN 2030 Agenda for Sustainable Development (2015). Although a global perspective is more urgent than ever to address systemic inequalities, climate change, and widespread violence, educational contexts often reveal the need to translate these global priorities into meaningful and operational local processes. Such an "interscalar" approach (Magnaghi, 2020) calls for situated educational processes capable of connecting global visions with concrete community practices (European Commission, 2024). This centrifugal movement – from the local to the global – requires the active involvement of communities, with particular attention to youth engagement to ensure the continuity of civic commitment in the future (UNESCO, 2021). However, their involvement, often more formal than substantive, demands serious commitment at both educational and political levels, as well as their recognition as co-protagonists in territorial decision-making processes (Gallina & Zamengo, 2022). Pedagogical models grounded in community education are especially relevant in this regard, as they foster democratic participation through collective learning and co-construction of knowledge, within a rhizomatic organisation that transcends the boundaries between formal and informal education (UNESCO, 2014). The Alpine context can serve as a laboratory for observing dynamics of community learning. It is a transnational socio-ecological system characterised by urgent environmental challenges, depopulation, and territorial marginalisation, but also by remarkable natural continuity (Alpine Convention, 1991). Within this scenario, young people are the primary actors in out-migration towards urban areas, yet they are also the only ones capable of ensuring the demographic, cultural, and economic survival of local communities (Membretti, 2023), as well as contributing to the development of cross-border strategies for sustainable territorial management in response to global crises (Durand & Decoville, 2019). This contribution presents preliminary findings from an exploratory qualitative study conducted within the framework of the European cross-border project PITER+ Terres Monviso, in the Monviso area between Italy and France. The research involved young people and youth policy practitioners through focus groups and in-depth interviews, investigating – through narrative inquiry (Clandinin et al., 2016)—their educational relationship with the territory, their role within local communities, their sense of belonging to a cross-border space, and the social imaginaries that animate them (Taylor, 2005). The exploratory research also included the active involvement not only of project partners and interview participants, but also of mayors and local administrators, in a perspective of co-construction of research data and complementarity between local actors and researchers (Flick, 2024). In this sense, the territory as a whole becomes attentive to young people, aiming to create a shared approach to cross-border youth policies and overcome the fragmentation of interventions. By situating learning

communities within a socio-ecological and territorial perspective, the study contributes to the debate on democratic community education, showing how collective educational processes can connect local action with global challenges in cross-border Alpine regions.

EDUCATIONAL COMMUNITY PACTS FOR DEMOCRATIC SOCIETY

Martina Bonci (university of macerata, Italy)

Educational community pacts | democracy | common goods

In a time of social division and urban isolation, the idea of "living spaces in democracy" stands out as a crucial way to build strong local communities. These spaces are more than just physical places; they represent democratic practices where people come together for common goals and take part in activities that promote the well-being of everyone. At the core of this concept are Educational Community Pacts, innovative initiatives from Italy based on participatory governance. Established through frameworks like Italy's national guidelines on community pacts (MIUR, 2019), these pacts are official agreements among citizens, schools, families, local administrations, and third-sector organizations to create cooperative spaces focused on caring for and improving shared resources. Following the COVID-19 pandemic, the Community Educational Pact has become a popular tool for school planning. In 2021, the Ministry of Education encouraged its use through the School Plan 2020-21 to fight educational poverty and boost cooperation between schools and local communities. This co-design tool allows schools to become educational hubs that coordinate local services, meeting children's needs more effectively. A good example of this is the V. Bottego school in Milan, which I studied in my research. Here, educators worked with local organizations to redesign the square in front of the school, which had been turned into a parking lot and had lost its original purpose. Among the different redevelopment projects, students helped plant and care for public green spaces. As part of the pact, they gained hands-on experience with an environmental protection group, focusing on maintaining public green areas and managing waste. The impact on the students was significant; after completing the workshops, some children even advised their parents to adopt more eco-friendly habits. In the end, living spaces in democracy, realized through Educational Community Pacts, provide a model for building local communities that are inclusive, fair, and forward-thinking. They redefine democracy not just as elections but as daily acts of collaboration, where shared goals drive joint efforts to care for common resources. By integrating education with civic engagement, these spaces develop informed citizens who can support lively, inclusive communities in the face of global challenges. This approach is relevant worldwide and encourages adaptations in different settings to strengthen democracy from the ground up.

LEARNING COMMUNITIES AS INFRASTRUCTURES FOR A JUST TRANSITION: CLIMATE EDUCATION, YOUTH PARTICIPATION AND MULTI-LEVEL GOVERNANCE

Caterina Vetrugno (Italian Climate Network, Italy)

Climate Education | Just Transition | Youth Participation

Climate change increasingly reveals itself as a governance and learning challenge, where local communities and institutions play a decisive role in translating global commitments into concrete action. From international climate negotiations to local implementation, the effectiveness of climate action depends on the capacity of territories to build learning processes that connect knowledge, decision-making and collective responsibility. This contribution presents the perspective of the Italian Climate Network (ICN), drawing on both educational practices and policy-oriented communication developed through national programmes and engagement in international climate conferences (COPs). Through Missione Aria Pulita, ICN has worked with schools, teachers and students to promote climate and air quality education as a participatory, place-based and civic learning process. Schools are framed as learning communities that foster dialogue between scientific knowledge, lived experience and environmental awareness, strengthening critical thinking, wellbeing and civic engagement among younger generations. Alongside school-based educational activities, ICN also promotes initiatives engaging local administrations, municipalities and community actors through advocacy, dissemination and capacity-building actions aimed at connecting climate knowledge with local decision-making processes. Operationally, these activities are developed through participatory methodologies such as workshops, public discussions and training sessions involving educators, local stakeholders and civil society organisations. Interactive tools, including collaborative exercises and local dialogue formats, are used to connect climate knowledge with everyday urban experiences and policy challenges, supporting shared responsibility and collective learning. These experiences are complemented by reflections emerging from ICN's work on cities and local governments within the COP process, where resilience is understood not as a fixed goal, but as a continuous pathway of adaptation, learning and transformation. Emphasis is placed on multi-level action, cross-sector governance and capacity building as enabling conditions for inclusive climate policies, highlighting the role of communities of practice that connect local authorities, civil society and citizens. Expected outcomes include the engagement of students, educators and local stakeholders, the strengthening of climate literacy and civic participation, and the creation of dialogue spaces between communities and local decision-makers. These processes contribute to awareness-raising within territories and support the integration of educational and community-based perspectives into local sustainability initiatives and emerging policy discussions. By combining climate education, youth participation and local governance perspectives, this contribution reflects on learning communities as critical infrastructures for bridging global challenges and local action. It argues that just transition processes require not only policies and funding, but long-term educational ecosystems capable of sustaining collective learning, shared responsibility and transformative action across scales.

THE RETI PROJECT: ACTORS' PERSPECTIVES ON A COMMUNITY EDUCATIONAL PACT IN PORTO TORRES

Irene Culcasi (Lumsa University, Italy) · **Italo Fiorin** (Lumsa University, Italy) · **Marcello Tellini** (Porto Torres Municipality's social services) · **Maura Benedetti** (Lumsa University, Italy)

Community Educational Pacts | Democratic educational ecosystems | Assessment

In recent years, Learning Communities have emerged as promising socio-educational ecosystems capable of fostering democratic participation, collective knowledge production, and local responses to complex social challenges. Within this perspective, Community Educational Pacts represent an innovative governance model that connects schools, local institutions, civil society organizations, and citizens in a shared educational vision for the territory. This contribution presents the experience of the R.E.T.I. Project – Ricerca Educativa per un Territorio Inclusivo (Educational Research for an Inclusive Territory), a participatory action-research initiative launched in 2021 in the city of Porto Torres (Sardinia, Italy). The project supported the co-construction of a Community Educational Pact involving a wide network of actors: schools from early childhood to upper secondary education, the municipality's social services, third-sector organizations, the pedagogical coordination for the 0–6 early childhood education system, and local citizens. After five years of development, the project has reached a mature phase characterized by the implementation and expansion of the Pact as a local learning ecosystem. At this stage, the initiative has progressively strengthened the involvement of the local community and expanded its scope, particularly through the integration of the 0–6 early childhood education system, thereby reinforcing continuity across educational levels. At the same time, participatory initiatives such as two editions of the Community Educational Pact Festival – "Turris Umpari Edufest" – have fostered broader civic engagement and dialogue among educational, institutional, and community actors. A central component of the process has been the continuous professional and community learning pathway accompanying the Pact. This work was carried out by experts in community psychology and pedagogy from LUMSA University in Rome. Through experiential training sessions and co-reflection meetings, teachers, educators, social and educational professionals, representatives of third-sector organizations and institutions, and citizens developed a shared vision and methodological tools for the co-design of educational and community practices. The methodological framework draws on co-constructive learning approaches. The contribution will present the evaluation phase currently underway, aimed at assessing the impact and perceived value of the Community Educational Pact among participating actors. The evaluation adopts a mixed-methods approach, combining quantitative and qualitative tools. A questionnaire was administered to members of the Pact to explore perceived changes in individual and collective dimensions such as sense of community, participation, and empowerment. In parallel, semi-structured interviews were conducted with representatives of schools, public institutions, and third-sector organizations in order to deepen participants' experiences of the process. In particular, the qualitative investigation focuses on how actors experienced the formation and development of the Pact, how the training and collaborative reflection influenced their professional and civic practices, and how relationships between schools, institutions, and community organizations have evolved over time. By presenting the preliminary results of this evaluation, this contribution aims to advance the debate on learning communities as democratic educational ecosystems, highlighting both enabling factors and challenges in building sustainable school–community partnerships. The case of Porto Torres offers insights into how participatory educational governance and community learning processes can support the development of inclusive territorial networks capable of responding to local educational needs.

THE EDUCATING CITY AS AN URBAN LEARNING COMMUNITY: INCLUSION AND CULTURAL TOURISM IN THE CASE STUDY OF PALMA DE MALLORCA

Alberto Righi (University of Macerata) · **Arianna Taddei** (University of the Republic of San Marino)

Urban Learning Community | Inclusion and Accessibility | Embedded Case Study

Learning Communities and Educating Cities share a foundational promise: to promote inclusion and participation as conditions for democratic education (IAEC, 2020; UNESCO, 2014a; Zorde & Lapidot-Lefler, 2025). However, although inclusion is widely framed as a global challenge and a declared policy objective (UN, 2006; EC, 2021), in real territorial contexts it often takes heterogeneous and sometimes ambivalent forms, oscillating between normative discourse and concrete implementation (Gillovic & McIntosh, 2020; Liasidou & Stylianou, 2024). Starting from this tension, the paper interprets the Educating City as a networked socio-educational system that can be understood within an ecosystemic framework of learning (Bronfenbrenner, 1979; Vélez et al., 2024), and thus as an extended territorial Learning Community. In this perspective, the city is not conceived as an administrative boundary, but as a distributed learning environment in which institutions, cultural organizations, and urban practices co-produce knowledge and redefine forms of participation. Accessibility therefore becomes an indicator of the quality of relationships between microsystems, mesosystems, and governance levels, making it possible to assess whether inter-institutional cooperation generates transformative outcomes. The paper presents a case study conducted in Palma de Mallorca, a city belonging to the International Association of Educating Cities, examined as an urban context with a strong cultural-tourism orientation and a commitment to policies promoting accessibility and participation (Ajuntament de Palma de Mallorca, 2014). The study investigates whether and how inclusive historical-cultural tourism practices – understood as heritage mediation devices accessible to people with disabilities and to diverse audiences – produce educational effects on the local community. Such practices may configure the city as a learning community capable of integrating residents and visitors within shared processes of awareness and participation. From a methodological perspective, the study adopts an embedded single-case design (Yin, 2005), articulated through sub-units of analysis related to practices and devices, and based on multiple sources of evidence: document analysis, direct observation, and interviews (Eisenhardt, 1989). The analysis distinguishes episodic interventions from systemic configurations, emphasizing the documentability of practices, the plurality of experiences, and their pedagogical relevance. The inclusive quality of historical-cultural tourism practices represents a significant indicator of a territory's transformative capacity (Bellato & Cheer, 2021). Inclusion thus acquires pedagogical value when it supports competencies that are essential for democratic participation and the development of agency: critical and systemic thinking, collaboration, and flexibility (Nyanjom et al., 2018; UNESCO, 2014b). Only within such a framework can the Educating City be interpreted as a territorial Learning Community capable of activating processes of collective learning and civic co-responsibility, critically engaging with the global challenge of inclusive equity.

THE FUNCTIONS OF PROFESSIONAL TEAMS IN ADDRESSING THE CHALLENGES OF RECEPTION WORK WITH YOUNG MIGRANTS

Matteo Alpini (Sapienza University of Rome, Italy) · **Francesca Alby** (Sapienza University of Rome, Italy) · **Marilena Fatigante** (Sapienza University of Rome, Italy) · **Cristina Zucchermaglio** (Sapienza University of Rome, Italy)

Community of practice | migrants | social workers

In reception settings, young migrants often arrive with difficult life histories and traumatic experiences that are deeply entangled with ongoing global challenges, from geopolitical conflicts to climate crises and socio-economic disparities. While existing literature often approaches care as an individual relationship, less attention has been paid to the collective practices that underpin educational and care pathways. This ethnographic study explores the work practices, resources, and challenges of practitioners employed in reception services for young migrants in Italy. Although the research did not initially set out to study teamwork as such, the iterative engagement with field data gradually highlighted teamwork as a key resource for addressing everyday challenges in reception work. The study is informed by the perspective of communities of practice (Lave & Wenger, 1991; Wenger, 1998), which offers a conceptual framework for interpreting socially distributed and negotiated practices. The research was conducted at an educational and social community in Rome that hosts approximately 180 adolescents and young adults aged between 16 and 22 each year. The data corpus includes 11 ethnographic visits (approximately 50 hours of observation) and 9 narrative interviews with practitioners and coordinators. Thematic analysis (Braun & Clarke, 2006, 2022) was conducted on observational reports and interview transcripts. The findings show that the work team perform four interrelated functions: (1) consolidating belonging, identity, and shared values; (2) preserving and transmitting practical knowledge; (3) enabling coordination and connectivity across boundaries; and (4) managing critical situations through collective reflection and emotional containment. In this way, the team's local action creates a transformative environment not only for the young people in care but also for the professionals themselves, supporting continuity and long-term sustainability. The analysis also highlights the "costs" of collaborative work. Teamwork is time-consuming, may complicate the inclusion of newcomers, requires continuous negotiation, and can generate conflict, particularly when operational urgencies and institutional constraints limit opportunities for dialogue. The study highlights the importance of investing in both formal and informal team practices as key social infrastructures that sustain coordination, learning, and professional identity in complex, resource-limited care contexts.

TRANSNATIONAL LEARNING COMMUNITIES FOR ACTIVE CITIZENSHIP: LESSONS FROM 'SCHOOLS BEYOND REGIONS AND BORDERS'

Giuseppe Zorzi (University of Trento, Italy) · **Daniela Ferrari** (University of Trento, Italy)

Translocal Learning Communities | Democratic Participation and Agency | Situated Collaborative Pedagogy

In a context marked by democratic backsliding and accelerating socio-ecological crises, Learning Communities (LCs) are increasingly framed as transformative environments that extend learning beyond the boundaries of individual institutions (Agostini 2016). While many LC models are grounded in neighbourhood-based community pacts, we argue that LCs must also be reconceptualized as trans-local democratic infrastructures capable of connecting situated educational practice with broader European civic engagement. Such infrastructures foster student agency and participatory competence through project- and problem-based learning, applied inquiry, and collaborative classroom projects, enabling schools to engage with complex societal challenges while connecting global knowledge to local contexts. We illustrate this principle through Schools Beyond Regions and Borders (SBRB), a transnational Learning Community linking secondary schools across thirteen European countries with universities, regional authorities, and civil society organizations. Drawing on socio-ecological perspectives and the theory of situated learning (Lave and Wenger 1991), we conceptualize schools as nodes within a multi-level learning ecosystem, where knowledge circulates across institutional and geographical scales and is interpreted in locally meaningful ways. SBRB combines centralized access to expert knowledge with locally contextualized classroom projects, enabling students to engage critically with issues such as gender equality, peacebuilding, hate speech, and environmental sustainability, to name a few. While cross-school collaboration is not systematically prescribed yet, the framework already facilitates conditions for trans-local reflection and dialogue, supporting a distributed learning space that balances common thematic engagement with local autonomy. In line with Biesta and Lawy's (2006) notion that democracy is learned through participation rather than transmitted as content, SBRB emphasizes learning processes in which students actively engage with complex issues, interpret them in relation to their local contexts, and apply insights in classroom projects, fostering critical thinking, agency, and participatory competence. Based on observations from student engagement, classroom activities, webinar interactions, and teacher reflections, we discuss emerging patterns shaping trans-local Learning Communities, including the ways global knowledge is locally interpreted, the role of institutional partnerships in sustaining participations, and conditions that enable or limit cross-school collaboration. Building on Wenger-Trayner and Wenger-Trayner's (2020) work on value creation in social learning spaces, our reflections highlight the importance of durable alliances between schools and higher education institutions, strategically supported by digital infrastructures, in maintaining continuity, reciprocity, and the transformative potential of trans-local LCs. Overall, SBRB exemplifies how a Learning Community framework can extend the democratic space of schooling beyond local boundaries while preserving contextual sensitivity. The case demonstrates that multilevel learning infrastructures, combining centralized expertise with locally situated pedagogy, offer a replicable model for schools seeking to foster critical agency, collective knowledge, and active engagement with complex societal challenges.

TRANSFORMATIVE CHALLENGES BETWEEN DECOLONIAL EDUCATIONAL RESEARCH AND LEARNING COMMUNITIES: LONGITUDINAL EXPLORATIONS IN SOCIO-EDUCATIONAL CONTEXTS IN KENYA

Rosita Deluigi (Unimc - Università di Macerata, Italy)

decolonial educational research | co-creation of knowledge | learning communities

The co-production of community knowledge presents the challenge of mutual understanding across languages, cultures and constantly changing contexts. The promotion of Learning Communities (LCs) is also facilitated through pedagogical research oriented towards decoloniality, in which participants can actively engage (Kindon et al., 2017; Lenette, 2022). In this sense, it is worthwhile to develop pathways of 'experiential research' aimed at generating processes and outcomes that have a significant impact on the quality of life within communities, taking into account the diverse characteristics of LCs (Deluigi, 2024; 2026). In this collaborative framework, all participants contribute to the creation of knowledge, guided by objectives shared by an open and dynamic group that identifies with common interests, closely tied to concrete realities (and therefore subject to change). Throughout the various phases of work and self-exploration, a culture of learning is fostered, drawing on joint reflection and auto-ethnographic insights linked to the strategies and actions implemented (Bianchi, 2025; Gariglio, 2025). This leads to the enhancement of widespread learning; consequently, knowledge becomes the group's heritage and does not belong to a single expert figure, often external to the community. Promoting processes of co-creation, in which the agency of those who initiate or facilitate the path is oriented towards fostering active community environments, restores a tangible and recognisable value to participation (Chick et al., 2025; Kapoor-Jordan, 2009). Paradigms that favour reciprocity, moving away from extractive practices, are committed to building spaces for dialogue to be understood as a genuine process of shared consciousness-raising amongst those participating in action research, as subjects and agents of problematising diversity (Freire, 1987; 2010; Glissant, 1996). Decolonial educational research, therefore, fosters plural narrative spaces within LCs, activating non-rhetorical participatory movements (Hare, 2021; Muraca, 2021; Reason et al., 2008). In this sense, LCs become an indispensable subject for animating spaces of co-creation in which social innovation has a transformative value (Fabbri-Capaccioli, 2025; Sarkissian et al., 2010; Zoletto, 2023). These framework elements enable us to retrace consolidated experiential action-research projects between the University of Macerata and several socio-educational services of the Koinonia APS Association, in Kilifi and Nairobi (Kenya), outlining some longitudinal features of participatory perspectives in a multi-faceted manner amongst: researchers who question their own critical positions and engage with many 'elsewheres', initiating explorations and new educational geographies; educators who work daily in the field, in situations systematically marginalised, placing proposals for emancipation and new horizons of a sustainable future at the forefront; university students who choose to be guided through a continuous mediation between theoretical knowledge, prefigurations and the lived experience of community; children, adolescents and young people who experiment with cooperative learning dynamics, charting trajectories of solidarity, peer mentoring and liberation from prescribed marginalisation (Cuccu, 2022; Deluigi, 2019; Deluigi-Cadei, 2019; Deluigi-Gozzelino, 2022; Deluigi-Aruba, 2023). The paper will highlight the dynamic characteristics of decolonial research, engaged in actions that support LCs, which take shape in times and spaces that constantly activate reflective thinking and committed action as factors giving meaning to a 'pedagogy on the move' capable of adopting collateral perspectives.

THE VALUE OF COMMUNITY NETWORKS IN DISADVANTAGED SCHOOL SETTINGS: LESSONS FROM TWO ITALIAN CASE STUDIES

Cristiano Caltabiano (Fondazione Terzjus ETS, Italy)

Community learning | inclusion | associations

In Italy, like other developed countries, the education system faces the challenge of making schools more inclusive and adapted to current social challenges, fostering in particular the integration of children and youth who, for various reasons, are disadvantaged (growing up in vulnerable families or disadvantaged neighborhoods, or being neurodivergent and therefore having specific educational needs). School dropout and poor results in international school tests are the most obvious symptoms of public education's inability to address the most "problematic students". In recent years, a broad national debate has been developed on the need to adopt community pacts at the local level, through collaboration between teachers, families, and civil society associations. Albeit employing different approaches, these initiatives aim to experiment inclusive projects involving students experiencing greater difficulties, by using informal learning techniques, often integrated with conventional classroom teaching activities. The article reviews main research findings on two inclusive school experiences, both initiated by third sector organizations and inspired by the idea that a community learning strategy can be employed in order to improve the academic careers and civic activation of students who are falling behind. The first is Maestri di Strada, an association of educators founded in the 1990s to provide educational opportunities for street children living in Naples' most difficult neighborhoods. La Ricostituente network was created more recently, in 2020, by a social worker with the aim of empowering young people (17-19 years old), including those with traumatic experiences, to express their views on the future of Italy through the rewriting of articles of the Constitution. Drawing on the evidence emerging from the two case studies, carried out with a mix-method research design (narrative interviews with key informants, participant observation and documentation collection), the potential of pedagogical approaches based on cooperative learning, as well as of project and team work, will be explored in depth. Likewise, the genesis of these associative groups and their relationship with educational institutions will be rigorously examined, focusing on another essential factor in making educational practices truly transformative.

SHIFTING EDUCATOR PERSPECTIVES ON CHALLENGING BEHAVIOR THROUGH A RESEARCH–PRACTICE PARTNERSHIP IN RURAL EARLY CHILDHOOD SETTINGS

Cathy Grist (Western Carolina University, United States of America) · **Hannah Thompson** (Texas A & M University) · **Lori Caudle** (University of Tennessee, Knoxville)

Professional learning | Transfomring perceptions | early childhood educators

Challenging behaviors exhibited by young children in early childhood classrooms have been interpreted through a deficit lens in which behaviors are attributed to the child, parenting, or genetic traits. Children from marginalized communities, such as those who are Black, Indigenous, or People of Color (BIPOC), those who have disabilities, or those who live in poverty, are subject to such attributes. In these multilayer perspectives, children who are exhibiting challenging behaviors are seen as being oppositional and intentional rather than as responses to trauma. Trauma is not typically considered a plausible explanation for the behavior (Bartlett, 2019). This presentation examines how early childhood educators who participated in a Research-Practice Partnership (RPP) focused on trauma in professional learning sessions shifted their interpretations of challenging behavior from a deficit lens to responding to the behavior from a trauma lens. This shift facilitated educators' understanding of relational and contextual care. This research explores how an RPP sustained collaborative planning between research and educators, resulting in a relational, trauma-informed lens that supported educators and practices over time. The foundation of this research was based on the framework of an RPP (Arce-Trigatti et al., 2024; Hendrick et al., 2017, 2023). This framework focused on long-term collaboration between educators and researchers to solve complex issues and problems through research on educational improvements and equitable transformations. Another foundational component of this research was based on the framework of SAMSA's guiding principles to a trauma-informed approach, which includes safety, peer support, trustworthiness and transparency, collaboration, and empowerment (SAMSA, 2026). Both frameworks position learning as a collaborative process in which educators transform their beliefs about challenging behaviors through a trauma-informed lens and the impact that trauma has on child development and behaviors. A qualitative case study was used to investigate how educators perceived and described challenging behaviors, and how those perceptions and descriptions evolved after participation in a professional learning community embedded within an RPP. There was one research question addressed in the study: 1) How do early childhood educators' perceptions of challenging behaviors shift over time following participation in a sustained professional learning community? There were 6 educators from a rural community in the Southeastern United States who participated in the study, and data were collected from a qualitative survey before the professional learning community started and again four years later. Participants consisted of both lead teachers with bachelor's degrees and teaching assistants with a two-year degree. Open-ended qualitative surveys that explored participants' descriptions of challenging behaviors that occurred in the classroom, as well as perceptions of trauma-informed care, were used to collect the data. Preliminary results indicated a substantial shift in the perspectives of educators' beliefs about challenging behaviors. Pre-interview results framed challenging behaviors as intentional or caused by poor parenting practices or genetics. Post-interview results revealed a shift in perceptions of challenging behaviors and connected the behaviors to trauma. Participants described implementing strategies that were based on relationships and brain development. These findings indicate that professional learning through an RPP can transform perceptions and practices.

FROM MEDIA LITERACY TO DEMOCRATIC PRACTICE: YOUTH LEARNING COMMUNITIES CONFRONTING DISINFORMATION AND AI

Laura Bullon-Cassis (Geneva Graduate Institute, Switzerland) · **Christine Lutringer** (Geneva Graduate Institute, Switzerland)

Youth participation | Learning Communities | Disinformation

This paper examines DE.CO.DE, a pilot initiative in the Lake Geneva region that positions young people aged 15 to 25 as active agents in strengthening democratic culture in the face of disinformation, deepfakes, and artificial intelligence. Rather than treating media literacy as a technical competence alone, the project conceptualises it as a democratic practice grounded in collective inquiry, public reasoning, and shared responsibility. DE.CO.DE is framed as a multi level Learning Community structured around youth participation and agency. At the micro level, workshops function as youth to youth democratic spaces in which participants critically analyse digital content, examine the political implications of algorithmic systems, and deliberate on norms for responsible engagement in public debate. Pedagogical approaches include problem based learning, debate, and facilitated collective reflection, with a sustained emphasis on voice, reciprocity, and the co construction of knowledge. At the ecosystem level, the initiative connects a university research centre, schools, journalists, youth networks, and civic actors in Geneva and Vaud, forming a cross sector learning community in which young people engage directly with researchers, educators, and media professionals around questions of democratic responsibility in digital environments in Switzerland and beyond. This interorganizational dimension extends democratic learning beyond formal classrooms and situates youth participation within a broader regional process aimed at strengthening democratic resilience. The initiative further integrates journalists with international field experience and a participant cohort composed of both locally embedded youth and international students, deliberately creating a space for the exchange of situated media experiences across diverse political and cultural contexts. By linking youth engagement at the local level to global information disorders, and by connecting both local and international youths living in the region, the paper argues that youth centred Learning Communities can operate as democratic infrastructures that cultivate critical judgement, systems thinking, and collaborative capacities. It also reflects on the institutional and pedagogical conditions required to sustain democratic participation and interorganizational learning over time.

STUDENT CO-RESEARCH, LEARNING COMMUNITIES AND THE DEMOCRATIZATION OF EVIDENCE IN EDUCATIONAL RESEARCH

Juliana Elisa Raffaghelli (Università degli Studi di Padova, Italy)

Learning Communities | Student Co-Research | Democratic Knowledge Infrastructures

Research has repeatedly documented the fragmented, selective, and often symbolic use of educational research in policy and school practice (Edwards-Schachter & Greca, 2017). Evidence is frequently invoked rhetorically, yet only partially translated into collective decision-making or structural change. This persistent gap has been framed, in broader science policy debates, as a manifestation of the “Ivory Tower” problem: the relative isolation of academic knowledge from the social contexts it is meant to serve. In response, frameworks of Responsible Research and Innovation (RRI) and Public Engagement have emerged as attempts to reconfigure the relationship between science and society(Owen et al., 2012; Ceseracciu, 2023). In both concepts, research moves beyond dissemination or consultation; it entails the meaningful involvement of citizens in shaping research questions, methods, interpretations, and uses. However, while these frameworks have been widely discussed in fields such as technology and sustainability, their implications for educational

research remain uncertain and under-theorized. If responsibility and engagement are to be structurally embedded rather than rhetorically endorsed, they require educational practices that redistribute epistemic agency. In the field of teacher education, this opens a crucial possibility: repositioning students not as passive recipients or future "users" of evidence, but as co-researchers participating in the co-production, translation, and circulation of locally relevant knowledge (Timmis et al., 2024). Further pedagogical framing is necessary, though. I therefore build upon the theory of Learning Communities (LCs) presented as democratic responses to global socio-ecological challenges (Montanari, 2025; Francesconi et al., 2024). Pre-service teachers can be conceptualized as boundary actors who traverse institutional domains—universities, schools, municipal authorities—facilitating the movement of knowledge across them. This paper argues that the transformative potential of LCs depends not only on partnerships between institutions and local actors, but on the democratization of educational knowledge itself. Democratic schooling, in this sense, demands infrastructures that enable communities to critically generate, deliberate upon, and act on evidence, rather than merely receive expert recommendations. I hence introduce an empirical case, namely, a course-embedded co-research project involving 134 pre-service primary teachers at the University of Padova. Working in small groups, students designed and administered interviews and questionnaires grounded in European competence frameworks, collecting 383 responses within school networks. A core research item examined how educational research is perceived and mobilized in school innovation processes. Mixed-methods analysis revealed a persistent perception–practice gap: research is rhetorically valued but rarely integrated into collective decision-making. However, stronger orientations toward research use emerged when initiatives were locally anchored, problem-driven, and discussed within proximate decision arenas, suggesting that proximity and deliberative spaces are decisive for uptake. Crucially, the co-research process itself functioned as a Learning Community intervention. Through cycles of co-definition, data production, joint analysis, and member checking, students, faculty, and school actors engaged in structured collective sensemaking. I argue that beyond improving students and schools' awareness on research use, the process cultivated a culture of scientific literacy understood as a collective democratic capacity: the ability of a community to question sources and deliberate on evidence.

"CLASSI IN RETE": A FORM OF EXTENDED SCHOOLING TO SUPPORT TEACHERS' COLLABORATION AND TECHNOLOGICAL SKILLS

Michelle Pieri (Università degli Studi di Trieste) · **Stefano Cacciamani** (Università della Valle d'Aosta) · **Stefania Chipa** (INDIRE - Italian National Institute for Documentation, Innovation and Educational Research, Italy) · **Serena Greco** (INDIRE - Italian National Institute for Documentation, Innovation and Educational Research, Italy) · **Giuseppina Rita Jose Mangione** (INDIRE - Italian National Institute for Documentation, Innovation and Educational Research, Italy)

knowledge building communities · extended schooling · collaboration and technological skills

Introduction "Classi in rete" model uses digital tools (Webex and Knowledge Forum) to enable teachers and students in small schools to participate in new learning experiences and collaborate with other small and "standard" schools through shared planning and joint educational projects (Mangione et al., 2021). Designed to address the geographical and cultural isolation often affecting these schools, the model aims to promote teachers' and students' technological and collaborative skills. The paper focuses on the impact on teachers' skill development, considering evidence (Kormos & Wisdom, 2023) that teachers in small and rural schools often show lower technological literacy and use technology less frequently than

urban teachers. Method The study involved 26 participants: 18 teachers (16 females; M age = 50.06, SD = 10.79) and 8 school principals (7 females; M age = 56.88, SD = 6.94) of small schools in Liguria. Data was collected at the end of the programme through a purpose-built questionnaire with five parallel items for teachers and principals, enabling systematic cross-role comparison. The tool assessed perceived development of teachers' collaborative (3 items) and technological (2 items) competences on a 5-point Likert scale (5 = Completely agree; 1 = Completely disagree). Given the ordinal measurement level and limited sample size, non-parametric inferential statistics were employed throughout. Between-group differences were assessed via the Mann–Whitney U test. Within-group comparisons were examined through Friedman's test; where significant effects emerged, pairwise post hoc comparisons were performed using the Wilcoxon signed-rank test. Differences across the two technological competencies items were evaluated directly via the Wilcoxon signed-rank test. Results The analysis showed consistently high ratings (>3.5 on a 1–5 scale), indicating strong agreement among teachers and school leaders that participation in "Classi in rete" fostered teachers' collaborative and technological competences. No statistically significant differences emerged between the two groups' overall evaluations. For collaborative competences responses considered jointly revealed a significant difference ($\chi^2(2)=10.25$, $p<.01$): post hoc analyses showed stronger collaboration with teachers from other schools (M=4.61, SD=0.57) than with colleagues of the same school (M=4.19, SD=1.06; Z=-2.95, p<.01). For technological competences, no significant differences emerged between the use of the asynchronous (Knowledge Forum) and synchronous tool (Webex). Discussion "Classi in rete" can be framed within the framework of 'extended school' (Mangione et al., 2025) in digital space, where innovation in small schools is shaped by educational spatiality, plurality, and continuity. In this perspective, digital networking becomes a condition that expands educational action beyond geographical constraints. The evidence supports this framework: stronger teachers' collaboration across schools than within schools suggests digitally mediated educational spatiality beyond institutional boundaries. Similar evaluations by teachers and principals indicate shared recognition of competence development (plurality), while comparable gains in synchronous and asynchronous technological competences reflect balanced collaborative practices, supporting educational continuity.

FAMILIES AS PARTNERS: LEARNING COMMUNITIES IN SOCIO-ECONOMICALLY DISADVANTAGED SCHOOL CONTEXTS

Samy-Jo Kuhn (Friedrich-Alexander-Universität Erlangen-Nürnberg, Germany) · **Livia Jesacher-Roessler** (Friedrich-Alexander-Universität Erlangen-Nürnberg, Germany)

Parental Involvement | Community-Based Learning Communities | Educational Inequality

Problem Cooperation between schools, families, and local actors is increasingly recognized as a key element in the development of community-based learning communities (CBLCs). Research shows that especially parental involvement positively influences students' learning outcomes and well-being (Epstein, 1985; Jeynes, 2011). However, educational trajectories remain strongly associated with socio-economic status and migration background, particularly in schools located in socio-economically disadvantaged contexts (low-SES contexts) (Mang et al., 2023; Autorengruppe Bildungsberichterstattung, 2024). These schools often assume broader social responsibilities. However, cooperation with marginalized families remains challenging. Language barriers, institutional distance, and negative school experiences may limit participation (Barce, 2025). In addition, deficit-oriented discourses about schools in disadvantaged areas can obscure structural conditions and hinder inclusive collaboration (Bremm, Klein & Racherbäumer, 2016). Understanding how schools engage families in these contexts is therefore crucial for developing inclusive CBLCs. Purpose This paper examines how parental involvement in SES-schools in Germany is described in the educational research literature and how these practices can contribute to the development of CBLCs. The study addresses three research questions: (1) Which forms of parental involvement are described in SES-schools? (2) Which conditions foster or hinder successful

cooperation between schools and families? (3) Which measures are discussed in the literature to strengthen collaboration? Theoretical Lens The study draws on research on educational inequality and family–school partnerships and connects these perspectives to socio-ecological approaches to learning communities. Within this framework, schools, families, and community actors are understood as interconnected participants in local learning ecosystems shaped by multiple contextual influences (Bronfenbrenner, 1979; Epstein, 2011). Parental involvement is conceptualized not only as support for individual learning but also as a form of collective participation contributing to democratic and collaborative learning environments and to the development of CBCLs (Wenger, 1998). Methodology The study is based on a systematic literature review (Willems, 2020; Engelmann, 2024). In total, 454 publications were screened using a PRISMA-inspired procedure. After title and abstract screening and a full-text review of 62 publications, six empirical studies met all inclusion criteria. The studies were analyzed using structuring qualitative content analysis following Kuckartz and Rädiker (2022). A theory-informed category system synthesized findings on forms of parental involvement, contextual conditions, barriers, and measures. Findings Across the studies, informational formats (e.g., parent meetings or information letters) represent the most common form of parental involvement. Counseling formats such as individual consultations are also widely documented. Additional approaches include participatory structures, cooperative formats, low-threshold offers (e.g., parent cafés), and school-wide initiatives. The studies mainly address families experiencing multiple disadvantages, including poverty, language barriers, educational distance and unstable family conditions. Successful cooperation is associated with trust-building, clear communication, cultural sensitivity, and low-threshold access, while barriers include language difficulties, precarious living conditions, time constraints, and limited trust in institutions. Discussion The findings suggest that parental involvement in low-SES contexts often develops through relationship-oriented and accessible practices rather than formal participation structures. From a learning communities perspective, these practices can serve as entry points for broader collaboration between schools, families, and local actors and contribute to the development of inclusive CBLCs.

HUMAN-CENTRED AI AND COLLECTIVE LEARNING IN SOCIO-EDUCATIONAL COMMUNITIES: INSIGHTS FROM THE TEACH-AI PROJECT

Federica Emanuel (eCampus University, Italy) · **Marco Rondonotti** (eCampus University, Italy)

Generative Artificial Intelligence | Learning Communities | Socio-Educational Services

In recent years, socio-educational systems have increasingly faced the challenge of integrating emerging technologies while preserving the relational and democratic foundations of educational work. At the same time, local partnerships among schools, social services, and community organizations are becoming central to addressing complex global challenges. Within this perspective, learning communities represent a key framework for fostering collective knowledge production, democratic participation, and transformative educational practices. This contribution presents preliminary findings and theoretical reflections emerging from the TEACH-AI (Transformative Educational Approaches for Civic and

Human-centred AI) research project, conducted by the CREDDI research group at eCampus University (Adamoli et al., 2026). The project investigates how generative artificial intelligence is perceived, understood, and potentially integrated within Italian socio-educational services, involving professionals from social cooperatives and community-based organizations. Through a participatory research design combining survey research and action-oriented methodologies, the project aims to analyse current practices and to support the co-development of strategies for a responsible and human-centred integration of AI in educational contexts. The empirical phase of the research involved over 400 workers from social cooperatives distributed across the Italian territory. Data were collected through the PAIR (Participatory AI for Inclusive Relationships) questionnaire (Rondonotti & Emanuel, in press), designed to investigate three key analytical dimensions: capability, referring to professionals' competences to use AI meaningfully; affordance-in-practice, addressing the situated ways in which technological possibilities are activated within everyday work; and sentiment, capturing the emotional and socio-cultural perceptions associated with AI adoption. The results highlight an ambivalent relationship between socio-educational professionals and generative AI. On the one hand, AI is recognized as a potential resource for accessing information, supporting problem solving, and optimizing administrative tasks. On the other hand, participants express concerns about the possible weakening of educational relationships, risks related to data privacy, and the standardization of complex socio-educational processes. This tension reveals a broader challenge for learning communities: how to harness technological affordances without compromising the relational, contextual, and ethical dimensions that characterize educational care (Fiorucci & Bevilacqua, 2024). From the perspective of learning communities, the TEACH-AI project proposes a framework in which technological innovation is embedded within participatory governance processes involving educators and organizations. By adopting action research and collaborative design practices, the project aims to support collective learning processes that enable professionals to critically interpret and shape the role of AI in their contexts. In this sense, learning communities become spaces where technological, pedagogical, and ethical dimensions intersect, allowing local actors to co-construct responses to global transformations (Garkisch & Goldkind, 2025).

CREATIVE CODING FOR INCLUSIVE MAKING: BUILDING TRANSFORMATIVE LEARNING COMMUNITIES THROUGH DIGITAL FABRICATION, MATHEMATICAL THINKING, AND SUSTAINABLE DESIGN

Federica Selleri (Liceo STEAM International Bologna, FabLab Valsamoggia APS)

Learning communities | Digital inclusion | STEAM education

Background Despite growing recognition of STEAM education's importance, significant barriers persist in translating interdisciplinary approaches into inclusive, community-engaged practices. Digital fabrication technologies often remain confined within institutional boundaries. This study examines how creative coding and digital textile design can reconfigure boundaries between formal education, maker culture, and diverse learning communities. Research context The project builds upon theories of learning communities as transformative environments (Wenger, 1998) and maker pedagogy (Martinez & Stager, 2013). Developed by Liceo STEAM International Bologna in partnership with FabLab Valsamoggia, the initiative created a multi-actor ecosystem comprising: high school students in interdisciplinary STEAM curriculum; teachers from mathematics, art, ICT, and design; young deaf adults from Fondazione Gualandi a favore dei Sordi (non-profit institution that shares building with Liceo STEAM); and connections to the international TurtleStitch community. The school-FabLab partnership enabled complementary contributions: pedagogical expertise and curriculum integration; technical infrastructure (digital embroidery machine) and territorial networks. One teacher in dual roles facilitated institutional bridging. Material sustainability was integrated through recovered textiles from ReMida Bologna. The

TurtleStitch community provided methodological inspiration and ongoing dialogue. Bridging local action with global challenges The project addressed interconnected challenges through situated practice. Gender disparities in STEM were engaged through textile arts as an entry point for computational thinking. Environmental sustainability was embedded through circular design and material upcycling. Digital inclusion was enacted through design choices: TurtleStitch's visual programming combined with tactile embroidered outputs created accessible pathways for deaf participants, replacing audio-centric technologies with visual-tactile modalities. Methodological approach and development Students engaged in year-long curriculum activities: exploring mathematical concepts (symmetries, transformations, functions, recursion) through generative pattern design; investigating cultural heritage through computational recreation of geometric traditions; and prototyping sustainable products using digital fabrication. EU Code Week functioned as catalyst and dissemination phase, featuring student-curated exhibitions, workshops for external educators, and collaborative community sessions. Activities extended through two parallel tracks: ongoing curricular integration for design refinement; and regular workshops at Fondazione Gualandi where deaf young adults engaged in collaborative design, with students as peer facilitators. This temporal extension transformed the initiative from bounded event to embedded practice. Pedagogical strategies included Project-Based Learning, flipped classroom, tinkering, and pair programming. Assessment integrated self-evaluation rubrics, collaborative documentation shared as open-source resources, and student-curated presentations. Findings and implications Analysis reveals multi-dimensional transformations. Students demonstrated transitions from algorithmic consumption to generative application of mathematical concepts. Deaf participants accessed technical and creative competencies through universally designed tools. Teachers exhibited evolution toward interdisciplinary facilitation roles. The sustained temporal dimension proves theoretically significant: extending beyond episodic framework into ongoing practice demonstrates mechanisms through which time-bound interventions generate durable institutional transformation. Workshop continuation at Fondazione Gualandi evidences participant co-ownership, contrasting with extractive dynamics typical of school-community partnerships. The study demonstrates that learning communities structured around shared making practices can address structural inequalities through co-construction of inclusive environments rather than deficit-based interventions. Integration of local institutional partnerships with global knowledge communities and challenges offers a replicable model for community-engaged education bridging formal and informal learning through sustained, multi-directional knowledge exchange.

Learning Democracy And Democratic Competencies Through Service Learning And Youth Lead Participatory Methods

PANEL CONVENORS: Cinzia Albanesi (Università di Bologna, Italy); Christian Compare (Università di Bologna, Italy); Patrizia Lotti (Indire, Italy); Diego Di Masi (Università di Torino, Italy)

PANEL KEYWORDS: service-learning, democratic competencies, social justice

Young people criticise schools (and higher education institutions) for the lack of opportunities to have a voice, be listened to and be acknowledged as agentic and owners of power. In these same contexts, youth often feel oppressed by a learning environment that endorses individualism and competition. This type of experience, widespread in Western democracies, can contribute to strengthening the idea that participation is useless and "fictional", that problems should be addressed primarily on an individual basis. This type of experience limits the (perception of) capacity to act collectively on one's own context, thus contributing to the democratic deficit. Is it possible to offer concrete experiences in schools and educational contexts that allow young people to feel like real actors in a democratic process and recognise the possibility of transforming reality collectively? Is it possible to support the development of a sense of citizenship starting from a critical (intersectional) analysis of contexts and the way in which they are inhabited? The panel aims to gather theoretical and empirical contributions that explore how educational practices based on the protagonism of young people implemented in schools and universities contribute to the development of democratic citizenship competencies. The panel welcomes contributions that: - Examine the outcomes of service learning and participatory action research practices, focusing on democratic citizenship competencies, sense of community responsibility, and awareness of systemic injustice. - Examine the group processes that develop through service learning and YPAR practices - Identify the challenges and opportunities that teachers encounter in implementing these practices.

VALUING LEARNERS' VOICE FOR DEMOCRATIC CULTURE: A CASE STUDY ON SERVICE LEARNING WITHIN PLURILINGUAL EDUCATION AT PRIMARY SCHOOL

Giorgia Fattori (Ca' Foscari University of Venice, Italy)

service learning | primary school | Plurilingual Education

The Council of Europe (CoE) recognizes Service Learning (SL) as pedagogical approach that can develop the full range of Competences for Democratic Culture connecting learning, critical understanding and meaningful civic action (CoE, 2018a). These competences are featured as values, attitudes, skills, knowledge and critical understanding that students need in order to live as active democratic citizens (CoE, 2018b). Some of these competences, such as knowledge and critical understanding of language and communication, linguistic, communicative and plurilingual skills, valuing cultural diversity and openness to cultural otherness, link to the field of Language Education with a specific focus on Plurilingual Education (PE). Indeed, PE is essential to education for Democratic Culture; it encourages critical reflection on cultural diversity and promotes language awareness and students' full linguistic repertoire (language of schooling, home and additional languages), valuing their voice in all languages (CoE, 2022). PE has gained great relevance within Language Education in the light of the Multilingual turn in education (May, 2014) and the shift from monolingual to plurilingual perspective prompted in the Common European Framework of Reference for Languages (CoE, 2001, 2020). This innovative change has led to the conceptualization of "Plurilingual Competence" conceived as a set of skills, knowledge and attitudes which shares common features with the Competences for Democratic Culture previously mentioned (Candelier et al., 2012). In this theoretical framework SL could be a valuable pedagogical reference for PE, considering the importance within this field to encourage pedagogical approaches that empower learners, value their voice and develop their autonomy, critical thinking skills, and language and cultural awareness (CoE, 2022, p.16). Despite its value, there is still the need of further empirical studies on the implementation of SL in the foreign language classroom (Rauschert, 2022), especially when referring to primary school students (Porto, 2023) and the plurilingual perspective in Educational Linguistics (Baker, 2019). This paper refers to a PhD research project which has been carried out to fill this empirical gap. The research features an exploratory case study involving 42 primary school students, two teachers and community partners settled in northern Italy. Students, teachers and community partners have taken part in a SL project with a linguistic focus which has been designed following Fiorin (2016), along with methodologies and approaches within Plurilingual Education (Candelier et al., 2012; Carbonara & Scibetta, 2020; Melo-Pfeifer, 2023). The aim of the study is to

gather methodological evidence on the implementation of SL in Plurilingual Education and to study how students', teachers' and community partners' attitudes towards plurilingualism change over the SL project. Qualitative data has been collected with a longitudinal perspective using researcher's journal, students' logbooks, linguistic autobiographies, focus groups with students and interviews with teachers and community partners. This communication intends to present a methodological analysis of the SL project with linguistic focus and the preliminary findings on participants' attitudes towards plurilingualism.

RETHINKING YOUTH PARTICIPATION AND DEMOCRACY: LESSONS FROM THE CINI METHOD

Andrea Plata (Scuola universitaria professionale della Svizzera italiana (SUPSI), Switzerland) · **Furio Bednarz** (Child in Need Institute - CINI Switzerland) · **Eliana Riggio** (Child in Need Institute - CINI India)

Democratic Competencies | Participation | Youth Empowerment

In recent years, democratic education has increasingly questioned symbolic or consultative forms of youth participation that fail to influence decision-making processes (Hart, 1992; Lundy, 2007). International frameworks such as the UN Convention on the Rights of the Child - CRC (1989) and the UNESCO Recommendation on Education for Peace, Human Rights and Sustainable Development (2023) call for participatory models that connect rights, institutional accountability, and transformative learning. From this perspective, child participation is not reduced to "giving a voice" but understood as ensuring that young people can influence decisions impacting their lives (CRC, Art. 12). This paper presents the CINI Method (CINI, 2021) as a child-led participatory framework designed to foster democratic competencies through structured collective action. Grounded in Children's Rights- and Human Rights-Based approaches, the CINI Method positions children not merely as beneficiaries but primarily as rights-holders and legitimate co-decision makers in local governance. It is organised around four interconnected axes—active participation, accountability of duty-bearers, multisectoral convergence, and prevention—implemented through subsequent cycles of sensitisation, institutionalisation, collective analysis, shared prioritisation, planning, implementation of the plan of action for children, and participatory monitoring. Rather than episodic engagement, participation becomes institutionalised within local governance mechanisms, fostering sustainability and mutual accountability between communities and institutions (FXB Center, 2020). The discussion draws on the "Community-led Climate Action" project, implemented in 2025 in a rural area of West Bengal (India) exposed to high climate risks. The initiative engaged approximately 30 villages in integrating children's perspectives into environmental planning. Through the training of peer-leaders (120 children), the use of Social Resource Mapping for identifying local vulnerabilities and resources, and structured collective deliberation processes, children actively contributed to identifying priorities and implementing environmental micro-actions (i.e. waste management, green corridors) embedded

in local governance processes. The initiative explicitly addressed environmental justice concerns by linking children's lived experiences to broader structural vulnerabilities. Findings indicate that, when participation is connected to real decision-making arenas, it operates as a democratic learning process across multiple levels. Children develop competencies related to deliberative dialogue, collective problem-solving, shared responsibility, and awareness of institutional accountability. At the community level, collaborative practices and collective ownership of environmental challenges were strengthened, helping reduce problems, also from an often-neglected child perspective. At the institutional level, structured interaction between young citizens and local authorities created conditions for preventive governance, with potential medium- and long-term effects. Overall, the case study suggests that democratic competencies are most effectively cultivated when participation is cyclical, linked to concrete accountability mechanisms, and embedded in rights-based governance structures. For Western education systems, this entails rethinking service learning and participatory pedagogies not as peripheral initiatives, but as structural components of democratic schooling capable of moving beyond symbolic participation toward shared decision-making power and socially just forms of citizenship (Biesta, 2011).

INTERGENERATIONAL PARTICIPATION IN SCHOOL AND CIVIL SOCIETY: TWO IMPLEMENTATIONS OF THE IPARD APPROACH

Mario Ederoclite (Department of Education Studies, Alma Mater Studiorum University of Bologna, Italy) · **Iana Ivanova Tzankova** (Department of Education Studies, Alma Mater Studiorum University of Bologna, Italy) · **Christian Compare** (Department of Psychology, Alma Mater Studiorum University of Bologna, Italy) · **Cinzia Albanesi** (Department of Psychology, Alma Mater Studiorum University of Bologna, Italy) · **Elvira Cicognani** (Department of Psychology, Alma Mater Studiorum University of Bologna, Italy)

Youth Participation | Intergenerational Dialogue | Participatory Action Research

How are access to voice, the legitimacy of youth claims and decision-making power negotiated in participatory processes involving young people and adults? Starting from this question, this contribution presents the methodological design of two pilot experiences of youth participation developed within the Horizon Europe project SINCRONY (Grant n. 101132459) in Northern Italy. The paper is situated within the debate on youth participation and democratic practices in educational and civic contexts. It adopts an intersectional perspective attentive to how age, organizational position, experience and symbolic capital shape opportunities for recognition and inclusion within participatory processes. Research has shown how these dimensions influence access to decision-making spaces and the distribution of legitimacy within participatory arenas (Laforgue et al., 2022). Within this framework, intergenerational dialogue is understood as a space in which actors occupying different positions negotiate meanings, priorities and forms of participation (Schoem & Hurtado, 2001). The contribution discusses two situated implementations of the IPARD approach (Intersectional Participatory Action Research and Deliberation). The first was conducted in a language-oriented upper secondary school in the city of Cesena and involved approximately eighty students throughout the school year. The process focused on identifying and discussing students' needs related to school life and participation. The second pilot was developed in collaboration with three donation associations in the Emilia-Romagna region. It involved approximately fifty participants: twenty-five young members under the age of thirty-five and twenty-five adult members holding organizational responsibilities. As in the school context, the process was structured around cycles of participatory action research and deliberative workshops aimed at identifying shared issues and exploring possible organizational changes. Across both contexts, the IPARD approach combines participatory action research with deliberative practices designed to make visible and discussable the asymmetries that structure intergenerational participation (Wheeler, Shaw & Howard, 2020). Rather than focusing primarily on outcomes or indicators of effectiveness, the analysis concentrates on the quality of participatory processes and on

the ways in which voice, recognition and authority are negotiated between young people and adults. The paper discusses empirical materials collected during the pilots, integrating the results of a preliminary survey with qualitative data derived from observation grids used during workshops and from focus groups conducted during the process. Particular attention is devoted to how intergenerational dialogue develops and to the conditions that allow young participants to move from consultation to more substantive forms of participation. By examining two different but methodologically connected experiences, the contribution reflects on the use of IPARD as a tool for fostering intergenerational participation across educational and civic contexts.

LEARNING DEMOCRATIC CITIZENSHIP THROUGH A EUROPEAN HOMELESSNESS COUNT SERVICE-LEARNING PROJECT

Annalisa Pasini (UNIVERSITA' CATTOLICA DEL SACRO CUORE, Italy) · **Monica Amadini** (UNIVERSITA' CATTOLICA DEL SACRO CUORE, Italy)

service-learning homelessness social justice

This paper presents a service-learning project embedded in a Social and Intercultural Pedagogy course at a Northern Italian university, developed in the framework of the European Homelessness Count (EHC), a multi-city European research initiative on homelessness. The EHC is a coordinated point-in-time count based on the ETHOS Light typology, combining street counts and surveys in services to generate comparable data for evidence-informed housing and social policies at local, national and European levels. In Italy, the project is led academically by the University of Catania, in partnership with fio.PSD, the national federation of organisations working with people experiencing homelessness, which supports methodological adaptation, national training and the connection between municipalities, third-sector organisations and volunteers. For the 2025 wave, Italian participation includes cities such as Brescia, Catania and Milan, within a wider European network of 35 cities. Within this framework, the service-learning project “A research and solidarity experience on homelessness” engaged students as co-researchers in the Brescia implementation of the EHC. The pedagogical design articulated four interconnected phases: (1) participatory analysis of local needs during course sessions; (2) specialist training on methodological, ethical and communicative aspects of street and service-based data collection; (3) field implementation within multidisciplinary teams during the night street count and in homelessness services; and (4) structured debriefing, reflective learning diaries and co-organisation of a public seminar on homelessness. Students were thus positioned not as passive trainees but as active contributors to a European research process with direct relevance for democratic citizenship and social justice, as the data inform policy debates on severe adult marginality and housing exclusion. Drawing on project documentation, classroom debriefings and students’ reflective diaries, the paper analyses learning outcomes along three dimensions. First, in terms of epistemic and critical awareness, students report a shift from individualised and moralising explanations of homelessness towards structural and intersectional understandings, linking personal biographies to social dimensions, as labour precarity, welfare retrenchment, migration trajectories and housing market dynamics. Second, at the relational and ethical level, students describe the development of intercultural communication skills, a heightened sensitivity to vulnerability in public space, and a more nuanced grasp of privacy and emotional boundaries in research encounters. Third, regarding professional and methodological competencies, the experience strengthened their capacity to engage in community assessment, to use standardised research tools in real-world contexts and to work collaboratively within complex welfare networks. The analysis suggests that participation in an internationally coordinated research project such as the EHC can function as a powerful service-learning device for cultivating democratic competencies in higher education. By combining rigorous research tasks with civic engagement, and by situating students within translocal partnerships between universities, NGOs and public services, the project fosters transformative learning processes and supports the formation of socially responsible professionals committed to social justice and inclusive citizenship.

DEVELOPING DEMOCRATIC COMPETENCIES THROUGH SERVICE-LEARNING: EVIDENCE FROM SIX CASE STUDIES IN UKRAINIAN UNIVERSITIES

Irene Culcasi (Lumsa University, Italy) · **Valentina Furino** (Lumsa University, Italy) · **Maria Cinque** (Lumsa University, Italy) · **Fulvio Natalini** (Lumsa University, Italy) · **Ioana Zagrean** (Lumsa University, Italy)

Service-Learning | democratic competencies | higher education

This study draws on the Reference Framework of Competences for Democratic Culture (RFCDC) developed by the Council of Europe, which conceptualises democratic citizenship as a set of values, attitudes, skills, and knowledge necessary for participating effectively in democratic societies. Within this framework, democratic education requires learning environments that enable students to engage critically with social issues, collaborate with others, and reflect on their responsibilities toward communities. In this view, educational approaches that actively engage students in addressing real social challenges – such as Service-Learning (SL) – have been identified as promising pathways for fostering democratic citizenship. The paper presents the results of a multi-case study analysis examining how university SL practices contribute to the development of democratic competencies, a sense of community responsibility, and awareness of systemic social challenges. The study analyses six SL projects implemented in three higher education institutions in Ukraine: Sumy State University, Ukrainian Catholic University, and Dnipro University. The selected cases represent diverse disciplinary contexts, including medicine, entrepreneurship and digital business, cultural studies, clinical psychology, electrical engineering, and finance. The projects analysed include the following courses: "Child Mental Health Support" and "Entre-

preneurship and Digital Business Communications" (Sumy State University); "Communities of Memory" and "Scientific and Psychoeducational Practice" (Ukrainian Catholic University); and "Energy Management Systems" and "Personal Finances" (Dnipro University). Despite their disciplinary diversity, all projects integrate academic learning with community engagement activities addressing concrete social needs during wartime, while encouraging students' active participation in community life. The research adopts a qualitative multi-case study methodology designed to document and analyse innovative SL practices in higher education. Data were collected using a structured case study protocol including teacher interviews, standardized case descriptions, and documentation of pedagogical practices. Each case was analysed using a shared analytical framework focusing on key dimensions such as learning objectives, forms of community engagement, student participation, and perceived educational outcomes. In addition, a rating tool for identifying good practices in SL was applied to assess the pedagogical quality and transformative potential of the initiatives. The analysis explores how participation in SL projects contributes to the development of competences outlined in the RFCDC, particularly those related to civic-mindedness, responsibility, critical understanding of social issues, cooperation, and engagement with diversity. Particular attention is given to how students interact with community actors, reflect on social problems, and experience collective action as a meaningful form of democratic participation. By presenting comparative insights across the six case studies, the paper contributes to the debate on the role of SL in fostering democratic competencies in higher education. The findings highlight the potential of SL to create participatory learning environments where students can experience democratic processes in practice, while also identifying key pedagogical challenges and opportunities for integrating democratic education into university curricula.

SERVICE LEARNING AND TEACHER TRAINING: ANALYSIS OF A BLENDED LEARNING EXPERIENCE

Paola Zini (Università Cattolica del Sacro Cuore, Italy) · **Simona Ferrari** (Università Cattolica del Sacro Cuore, Italy) · **Alessandro Sacchella** (Università Cattolica del Sacro Cuore, Italy)

service learning | teacher training | blended learning

For Service Learning to be introduced into schools and established as a pedagogical approach capable of supporting and enhancing the development of students' knowledge and skills through their involvement in active citizenship and social participation, it is necessary to train teachers in Service Learning (L. Cadei, D. Simeone, 2022). In particular, an analysis of the literature on the in-service training of teachers in the pedagogical approach of Service Learning reveals numerous practices and experiences linked to pre-service teacher training; initiatives aimed at in-service training, whilst present, are less established in systematic terms (Bornatici & Zini, 2025). It is from this challenge – to train teachers in Service Learning – that the project 'Service Learning: together by a MOOC' was born. To make the training 'sustainable' in terms of time (reducing travel) and costs whilst ensuring the quality of the processes, CREMIT devised the BLEC Model (Rivoltella & Modenini, 2012), an intervention model whose structural features are Blended learning (Graham et al., 2013; Kaleta et al., 2007), E-tivity (Salmon, 2002) and Coaching (Rivoltella, 2006; Ferrari & Triacca, 2020). The use of a blended solution involves designing courses delivered partly in person and partly remotely, employing different teaching methods; e-tivities are small activities that punctuate the course's progression; the key element of the model is the coaching mechanism, namely the presence throughout the course of an expert whose role lies halfway between that of a tutor and that of a

consultant, from whom an external perspective and guidance are sought. Four pillars guided the design of the programme: designing SL according to M.N. Tapia's model (M.N. Tapia, 2006); enabling teachers to foster the learning of both subject-specific and cross-curricular skills, with a view to developing citizenship; revitalising communities of teaching practice; and raising the profile of implemented projects so that they become examples of good practice. The programme is structured around six thematic modules, which cover all the stages that characterise the service learning process: analysis of the context, the local area and its needs; programme design; implementation and execution; documentation and evaluation. In addition, the modules explore how teaching methods evolve within service learning pathways, offering pedagogical approaches to support projects and examining the contribution that digital technology can make. Based on data collected from the monitoring system (initial questionnaire N=147, final questionnaire N=64, analysis of projects and documentation), this paper aims to discuss the training model developed across two different cohorts. In particular, it will focus on teachers' representations of SL and on the training outcomes of the support provided for the design, implementation and documentation of the programme. In addition, the paper aims to describe how the project led to the development of a self-paced MOOC (Ferrari & Triacca, 2023; Ferrari & Merigo, 2026) as a tool for fostering a culture of SL within a Community of Practice framework (Wenger, 1999), which currently involves 136 participants.

Psychopedagogical Perspectives on Motivational Processes and Participation in Contemporary Learning Environments

PANEL CONVENORS: Sara Germani (Link Campus University, Italy); Maria Rosaria Re (Link Campus University, Italy); Sara Gabrielli (Link Campus University, Italy); Mirca Montanari (Link Campus University, Italy)

PANEL KEYWORDS: Motivational Processes, Motivating Learning Environments, Teacher Practices

In a society marked by digital transformation, geopolitical instability and widening inequalities, contemporary learning environments face increasing demands. Schools are expected to promote students' motivation, capability and resources for lifelong learning, preparing them to navigate uncertainty and participate as active and critical citizens. (OECD, 2025). According to Self-Determination Theory (Ryan & Deci, 2017), understanding learners' motivation is central to fostering self-directed and sustained learning over time. Motivational processes flourish when students can act with a sense of initiative, experience themselves as capable of mastering meaningful challenges, promote metacognition and develop relationships in which they feel recognised and supported. Supporting students' motivation requires pedagogical practices that acknowledge learners' perspectives, respond to their interests and allow space for meaningful initiative (Reeve et al., 2022). Active teaching strategies (e.g., cooperative, problem-based or project-based learning) offer opportunities in which motivational processes can unfold, enabling collaboration, negotiated roles, and reinforcing perceived self-regulation and competence. While teachers remain central agents in shaping these dynamics, peer relations and family involvement also contribute to students' sense of belonging and participation in learning. This panel welcomes theoretical and empirical contributions that examine motivational processes across educational levels and contexts. We particularly encourage studies on contextual factors shaping students' motivation (e.g., teacher-student interactions, teaching style, active teaching strategies), also with the support of transversal skills promotion (e.g. metacognition, critical thinking). Contributions addressing teacher-related factors that influence teaching style (e.g., self-efficacy, motivation to teach), as well as the role of peers and families in sustaining engagement and participation, are also welcome.

DESCRIPTIVE FEEDBACK FROM INVALSI NATIONAL TESTS AND STUDENT MOTIVATION TO LEARN

Antonella Mastrogiovanni (INVALSI, Italy) · **Cristiana De Santis** (INVALSI, Italy)

feedback | motivation | national INVALSI tests

Since Ryan and Deci's (2017) studies, we have known that motivation is not represented only by an intensity scale (i.e. having more or less motivation), but also by what drives it. In fact, a distinction is made between intrinsic motivation, which is acting for what interests or pleases you, and extrinsic motivation, which is acting to achieve an external result (Germani, 2025). Intrinsic motivation «constitutes a natural inclination of students towards assimilation, mastery and a spontaneous interest in learning. It does not require external rewards or pressure, but is guided by personal interest, providing a lasting source of satisfaction and pleasure throughout the educational pathway» (Germani, 2025, p. 10). According to Cognitive Evaluation Theory, a theory that forms part of Self-Determination Theory (Ryan & Deci, 2002), interpersonal contexts characterised by communication and feedback systems influence the development of a sense of competence, i.e. the perception of being competent and autonomous. «In other words, when people perceive that they are successful in an activity thanks to positive feedback or optimal challenges, they are more likely to be intrinsically motivated to continue that activity» (Germani, 2025, p. 17). A sense of autonomy (or self-determination) is essential for sustaining intrinsic motivation. Although the feedback provided in the INVALSI certification is not presented in interpersonal contexts, it provides students with information on the text comprehension skills they have developed, based on what they have demonstrated they are capable of doing. This paper reflects on the perceptions of Italian students regarding the descriptive feedback provided in INVALSI's national reading comprehension tests at the end of lower and upper secondary school. This qualitative study takes a descriptive-exploratory approach to investigate whether feedback from INVALSI certification leads students to reflect on their own learning, and whether this reflection affects their motivation to learn in the context of lifelong learning (Ouane, 2003). To this end, semi-structured interviews were conducted with nine students at the end of the first and second cycles of education. These were transcribed verbatim and analysed using thematic analysis (Clarke & Braun, 2016), with the support of Maxqda software. According to the students interviewed, evaluating learning through descriptive feedback is valuable because it shifts the focus from a single test to understanding the learning process. The students assigned the following functions to descriptive feedback: - A diagnostic function, which is useful for identifying the skills demonstrated in an assessment and enabling students to recognise their

strengths and weaknesses. - A prospective function, which is useful for setting future goals and motivating students to achieve higher levels by setting concrete objectives. - A reflective function, which is useful for encouraging critical analysis of study methods and strategies adopted to achieve specific learning outcomes. Therefore, the results, as expressed by the students' voices, show that descriptions of skills achieved in INVALSI certification allow students to reflect on their sense of competence. Descriptions of skill levels that they can still achieve motivate students to guide their future learning.

INTEGRATED TEACHING AND MOTIVATION: PRELIMINARY FINDINGS FROM ONGOING RESEARCH

Alessandro Barca (Università degli Studi Link Campus, Italy) · **Maria Concetta Carruba** (Pegaso University, Italy)

school engagement · self-efficacy · active teaching

In the current pedagogical/didactic debate, participation cannot be reduced to mere “presence” or a set of observable behaviours: rather, it is configured as a relational and cognitive-affective quality of the school experience, articulated in behavioural, emotional and cognitive dimensions (Fredricks, Blumenfeld, & Paris, 2004). In this context, engagement appears to be sensitive both to beliefs of self-efficacy (Bandura, 1997) and to social conditions that support autonomy, competence and belonging (Ryan & Deci, 2000), calling into question concrete teaching choices and classroom management styles. This paper presents ongoing research (academic year 2025/2026) conducted at the 'Pignatelli' lower secondary school in Grottaglie (province of Taranto), in collaboration with three literature teachers, on three second-year classes (N = 67; aged 12–13). The sample includes one student with autism spectrum disorder with high support needs and four students with SLDs. The aim is to explore whether, and to what extent, an integrated teaching device (structured cooperative learning, short authentic tasks, digital micro-narratives and gamification with low technological complexity and high educational intentionality) can affect motivational processes and participation, while preserving accessibility and meaningfulness for heterogeneous profiles. The design is quasi-experimental with pre/post measurements and data triangulation, according to an educational research approach that focuses on consistency between hypotheses, tools and context (Lucisano & Salerni, 2002). On a quantitative level, the Student Engagement Instrument (SEI) is used for the cognitive and psychological component of engagement (Appleton, Christenson, Kim, & Reschly, 2006), accompanied by a brief measure of academic self-efficacy. On a qualitative level, systematic classroom observations, student logbooks and semi-structured interviews with teachers are collected to capture micro-dynamics of participation (turn-taking, quality of cooperation, persistence in the task, experiences of competence). Partial evidence (at mid-term) suggests an increase in dialogic participation in cooperative activities and an improvement in average psychological engagement, with more marked signs in students who were initially 'peripheral' in interactions. Looking ahead, the analysis discusses the conditions and limits of the device's transferability, avoiding 'technological' interpretations: what seems to drive motivation is not only the digital embellishment, but above all the pedagogical and didactic architecture that makes learning a practicable, recognisable and shared experience.

OUTDOOR EDUCATION AND DIGITAL TECHNOLOGIES: PROMOTING METACOGNITION AND MOTIVATION IN STUDENTS THROUGH HYBRID LEARNING ENVIRONMENTS

Alessandra Natalini (Link Campus University, Italy)

outdoor education | technologies | motivation

In recent years, Outdoor Education (Giunti et al., 2021) has established itself as an educational approach that incorporates digital technologies in schools, opening new perspectives for designing hybrid learning environments that integrate direct experience, environmental contact, and meaningful learning. Inspired by the principles of active education developed by John Dewey (2014) and the theories of experiential learning by David Kolb (1984) and place-based education by David Sobel (2004), it emphasizes hands-on practice, exploration, and reflection as central elements of the educational process. At the same time, the growing adoption of digital technologies in schools has opened new perspectives for designing hybrid learning environments that connect physical and virtual spaces. This contribution aims to explore the integration of Outdoor Education and digital technological tools as a means to promote metacognition and student motivation. Additional theoretical references include the Self-Determination Theory by Richard M. Ryan and Edward L. Deci (2023), which identifies autonomy, competence, and relatedness as the pillars of intrinsic motivation, and the studies on metacognition by John H. Flavell (1979), which emphasize the importance of awareness and control over one's cognitive processes. The central idea is that the intentional use of technologies in outdoor school contexts can amplify opportunities for reflection, self-regulation, and active engagement. Through mobile devices, data collection applications, augmented reality tools, digital e-portfolios, and collaborative platforms, students can document field experiences, formulate hypotheses, monitor their learning, and interact with peers in real time. In this scenario, technology does not replace direct experience; rather, it enriches it by acting as a cognitive and metacognitive mediator. For example, recording environmental observations through tablets or smartphones allows for subsequent critical re-elaboration in the classroom, fostering processes of planning, monitoring, and evaluating one's own learning. Moreover, the integration of outdoor and digital dimensions fosters deeper and more lasting motivation, thanks to the possibility of personalizing learning paths, receiving immediate feedback, and making progress visible. Inquiry-based activities supported by technological tools stimulate curiosity and a sense of self-efficacy, increasing both cognitive and emotional engagement. The collaborative dimension, mediated by shared digital environments, strengthens the sense of belonging to the group and the social construction of knowledge. Finally, the contribution proposes an operational model for designing technologically enriched outdoor learning pathways, structured into three phases: metacognitive preparation (definition of objectives and strategies), field experience supported by digital tools, and structured post-activity reflection. This model highlights how the synergy between concrete experience and digital tools can transform the outdoor environment into a laboratory for reflective and motivating learning. In conclusion, the conscious integration of technologies into Outdoor Education represents a strategic opportunity to promote transversal competences, autonomy, and active participation, contributing to a school system capable of combining innovation, nature, and student-centeredness.

TEACHERS' SELF-EFFICACY AND EMOTIONAL INTELLIGENCE: EXPLORING THE IMPLEMENTATION OF SELF-REGULATED LEARNING STRATEGIES IN INCLUSIVE CLASSROOMS

Sara Gabrielli (Link Campus University, Italy) · **Riccardo Mancini** (Link Campus University, Italy) · **Riccardo Sebastani** (Link Campus University, Italy)

Self-efficacy | Emotional Intelligence | Teachers

This contribution presents a study aimed at investigating teachers' perceived self-efficacy and emotional intelligence among pre-service and in-service teachers enrolled in the Italian specialization program for special education support (TFA). In increasingly complex and inclusive educational contexts, teachers are required to combine pedagogical expertise with socio-emotional competencies and a strong sense of professional agency. Within this framework, self-efficacy (Bandura, 1997) and emotional intelligence (Schutte et al., 1998) are considered key dimensions influencing instructional quality and student development. The study draws on Self-Determination Theory (SDT; Ryan & Deci, 2017), which conceptualizes autonomy, competence and relatedness as basic psychological needs underlying motivation and well-being. From an SDT perspective, teachers' perceived self-efficacy can be interpreted as closely connected to the need for competence, while emotional intelligence supports the creation of autonomy-supportive and relationally attuned classroom climates. In turn, such environments foster students' intrinsic motivation and engagement. Particular attention is given to teachers' self-efficacy in implementing self-regulated learning (SRL) strategies in the classroom (Scierri, 2024), understood as the set of cognitive, metacognitive and motivational processes through which learners plan, monitor and evaluate their learning (Zimmerman, 2002). Despite its recognized relevance for academic achievement and long-term engagement, explicit instruction of SRL strategies remains limited in classroom practice. Promoting SRL - through goal setting, strategic planning, monitoring, and reflective activities - is especially relevant in inclusive settings, where differentiated instruction and personalized support are essential. Previous research has shown emotional intelligence to be positively associated with self-efficacy beliefs (Chan, 2004). From this perspective, effective teaching requires the capacity for emotional awareness and regulation in interpersonal contexts, with students, families and colleagues. Teaching therefore involves the responsibility for shaping the relational climate in which learning occurs (Marino et al., 2013). Teachers who feel competent and emotionally equipped may be more likely to adopt practices that nurture students' autonomy and metacognitive awareness, thereby aligning instructional processes with SDT principles. The study aims to explore: (1) the levels of perceived self-efficacy in implementing SRL strategies; (2) the levels of emotional intelligence; and (3) the relationships between these constructs. It is hypothesized that higher levels of emotional intelligence are positively associated with stronger perceived self-efficacy in promoting self-regulated learning. The convenience sample consists of 97 teachers attending TFA courses, including both pre-service and in-service participants. Data were collected through validated self-report instruments assessing perceived teaching self-efficacy - specifically related to SRL implementation (Scierri, 2024) - and emotional intelligence (Grazzani Gavazzi & Antoniotti, 2004). By integrating motivational and socio-emotional perspectives, this research contributes to the ongoing debate on teacher education and professional development. The findings may provide useful implications for the design of initial and in-service training programs, highlighting the importance of integrating socio-emotional training and reflective practices to strengthen teachers' capacity to support inclusive and self-regulated learning environments.

SCHOOL, TERRITORY, AND DATA-INFORMED ALLIANCE AGAINST SCHOOL DROPOUT: IDENTITY, MEANING, AND MOTIVATIONAL PROCESSES AMONG ADOLESCENTS

Marco Giganti (University of Bergamo, Italy) · **Michela Zambelli** (Catholic University of the Sacred Heart, Italy)

meaning in life | identity development | school dropout risk

Navigating uncertainty is one of the central developmental challenges facing adolescents. In a context marked by growing social inequalities, digital transformation, and geopolitical instability, supporting young people in constructing a meaningful life project is increasingly recognised as a protective factor against school disengagement and dropout (Ryan & Deci, 2017). This contribution presents findings from the Giovani SMArt project, a participatory action research initiative funded by Regione Lombardia and implemented in a valley community in northern Italy, involving a near-census sample of 1,229 students (48% male) attending four upper secondary schools (Giganti & Zambelli, 2025). Drawing on a quantitative survey administered, the study examined the prevalence of school dropout risk factors - including migrant background, parental education and occupational status, special educational needs (SEN), and irregular schooling trajectories - and their associations with key psychosocial variables. The research focused particularly on adolescents' sense of meaning in life, measured through the Situational Meaning in Life Evaluation scale (SMILE; Zambelli & Tagliabue, 2024), alongside identity development (U-MICS; Crocetti et al., 2010), life satisfaction, and school climate. Findings reveal that students who chose not to disclose their SEN status reported significantly greater difficulty finding meaning in life, particularly in terms of purpose and values. Girls reported higher levels of search for meaning than boys, suggesting gendered patterns in existential engagement. Students with migrant backgrounds showed greater reconsideration of commitments in both academic and social domains, indicating a more fluid and uncertain identity construction process. Irregular schooling trajectories were negatively associated with satisfaction toward school and self. Among school-context variables, peer support and parental involvement emerged as significant protective factors. Students with higher dropout risk reported lower peer support and lower parental engagement in school life, while those with SEN or migrant backgrounds perceived less cultural acceptance and a weaker democratic climate within their schools and classrooms. These findings informed a co-designed territorial intervention involving schools, social services, third-sector organisations, and local administrations. The data were shared with school principals, social workers, and municipal stakeholders to activate personalised support pathways and growth-oriented activities in sport, music, and the arts. This study illustrates how data-informed participatory research can bridge psychopedagogical knowledge and local practice, supporting the co-construction of environments where adolescents feel recognised, capable of contributing, and motivated to remain engaged in learning.

PROJECT-BASED LEARNING AS A MOTIVATION-SUPPORTING STRATEGY

Ludovico Vespasiani (University of Salerno, Italy) · **Rosa Vegliante** (University of Salerno, Italy) · **Sergio Miranda** (University of Salerno, Italy)

project-based learning | basic psychological needs | self-determination theory

In current learning environments, the need to promote meaningful educational pathways has led to an increasing emphasis on active teaching methodologies. Among these, Project-Based Learning (PjBL; Kokotsaki, Menzies & Wiggins, 2016) stands out as a pedagogical approach capable of placing the student at the center of the instructional process. However, for PjBL to translate into real and profound educational success, it is fundamental to analyze the motivational dynamics that support it. The objective of this study is to investigate the impact of PjBL on student motivation, adopting Self-Determination Theory (SDT; Ryan & Deci, 2017) as the theoretical framework. According to SDT, individuals are

continuously driven by the need to satisfy three basic psychological needs: autonomy, competence, and relatedness, which are considered essential for growth and well-being. When learning environments are designed to support these psychological needs, the foundation is laid to foster a motivated attitude toward study activities (Reeve et al., 2022). From a methodological perspective, a systematic review was conducted with the aim of identifying studies demonstrating the effectiveness of PjBL in terms of satisfying basic needs. Having established specific inclusion and exclusion criteria, the analysis focused on 23 papers that confirm a positive relationship between adequately planned PjBL activities and the enhancement of the needs for autonomy, competence, and relatedness. The analyzed literature thus highlights that the integrated satisfaction of these three psychological needs increases students' autonomous motivation. Within this scenario, the paper also emphasizes how the significant contribution of PjBL does not lie solely in the execution of a "task" or merely in the creation of a final product, but rather in the intentionality with which the process of supporting these needs is nurtured.

TEACHER MOTIVATION AND PARTICIPATION IN INCLUSIVE LEARNING ENVIRONMENTS: A SURVEY OF SPECIALIST SUPPORT TEACHERS

Antonio Balestra (Link Campus University, Italy) · **Maria Grazia Simone** (e-Campus University, Italy) · **Daniela Maggi** (e-Campus University, Italy)

Teacher motivation | Student participation | Self-Determination Theory (SDT)

In contemporary learning environments shaped by digital transformation and widening inequalities, sustaining students' motivation and participation requires pedagogical conditions that foster agency, recognition and belonging, drawing on teachers' motivational resources (OECD, 2025). From this perspective, Self-Determination Theory (SDT) provides a useful framework for understanding how the quality of motivation—particularly when supported by experiences of autonomy, competence and relatedness—may translate into professional dispositions oriented towards more participatory and inclusive teaching practices (Ryan & Deci, 2017), including autonomy-supportive approaches (Reeve & Cheon, 2021; Reeve et al., 2022). This contribution investigates motivational processes among Italian specialist support teachers and examines the links between motivation to teach, perceived professional competence, orientations towards participation-rich practices, and the pedagogical use of technologies from an inclusive standpoint. The study builds on recent national research on specialist support teacher education and competencies, as well as technology-mediated inclusive practices (Balestra et al., 2024a, 2024b; Simone et al., 2025). Data derive from an anonymous online survey administered at the end of the specialisation pathway (Summer 2025; N = 1,579) to participants enrolled in INDIRE-linked training routes for specialist support teaching. The questionnaire (Limone & Simone, 2022) includes 33 multiple-choice items organised into four areas: (1) general profile (e.g., age, qualifications, teaching experience); (2) motivation to teach and perceived competence relevant to the role; (3) teaching and relational experience (colleagues' involvement, the quality of relationships with learners with disabilities and with the class as a group, and relationships with families); and (4) the use of educational technologies from an inclusion-oriented perspective (frequency and purposes of use, perceived effectiveness, challenges, and strengths). Items are formatted as 6-point semantic differential scales; a final open-ended question collects brief reflective narratives designed to elicit professional self-understandings, dilemmas, and perceived enabling conditions. The analysis plan comprises three steps: (1) assessing internal consistency and, where appropriate, exploring the structure of motivational indicators and key sub-dimensions; (2) identifying motivational profiles through person-centred approaches (e.g., latent profile analysis or clustering), distinguishing more autonomy-aligned configurations from more controlled or externally regulated ones; and (3) examining associations between profiles and/or motivational indicators and participation-related variables, including propensity to collaborate with colleagues and families, orientations towards active and inclusive methods (e.g., cooperative and workshop-based approaches), and the use of technologies as mediators of agency and accessibility. Thematic analysis of open-ended responses will triangulate quantitative findings, further clarifying perceived enablers and obstacles in professional practice. The study aims to investigate how

initial teacher education can support the development of a professional identity oriented towards fostering agency and active participation for all learners, offering insights for pedagogical innovation consistent with the values of democratic schooling and with teaching practices capable of sustaining motivation and belonging in inclusive contexts.

Reimagining Democracy in Schools: Pedagogical and Organisational Pathways to Participatory Renewal

PANEL CONVENORS: Giulia Pastori (University Of Milan-Bicocca, Italy); Maria Ranieri (University Of Florence, Italy); Valentina Pagani (University Of Milan-Bicocca, Italy); Maria Sola Piccioli (Action Aid International)

PANEL KEYWORDS: Student Participation & Agency, Participatory School Governance & Teaching, Democratic Pedagogies

In today's post-democratic condition, democratic institutions formally persist while meaningful participation is hollowed out—undermined by political disillusionment, inequalities, elite dominance. Schools mirror this erosion: student representation bodies often prove ineffective or symbolic; democratic routines are fragmented; dialogic and participatory practices remain marginal within transmissive, performance-oriented cultures of schooling. At the same time, young people struggle to find spaces for socio-political engagement, even as global crises—war, climate collapse, social injustices—rekindle collective mobilization and a renewed desire for public voice. How does the school accompany or inhibit this democratic reawakening? Can it become a site of democratic renewal, and under what pedagogical, organisational and relational conditions—internally and in relation to the wider community? In line with European frameworks (Council of Europe, 2016), the panel invites contributions examining how schooling can counter post-democratic dynamics drawing on insights from democratic education (e.g., Dewey) and contemporary analyses (Fielding, 2012). Particular attention is given to pedagogical and participatory innovation—including participatory research pathways, joint student–teacher committees, participatory budgeting, and co-decision processes—that position students as epistemic agents and legitimate stakeholders in school governance (Cook-Sather, 2020; Zambeta et al., 2019). These approaches resonate with the conference's dual lens: Learning for Democracy, centred on democratic competences, and Democracy for Learning, which treats democracy as an organising principle of educational environments. We welcome empirical research proposals that analyse what hollows out participation in schools, the constraints that limit innovation, and the possibilities for reconfiguring schools as living democratic spaces—capable of accompanying students in the everyday practice of citizenship.

A PARTICIPATORY RENEWAL PATHWAY IN SCHOOLS: STUDENT VOICES FROM AN INTERCULTURAL PEER MENTORING PROJECT

Matteo Umbro (University of Rome "Tor Vergata", Italy)

Participation | Intercultural Peer Mentoring | Democratic Culture

According to the voices of the students involved, can an intercultural peer mentoring project foster greater coherence between schools and their democratic and transformative vocation? This paper presents a case study conducted in a high school located in a public housing neighbourhood on the outskirts of Rome, characterised by significant economic and social hardship. The school, attended by approximately 2000 students across two campuses, is often portrayed as an "island" within the local context because of the academic outcomes achieved by its highest-performing students and its

positioning in private agency rankings. At the same time, it is marked by deep contradictions: many students living in the neighbourhood do not reach graduation, and a substantial number of students without Italian citizenship, whose presence is frequently problematised by both teachers and peers, leave school early, in continuity with patterns observed at the national level. Within this context, following a decision by the collegial bodies and the establishment of an "Intercultural commission", the school launched an experimental intercultural peer mentoring project. The initiative involves enrolled students in welcoming newly arrived peers, supporting them during the initial phase of school insertion, and listening to their concerns, which are understood as epistemic resources for rethinking school practices, organisational arrangements, and everyday routines. The project aims to make the institution more accessible, dialogical, and responsive to students' subjectivities, while also addressing school dropout. For the participants, and with broader implications for the institution, the experience constituted a space for personal commitment and for the development of competences necessary for participation in democratic contexts and institutions (Barrett, 2021), thus functioning as a device for learning for democracy. The study seeks to understand the meanings that young participants attribute to their peer education experiences and the forms their participation takes within an intercultural peer mentoring project. Adopting a perspective attentive to student voice, student participation was examined as a research object in its own right and analysed in light of Fielding's (2012) patterns of partnership (see also Grion & Cook-Sather, 2013). Methodologically, the study adopts a qualitative, ethnographically oriented approach (Pastori, 2017), combining observation and self-observation tools based on trifocal grids related to democratic culture competences (the related outcomes are discussed elsewhere) with interviews, logbooks, backtalk, meeting records, and focus groups involving teachers, the project team, school leadership staff, and, most importantly, the young participants. The textual corpus was analysed through Reflexive Thematic Analysis (Braun & Clarke, 2019; Pagani, 2020). The findings show how the project simultaneously functioned as a space for learning democratic competences (learning for democracy) and, under specific organisational and relational conditions, reconfigured participation itself as the organising principle of the educational experience (democracy for learning), while also revealing tensions between symbolic recognition and actual decision-making power, as well as the ambivalent role of adults as both facilitators and gatekeepers of participation.

STUDENT PARTICIPATION IN SCHOOL GOVERNANCE: A CRITICAL LITERATURE-BASED REFLECTION ON DEMOCRATIC SPACES

Mafalda Villa (Universidade Nova de Lisboa, Portugal) · **Susana Batista** (Universidade Nova de Lisboa, Portugal)

Student Participation | Youth Agency | Democratic School Governance

Over the past two decades, student participation has gained prominence in educational research and is widely recognised as a key condition for promoting school democracy, youth agency, and civic development (Sousa & Ferreira, 2024). The literature highlights the positive impacts of valuing students' voices on their holistic development, the improvement of educational relationships, and the functioning of school institutions, with benefits extending to teachers and the school community (Biddle, 2019; Cook-Sather, 2020; Geurts et al., 2024). Within the European context of decentralisation and strengthened school autonomy, school governing bodies stand out as formal spaces for student participation in democratic governance. They bring together different educational actors, yet vary in their degree of formalisation, competences, and decision-making power, depending on political and social contexts (OECD, 2024). Persistent ambiguities in the implementation of student participation within school decision-making bodies are identified: representation tends to be restricted to secondary students; power remains centralised in principals and teachers; and there are limitations to the deliberative potential of collegial bodies, as these are often reduced to formal or symbolic dynamics (Andersson, 2019; Elemen, 2015; Kaba, 2001). In this context, this communication presents a literature review examining how recent

research has conceptualised and problematised student participation in formal school governance bodies, as well as the proposals that have emerged for consolidating it as an effective democratic practice. The review maps the literature and synthesizes the recommendations put forward by these studies, addressing the need to deepen knowledge on effective forms of student participation (Mager & Nowak, 2012). Publications from 2010 onwards were selected from journals indexed in Scopus, Web of Science, and ERIC to ensure an international perspective. The Portuguese Open Access Scientific Repository network (RCAAP) was also considered to include national and local contexts. Publications in English, Portuguese, and Spanish were included, covering empirical and theoretical studies on student participation in formal school governance bodies, with explicit attention to decision-making processes. The analysis is based on a critical and comparative reading, combining thematic coding and categorisation with strategies of connection (Maxwell, 2009) to identify conceptual patterns, analytical tensions, and recurring limitations in the enactment of student participation. The results contribute to rethink the current design of school decision-making spaces. These are understood as social spaces of democratic governance, where power relations emerge and are contested (Sarmento et al., 2007), and from which it is possible to question the school form (Vincent et al., 2001). It starts from the assumption that "participatory devices" (Sarmento et al., 2007) hold the potential to counteract the rigidity of a school structure historically oriented towards control and conformity (Lima & Afonso, 1990). The aim is to understand how spaces of silence can be transformed into spaces of voice, moving beyond symbolic representation and enabling forms of effective student participation, thereby contributing to the panel's central question: can schools become a site of democratic renewal, and under what pedagogical, organisational and relational conditions?

THE "TOGETHER" METHODOLOGY: STRENGTHENING CHILD AND YOUTH PARTICIPATION IN PUBLIC DECISION-MAKING.

Margherita Brasca (SOS Villaggi dei Bambini ETS, Italy) · **Marcela Baxanean** (SOS Villaggi dei Bambini ETS, Italy)

Student Participation & Agency | Democratic Pedagogies | Peer Education

While the right of children to participate is enshrined in Article 12 of the UN Convention on the Rights of the Child (CRC), a significant gap remains between theoretical recognition and daily practice. The "Together" methodology, developed by SOS Villaggi dei Bambini in the framework of a EU co-funded project, is designed to transform the right of children and young people to participate from a theoretical principle into a concrete practice within public decision-making processes.

The project specifically focuses on strengthening the capacity of children and youth—including those in precarious family situations or alternative care—to influence decisions that affect their lives and local communities. The methodology is rooted in international legal standards. A core tool used is Roger Hart's Ladder of Participation, which helps distinguish between "seeming" involvement (manipulation, decoration, tokenism) and "meaningful" participation. The methodology also incorporates the Lundy Model to structure how children and youth are provided with space, voice, audience, and influence in public spheres. This approach aims to improve the capacity of children, young people, and the professionals supporting them to work in partnership with policy-makers. It seeks to ensure that youth can influence public decisions that impact their lives, moving from mere consultation to active co-design. Aside from adult supervisors, the methodology relies on two primary levels of youth engagement. The first one is the involvement of peer trainers (aged 18–24), young people who, after receiving specialized training, propose and directly manage workshops for their peers. They act as a bridge between professional facilitators and younger participants, ensuring the language and activities remain relevant and engaging. The second one is the protagonism of workshop participants (aged 11–17), who engage in territorial workshops to deepen their knowledge of children's rights and improve their awareness of how to influence public policy even when still underaged. The peer-to-peer workshops typically consist of six sessions, guiding participants from understanding their rights to meeting with adults to deliver their messages. This approach offers unique benefits over traditional adult-led models. Participants often feel freer to express themselves when the facilitators are close to them in age, reducing the hierarchical pressure typical of adult-youth relationships. Also, they have the chance to evolve from "beneficiaries" into "active citizens," practicing participation as a skill. It fosters intergenerational dialogue, proving that young people are competent interlocutors capable of making public policies more inclusive and effective. "Together" engages children in ongoing dialogue with local, regional and national institutions to promote the creation of effective and shared synergies. This dialogue is, indeed, the culminating moment where children meet with institutional representatives to propose concrete solutions. Ultimately, "Together" demonstrates that involving young people generates agency, empowerment, and more inclusive public policies that better reflect the needs of all citizens. The methodology's practical insights, based on the feedbacks and experience on the field, are summarized in a vademecum for adults, identifying six pillars for effective participation.

CHALLENGING ADULTCENTRISM THROUGH PEDAGOGICAL "COUNTER-MOVEMENTS": THE CASE OF THE CLOSLIEU SETTING WITHIN A PUBLIC MONTESSORI PRIMARY SCHOOL

Maura Tripi (Lumsa University, Italy) · **Alessia Trivigno** (University of Milano-Bicocca, Italy)

adultcentrism Montessori Stern

This paper addresses adultcentrism in education by weaving together a critical theoretical framework, contemporary pedagogical contributions, and an empirical case study situated within an Italian public Montessori primary school. Adultcentrism – understood as the structural and symbolic primacy of adult perspectives, norms, and power in shaping children's lives – continues to permeate formal schooling, often legitimising asymmetrical authority and limiting children's agency. Closely intertwined with this is the legacy of "black pedagogy," theorised by Katharina Rutschky (2015/1977) and further elaborated by Alice Miller (2007a/1979; 2007b/1980), which exposes authoritarian, disciplinary, and moralising

practices embedded in educational traditions. Although often subtle in contemporary schooling, these dynamics persist through evaluation regimes, behavioural control, and "epistemic injustice" that privilege adult power over children's lived experience. Building on the childist and anti-adultist approach and its most recent contributions (Biswas at al., 2024; Liebel and Meade, 2025; Tripi, 2025), the paper highlights pedagogical "counter-movements" capable of challenging adultcentrism within school institutions. Childism emphasises children's protagonism, intergenerational dialogue, and institutional reflexivity as key strategies to unsettle adult monopolies of interpretation and decision-making. Overcoming implicit power dynamics in schooling requires not merely methodological adjustments but a transformation of educational stance: practices such as shared rule-making, negotiated curricula, participatory assessment, and the cultivation of aesthetic and expressive spaces emerge as concrete modalities for redistributing power and recognising children as epistemic subjects. In this context, the professional experience of Pia Burei Bozzini (1939–2024), a primary school teacher, trainer at the Opera Nazionale Montessori and expert practicienne trained in close collaboration with Arno Stern, represents a significant example of how methodological contaminations can generate original and authentic educational practices, rooted in the professional biography of the educator. The case exemplifies a response to the need to unsettle sedimented educational hierarchies and to reconfigure entrenched adult–child power relations within the school context. The Closlieu, a dispositif conceived by Stern (Stern, 1959/1966) as a necessary alternative to school-based art education, is grounded in safeguarding the "Play of painting" (Stern, 2011/2013) within a protected, structured space removed from judgment, evaluation, and interpretation. The introduction of this expressive setting into the Montessori primary school "Balilla Paganelli" in Cinisello Balsamo (MI) constitutes a consciously non-orthodox choice with respect to both pedagogical approaches, motivated by the belief in a meaningful connection between them. On the one hand, Montessori education already challenges adultcentrism through prepared environments, auto-education, and respect for the child's rhythm. On the other hand, the Closlieu radicalises this stance by suspending curricular intentionality altogether, offering an experience where expression is decoupled from performance and assessment. Within the institutional setting, this dispositif functions as a micro-political space that interrupts dominant logics of productivity and normalisation, allowing children to inhabit school differently. The paper argues that overcoming adultcentrism requires creating "protected heterotopias" within schools, alongside cultivating an adult posture of ethical restraint, attentive presence, and institutional self-critique. The integration of the Closlieu within a Montessori public school illustrates how this hybridisation can foster transformative possibilities for reconfiguring power, voice, and recognition in everyday schooling.

FROM LEARNING FOR DEMOCRACY TO DEMOCRACY FOR LEARNING: RETHINKING SCHOOL THROUGH STUDENT VOICE

Giulia Pastori (University of Milano-Bicocca, Italy) · **Valentina Pagani** (University of Milano-Bicocca, Italy) · **Chiara Paganuzzi** (University of Milano-Bicocca, Italy) · **Alessia Lambicchi** (University of Milano-Bicocca, Italy)

Student Voice | Mixed-methods | Participation

In contemporary post-democratic contexts, democratic institutions formally persist while meaningful participation is hollowed out. Schools reflect this condition: student representation often operates symbolically, participatory routines remain procedural, and performance-oriented cultures marginalize dialogic engagement. The key question, therefore, is not only whether schools teach democracy, but whether they are organised democratically. Grounded in the Student Voice framework (Cook-Sather, 2020; Welty & Lundy, 2013) and democratic education traditions inspired by Dewey (2000), this

paper presents findings from La scuola siamo noi! ("We Are the School!"), developed within the PNRR-MUSA initiative (2023–2025) in three upper secondary schools in Milan. Conceived as a participatory research pathway, the project positioned students and teachers as co-inquirers, recognising students as epistemic agents and legitimate stakeholders in school improvement and governance (Pastori & Pagani, 2025). In its first year, an explanatory sequential mixed-methods design (Creswell & Plano Clark, 2007) combined a survey on school climate, voice, and participation (2023/24) with eleven focus groups aimed at deepening students' experiences of recognition, influence, and marginalisation. In the second year (2024/25), mixed student–teacher groups engaged in participatory research pathways to co-develop and experiment with proposals for school improvement, transforming the project into a democratic laboratory. Findings reveal tensions between formal participatory structures and students' limited impact on decision-making. Participation remains largely consultative, constrained by bureaucratic and hierarchical cultures. Yet the research process itself functioned as a democratic micro-practice, fostering relational shifts, organisational experimentation, and enhanced agency. Democratic renewal in schools requires more than fostering civic competences (Learning for Democracy); it demands organisational reconfiguration so that democracy becomes an organising principle of school life (Democracy for Learning) (Dewey, 2000; Gollob et al., 2010).

TOWARDS AN ECOSYSTEMIC MODEL OF GLOBAL CITIZENSHIP EDUCATION: BETWEEN THE CAPABILITY APPROACH AND PARTICIPATORY PRACTICES

Valeria Catania (Università di Catania, Italy)

Global Citizenship Education (GCE) | Ecosystemic educational model | Participatory didactic practices

This contribution, situated within the framework of ongoing doctoral research, proposes an ecosystemic model of Global Citizenship Education (GCE) oriented toward the transformation of school practices and the construction of enabling environments. The objective is to overcome the conceptual ambiguities that characterize the international debate (Oxley & Morris, 2013; UNESCO, 2015) and to offer a theoretical-operational framework capable of guiding schools and teachers in the design of authentic, sustainable, and institutionally rooted participatory experiences. Indeed, in the absence of a solid epistemological foundation, civic education risks being reduced to a formal device or an isolated disciplinary content, devoid of any effective transformative impact. The proposed model integrates four theoretical traditions rarely brought into dialogue: Dewey's educational pragmatism, Makiguchi's value-creating pedagogy, Nussbaum's Capability Approach, and Kolb's experiential learning cycle. This convergence allows for the reconfiguration of citizenship not as a static set of competences, but as a continuous formative experience built through practices of participation, reflection, and shared responsibility. The aim is to outline a theoretical framework capable of configuring GCE as a "pedagogy of the gaze" oriented toward the deconstruction of egocentric and nationalistic perspectives, re-configuring it as a process of human development, democratic participation, and social value creation (Bertolini, 1988). The model is organized according to a logic of progressive scalability, which allows educational institutions to implement GCE as a multi-level process. On a didactic level, this translates into participatory activities such as micro-deliberations, service learning, local area investigations, and practices of intercultural cooperation. On a reflective level, it introduces devices such as civic portfolios, narrative rubrics, and learning diaries, which support processes of critical awareness and personal agency. On an institutional level, the model is rooted in the Whole School Approach (Henderson & Tilbury, 2004), promoting a systemic transformation that involves curriculum, governance, educational relationships, and collaboration with the community. From an evaluative standpoint, the model adopts the twenty descriptors of the Reference Framework of Competences for Democratic Culture (Council of Europe, 2018) as an interpretative structure to orient assessment toward a

formative and process-oriented dimension. This allows for the monitoring of not only outcomes but, above all, the developmental processes of values, attitudes, and competences linked to democratic citizenship. Each level represents an expansion of the school's capacity to configure itself as a democratic ecosystem, in which agency, participation, and reflexivity are sustained by coherent didactic practices, evaluative tools, and organizational structures. The emerging implications highlight how dialogic and participatory approaches can reconfigure the school as a lived democratic space, where the agency of students is supported by reflective, collaborative teaching practices open to the world. In this perspective, the role of teachers assumes a crucial significance: through a professionalism oriented toward research, the care of relationships, and shared design, they become co-constructors of enabling contexts. This vision aligns with the perspective of "porous didactics" (Tarozzi & Moser, 2025), which interprets the school as an open, dynamic institution interconnected with global challenges.

UNDERSTANDING YOUTH POLITICAL DISENGAGEMENT: PERSPECTIVES OF FINAL-YEAR SECONDARY SCHOOL STUDENTS

Nikola Baketa (Institute for Social Research in Zagreb, Croatia) · **Jelena Matić Bojić** (Institute for Social Research in Zagreb, Croatia) · **Lorelaj Lukačin** (Institute for Social Research in Zagreb, Croatia)

Political disengagement | Youth | Socialization

Youth political participation has long been considered a crucial component of democratic stability. Habits of civic and political engagement developed during adolescence often persist into adulthood, shaping long-term patterns of participation. However, a large body of research suggests that younger generations increasingly participate less in conventional political activities than previous cohorts (Flanagan & Levine, 2010; Kitanova, 2020; Sloam & Henn, 2019; Suni & Mietola, 2023; Weiss, 2020). Declining trust in political institutions and limited engagement with traditional political organizations are frequently interpreted as signs of a broader crisis of representative democracy (Bessant, 2004; Furlong & Cartmel, 2012; Foa & Mounk, 2016). At the same time, scholars have pointed out that young people continue to engage with politics through alternative forms such as digital activism, issue- based campaigns, or community initiatives (Guzman Grassi et al., 2024). While these patterns are well documented quantitatively, much less attention has been devoted to how young people themselves explain political disengagement. This paper addresses that gap by exploring how final-year secondary school students understand and interpret political disengagement among young people. Focusing on this specific age group is particularly relevant because they stand on the threshold of gaining formal political rights. The analysis is based on qualitative data collected through twelve focus groups conducted in four major Croatian cities (Zagreb, Rijeka, Split, and Osijek). A total of 90 students participated, representing three different educational tracks: grammar schools, four-year vocational programmes, and three-year vocational programmes. Focus groups were carried out in school settings and followed a semi-structured protocol addressing political participation, political efficacy,

youth engagement, and perceptions of politics. The data were analysed using thematic analysis (Braun & Clarke, 2006; Joffe, 2012) combining deductive and inductive coding to identify recurring patterns in participants' explanations of political disengagement. The results reveal five key themes through which students interpret youth political non- participation: socialization, cynicism and distrust, distance from politics, perceived negative consequences of political engagement, and feelings of powerlessness. Participants frequently attribute disengagement to socialization processes within families, schools, and media environments that frame politics as conflictual and negative. Widespread cynicism toward political actors and institutions, often associated with corruption and unfulfilled promises, further contributes to distrust in the political system. Politics is also commonly perceived as distant from young people's everyday lives and interests, which reduces its perceived relevance. In addition, students describe political engagement as socially risky, potentially leading to stigma and interpersonal conflict. Finally, many participants express a strong sense of political powerlessness, characterized by the belief that young people's voices are ignored and that political action rarely produces meaningful change. Taken together, these findings suggest that youth disengagement should not be interpreted primarily as apathy or lack of interest. Instead, students describe political disengagement as a rational response to a political environment perceived as unresponsive, socially risky, and poorly connected to their everyday experiences. The study contributes to existing research by highlighting how young people themselves interpret the mechanisms that produce political distancing, thereby offering new insights into the relationship between political socialization, political efficacy, and youth engagement.

THE STUDENT'S VOICE: A THREE-YEAR STUDY IN A SCHOOL UNDERGOING PERSPECTIVE CHANGE ANALYSIS OF A SCHOOL TRANSFORMATION: INNOVATION IN LEARNING ENVIRONMENTS AND OVERCOMING SOCIOCULTURAL PREJUDICE

Lucia Tagliaferri (Scuola Secondaria di primo grado, Dante Carducci Piacenza Italy) · **Filippo Rebecchi** (Scuola Secondaria di primo grado, Dante Carducci Piacenza Italy)

learning environments | equity | student's voice

This study analyzes the process of pedagogical and structural transformation at the Dante-Carducci Institute in Piacenza, with a specific focus on the Carducci branch. Set in an urban context of over 103,000 inhabitants with high migratory density, the Carducci site has historically contended with marked sociocultural prejudice. This phenomenon led local families to systematically prefer the Dante site, resulting in de facto segregation and the formation of classes with a high

percentage of non-Italian speakers and widespread economic marginalization (Sandri 2019). This dynamic long hindered the heterogeneity necessary for truly effective and inclusive educational action. To address this, beginning in the 2023-24 academic year, the institute introduced a new organizational model aimed at moving beyond the fixed-classroom system. In its place, disciplinary and thematic learning environments were established (Armenakis, et al., 1993; Biondi, Borri, Tosi, 2016; Marcarini 2016). In this paradigm, teachers remain in specific specialized spaces while students transition between classrooms at the end of each period. This physical movement is interpreted not as a mere transition, but as a strategic opportunity for attentional recovery and the promotion of individual autonomy. The reconfiguration involved creating innovative spaces, including the Biblòh library network (biblioteche in rete) and the Habitat multi-space (Imms, Kvan, 2022), designed to meet Special Educational Needs (Bisogni Educativi Speciali - BES) and consolidate a multicultural ethics of responsibility. The efficacy of this experimentation was monitored through the three-year longitudinal study "The Student's Voice" (Grion, Cook-Sather, 2013; Quaglia, Corso, 2014). Adopting a qualitative research approach (Mertens, 2014; Trinchero, 2015; Jones, Smith, 2016), the study integrated an annual 21-item questionnaire (Marcarini 2023) and a case study based on monthly focus groups. These groups involved approximately 50 students in leadership roles (Apri-fila and Assistenti), establishing a structured space for dialogue where student feedback directly informed didactic and educational adjustments. By the end of the three-year period, results confirmed the success of the initiative: enrollment increased from 120 to 143 for the 2025/26 academic year, fostering more equi-heterogeneous classes and signaling a progressive overcoming of territorial prejudices. Although perceived well-being improved, operational challenges persist, such as resistance from some staff (particularly support teachers) and logistical difficulties regarding backpack management due to the lack of lockers. In conclusion, the Carducci school experience, functioning as a "permanent construction site" (cantiere permanente) of innovation, demonstrates that structural spatial change is an essential prerequisite for educational equity (Woolner, 2010; Barrett et al., 2015). Transforming the school into a lived democratic space allows the student voice to be valued as a pivotal element for defining both didactic and spatial practices (Woolner, 2010; Barrett et al., 2015).

SCHOOL LIBRARIES AND DEMOCRATIC LEARNING ENVIRONMENTS: EVIDENCE FROM A NATIONAL ITALIAN SURVEY

Andrea Nardi (INDIRE, Italy) · **Elisabetta Cigognini** (INDIRE, Italy) · **Francesca Pestellini** (INDIRE, Italy)

School libraries | Democratic education | Participatory learning environments

In recent years, the school library has increasingly been reinterpreted as a "third learning space" (Elmborg, 2011; Raffaele, 2021), capable of complementing classroom environments and supporting more flexible, meaningful and participatory forms of teaching and learning. Rather than functioning solely as repositories of books, libraries can operate as educational infrastructures where reading promotion, autonomous exploration, collaborative learning and information literacy intersect. In this perspective, the school library may contribute to the development of reading literacy, information and media literacy, critical thinking, and social and civic competences, while fostering active and responsible citizenship and participation in democratic life (IFLA/UNESCO, 2025). As a more open and participatory educational environment, it may also support school well-being (Merga, 2022) and create pedagogical conditions for more active forms of student participation and agency (Williams, 2017). In this way, the school library can enrich learning environments and support forms of educational innovation that extend beyond traditional classroom settings. This renewed interest in school libraries emerges in a context marked by two closely related trends. On the one hand, research highlights a decline in reading for pleasure among children and young people (Bone et al., 2025; Clark et al., 2024; OECD, 2021). On the other hand, recent international and national large-scale assessments reveal a broader decrease in reading literacy and performance (INVALSI, 2025; Mullis et al., 2023; NCES, 2023; OECD, 2023). Within this scenario, school libraries are increasingly considered strategic environments for sustaining reading practices, fostering engagement with texts and strengthening students' literacy development. Studies conducted both in Italy and internationally have highlighted the positive educational impact of school libraries. A growing body of research shows that well-developed school libraries are associated with higher academic achievement and improved reading outcomes (Lance & Kachel, 2018; Marzoli & Papa, 2019). At the same time, the literature suggests that the mere presence of a library is not sufficient: its educational potential depends largely on how it is integrated into teaching practices and into the broader organisational life of the school (IFLA/UNESCO, 2025). This paper presents the results of a national survey conducted within the research project Avanguardie Biblioeducative, promoted by INDIRE in collaboration with the Italian network of innovative school libraries "Biblòh". The survey involved more than 6,800 respondents, including school leaders and teachers from schools across the Italian education system, and aimed to explore how school libraries are currently organised, perceived and used within everyday school practices. The findings indicate a generally positive perception of the school library as a learning environment capable of supporting teaching and learning. However, the data also reveal that its integration into everyday teaching practices remains uneven and often dependent on organisational conditions, institutional support and teacher engagement. By providing empirical evidence on the current condition of school libraries in Italy, the study contributes to the discussion on how schools can renew their learning environments and strengthen reading practices. Supporting school libraries as structured learning spaces may represent an important step towards richer educational environments and greater student engagement with reading.

EMPOWERING YOUNG PATIENTS: CO-DESIGNING A CHARTER FOR THE RIGHT TO PARTICIPATION OF HOSPITALISED CHILDREN

Federico Neri (ActionAid International italia E.T.S., Italy) · **Maria Sole Piccioli** (ActionAid International italia E.T.S., Italy)

participation | hospitalised children | co-design

The right of children and adolescents to actively participate in processes that concern them is enshrined in the UN Convention on the Rights of the Child, yet in hospital settings it remains among the least practised. Research conducted in Italy shows that the right of minors to express opinions and preferences regarding clinical decisions that affect them still represents one of the least developed areas in hospital practice, compared to rights related to protection and family presence, which record significantly higher levels of implementation (Bisogni et al., 2015). At the international level, the literature highlights how the involvement of minors tends to remain symbolic: children are consulted but rarely manage to meaningfully influence decision-making processes, partly due to the tendency of adults to protect them from difficult choices (Teela et al., 2023). At the same time, meaningful participation of children in decisions that concern them produces concrete and documented benefits: it reduces anxiety, increases cooperation with clinical procedures and improves treatment adherence (Council of Europe, 2024). To address this gap, ActionAid Italia — within the European project Empowering Young Patients (EYP, CERV programme, 2025–2026) — is coordinating the co-design of a Charter for the Right to Participation of Hospitalised Children. The tool aims to translate principles and operational recommendations into a shared document, built through a multi-level participatory process: Communities of Practice with interprofessional practitioners, a validation questionnaire on the draft submitted to 150 professionals and stakeholders, and a final laboratory that will involve the direct participation of hospitalised children and peers with previous experience of hospitalisation or involved in the project's educational activities. The Charter will then be presented to Italian and European institutional decision-makers. The analytical framework adopted is Laura Lundy's model (2007), which articulates participation through four interdependent dimensions: Space (safe places and times for expression), Voice (the effective possibility of expressing opinions and needs), Audience (adults willing and able to listen) and Influence (the possibility that listening produces real effects on decisions). This model guided the analysis of the three main phases of the care pathway — diagnosis, hospitalisation and off-therapy — across different developmental age groups. The empirical work was developed in dialogue with practitioners from the Paediatric Oncology ward of the Policlinico Gemelli in Rome, whose contribution has informed both the analytical phase and the definition of the Charter's priorities. The results show that participatory practices exist and produce positive effects, but remain tied to individual sensitivity rather than a systemic approach. The setting — language, spatial arrangements, coherence among professionals — emerges as an active variable in care, capable of supporting or hindering listening. Participation is recognised as an ethical value, but not yet as a structured organisational competence. These are the knots that the Charter aims to untangle, offering a shared language and common tools to all actors within the hospital system.

BEYOND REPRESENTATIVE PARTICIPATION: ORGANISATIONAL AND PEDAGOGICAL CONFIGURATIONS OF SCHOOL DEMOCRACY

Chiara Dina Paganuzzi (University of Milano-Bicocca, Italy)

democratic schooling | participatory governance | children rights

In many contemporary school systems, student participation is formally recognised yet often confined to representative bodies with limited influence on decision-making. Student councils frequently operate within adult-dominated decision-making structures, limiting students' real influence on school governance and learning processes (Sousa & Ferreira, 2024; Fielding, 2013; Hope 2012a; Lundy & Cook-Sather, 2016). Many school-based participation mechanisms remain anchored in representative models that grant students marginal decision-making authority. This paper examines how some democratic schools experiment with organisational and pedagogical arrangements that challenge these limits. It draws on preliminary findings from an ongoing comparative doctoral research project "RE-DE-PART - Reimagining Democratic Participation", which investigates the organisational, pedagogical and relational configurations under which students' participation can move beyond symbolic representation and become a meaningful component of school governance. Drawing on three school cases, the study explores the conditions that enable student influence and the transferability of high-intensity democratic practices to Italian public schooling. Methodologically, the study adopts a qualitative, comparative and participatory design (Yin, 2018; Pastori, 2017; Mantovani, 2007), combining multi-site case studies in three upper-secondary schools (France, Italy, the Netherlands). The selected cases represent distinct configurations of democratic schooling: deliberative co-management within a public experimental lycée; a sociocratic, self-directed democratic school; and a public school engaged in structural innovation (DADA model) but characterised by predominantly representative participation. Reflexive research tools, such as participatory video (Colucci, 2016; Lunch et al., 2006), are employed to position students as epistemic agents documenting and critically rethinking participation. Within this design, the Italian case study includes an intergenerational co-design component aimed at reinterpreting insights from the two highly participatory schools to inform guidelines for democratic school governance. The literature review on highly participatory schools identifies three interconnected organisational and pedagogical configurations: Governance infrastructures and devices: weekly assemblies, school councils, justice committees, sociocratic circles, and shared decision-making bodies that redistribute deliberative authority and formalise students' equal status in decision processes (Aquarone, 2021; Hecht, 2012; Hope, 2012b; Gray & Chanoff, 1986; Morrison, 2024; Gawlicz & Millei, 2022), thus embedding democracy across school life. Curricular pathways: negotiated curricula, flexible timetables, and self-directed learning environments that align decision-making power with epistemic agency in learning (De Cesare, 2024; Grey, 1986; Korkmaz and Erden, 2014). Values and pedagogical foundations: pedagogical and governance devices grounded in the principles affirmed within the United Nations Convention on the Rights of the Child (UNCRC, 1989), particularly participation and equality as fundamental rights. This findings suggest that democratic governance is not merely a participatory decision-making structure but a core pedagogical architecture through which democracy is learned through practice, echoing Dewey's conception of democracy as a form of life (Dewey, 1916). However, even in highly participatory settings, power asymmetries persist. Although often criticized for not maximizing traditional academic outcomes, democratic education instead redefines success in terms of justice, well-being, and meaningful participation. When critically and contextually reinterpreted, these practices may inform hybrid configurations of school democracy that combine representation with more direct forms of participation, helping reimagine Italian schooling as a more democratic space.

SCHOOL PARTICIPATORY BUDGETING: RETHINKING DEMOCRATIC GOVERNANCE

Stefano Stortone (BiPart Impresa sociale srl, Italy)

participatory democracy | participatory budgeting | governance

School Participatory Budgeting (SPB) has recently emerged as an innovative practice aimed at fostering democratic participation within educational institutions. Inspired by the broader experience of participatory budgeting (PB), first developed in the late 1980s in Porto Alegre, SPB adapts the idea of involving citizens in budgeting decisions to the school environment by enabling students to deliberate on and decide the allocation of a portion of school resources. In recent years, several Italian schools have experimented with SPB processes in which students propose, develop and vote on projects financed through a share of the school budget. While SPB is often framed primarily as a pedagogical tool for civic education, this paper argues that its relevance lies in its potential to reshape democratic practices within schools. SPB should be understood more fundamentally as a laboratory/experiment for rethinking democratic governance in educational institutions, challenging existing forms of school governance and democratic practice. By combining deliberation in working groups with final universal voting assemblies, SPB creates a structured process through which students can engage directly with collective decision-making and the management of shared resources. However, more than procedural design or structural conditions, the effective implementation of SPB depends on the presence of a participatory mindset within the school community. Schools are typically characterized by hierarchical organizational structures, limited decision-making autonomy and institutional cultures in which participation often remains formal or symbolic. In such contexts, participatory initiatives risk being reduced to episodic exercises that have little impact on actual decision-making processes. Drawing on evidence from the Erasmus+ project School Participatory Budget: A Tool to Foster School Democracy and from more than ten case studies in Italy, this paper explores these tensions and examines the conditions under which SPB can move beyond symbolic participation toward a more stable integration into school governance. The analysis suggests that the success of SPB depends fundamentally on the willingness of school actors—students, teachers and school leaders—to reconsider established roles and to recognize students as legitimate participants in collective decision-making. In this sense, SPB should not be understood simply as a technical tool, but as a catalyst for developing a participatory culture capable of supporting more democratic forms of school governance.

CHANGING SCHOOLS FROM WITHIN: LEVERS FOR TRANSFORMATION BASED ON A CASE STUDY FROM GERMANY

Luisa Girnus (Free University of Berlin, Germany) · **Nina Goretzko** (Free University of Berlin, Germany) · **Anna Schnepper** (Free University of Berlin, Germany)

Civic Citizenship Education | Education for Sustainable Development | Transformative Education

The integration of Education for Sustainable Development (ESD) and Civic Citizenship Education (CCE) is increasingly proposed as a response to the “post-truth” crisis (Farkas & Schou, 2024) and the weakening of democratic resilience (European Council, 2023). Contemporary approaches to CCE (e.g., Biesta, 2021; Westheimer & Kahne, 2022) and ESD (e.g., UNESCO, 2020; Macintyre et al., 2025) treat democracy not merely as a subject to be taught but as an active learning principle embedded in school practice. This shift moves the focus from “learning about democracy” to “democracy as a learning principle” (Fielding, 2012; Cook-Sather, 2020), positioning schools as spaces for epistemic agency (Nieminen & Ketonen, 2019). Nevertheless, despite the need for these two agendas to work synergistically such integration remains insufficiently realized in everyday school practice (Macintyre et al., 2025). In the German context in particular, it can be observed that schools are difficult to change (Buchna, 2019). Efforts to substantially embed CCE and ESD in the curriculum often remain at the project level, running alongside regular lessons rather than being fully integrated. One way to overcome this issue is to develop the profile of entire year groups in which a transformative approach is consistently implemented. This contribution presents research in which we examine this approach in more detail through a case study. The Futur-3 profile of a Berlin grammar school systematically embeds elements of transformative education, such as self-directed learning, extracurricular cooperation and a focus on sustainability issues, throughout the entire secondary school period. Our research explores how this profiling helps to prevent 'hollow participation' and establish democratic as well as sustainable practices. Thus, our research contributes to addressing the question of which specific school conditions must be met to enable democratic renewal (European Council, 2023). We examined which levers are pushing transformative learning by combining CCE and ESD using a triangulated approach involving: a quantitative baseline study of the entire Year 10 cohort (n = 120), qualitative interviews with pupils in the Futur-3 profile (n = 32), and narrative interviews with the teachers who developed the Futur-3 profile. Our data allowed us to identify three levers: pedagogical, organisational and relational conditions. Project-based learning and interdisciplinary problem solving (e.g. climate justice) are particularly effective in strengthening political self-efficacy and resistance to populism when designed to be deliberative (cf. Ahmed, 2004). This fosters learners' ability to analyse complex problems, think critically and develop collective solutions — key competencies for democratic participation and sustainable development. The second lever is organisational in nature. Structurally embedded co-determination can foster democratic attitudes and transformative agency (Lund & Vestøl, 2021). This enables pupils to exert influence both formally and practically, thereby enhancing the quality of the democratic experience in everyday school life. The third lever concerns the relational level. A teaching culture that is relationally anchored fosters a sense of belonging and efficacy, ideally strengthening the willingness to engage in democratic participation and sustainable action (Biesta, 2021).

Schools as Community Hubs. Learning Ecosystems for Democracy across Pedagogy, Health, Architecture, and Urban Planning

PANEL CONVENORS: Giuseppina Rita Jose Mangione (Indire, Italy); Raffaella Carro (Indire, Italy)

PANEL KEYWORDS: Community Hubs, Educational Futures, Intersectoral Innovation

The panel explores the community hub as an outcome of evolutionary models of future schooling (Poli, 2024) towards ecological, networked, and democratic configurations. The hub is discussed as a innovative scenario (OECD, 2020) that integrates the 0–6 system within an architecture of lifelong educational opportunities (OECD, 2017) and as a lever for equity. Schools, in this view, cultivate coexistence and collective agency through cooperation and participation (Dewey, 1916; Biesta, 2011), foregrounding the conditions that make democracy a lived practice and responding to the call for a new social contract for education that positions school as a common good sustaining wellbeing, inclusion, conflict mediation, and care for the educational community (UNESCO, 2021). Contributions from pedagogical, socio-health, architectural, and urban-planning perspectives are welcomed. Pedagogical papers may address school–community alliances, curricula extended across physical and digital spaces, distributed leadership, interprofessional collaboration, settings and furniture for innovative learning environments (Fullan, 2007; Mangione Cannella, Chipa 2025). Health perspectives may mobilize Whole School and Health Promoting Schools frameworks (EC, 2023). Architectural contributions may examine thresholds, porosity, and spatial flexibility as conditions for participation, universal accessibility, and codesign practices that bring together pedagogical and technical–design needs (Gehl, 2010). Urban-planning contributions may consider hubs as nodes of social innovation and spatial justice through welfare networks, proximity mobility, adaptive reuse, deliberative processes, and collaborative design (AUE, 2016; Pileri et al., 2022). Drawing on the Enterprising Communities (Manfredi, Costi 2023), the panel examines hubs as devices of integrated transformation and identifies criteria, cases, and research directions for the school-as-civic centre.

OPENING, WELCOMING, TRANSFORMING. SMALL SCHOOLS AS COMMUNITY ARCHITECTURE LABS

Flavia Vaccher (Università Iuav di Venezia, Italy)

Small schools | Existing building redevelopment | Architectural innovation

Shrinking, ageing and with fewer and fewer young people: this is how Italy looks today. The decline in the student population and the downsizing of the school network raise questions about the future of school buildings, especially in small municipalities and fragile areas. The redevelopment of existing schools is becoming strategic: not only as a functional, energy and regulatory upgrade, but also as an opportunity to rethink schools as civic infrastructure and public spaces. Innovative and inclusive teaching practices require a rethinking of learning spaces, while the building, accommodating functions other than school ones, is transformed into a place for the community, ensuring its survival, especially in peripheral contexts. The contribution – the result of the 2017 PRIN PRO.S.A. Schools to live in. New architectural models for the construction, renovation and resilient restoration of school buildings and for building the future in Italy research project – focuses on small schools in peripheral areas. Although at risk of closure, they continue to play an active role, becoming privileged laboratories for new models of educational space and integration between architecture, pedagogy and the community. Through spatial analysis, the research reveals the architectural potential of schools as authentic “community architectures”, open to new educational and civic uses, and investigates their role as territorial hubs capable of activating participation, inclusion and social innovation. The focus is on both internal and external spaces: entrance halls serving as welcoming spaces, corridors that can be transformed into informal learning areas, classrooms that open out onto the outdoors, and open spaces – courtyards, gardens and surrounding areas – as key elements in ensuring the school’s flexibility and openness to the local community. Their configuration, permeability and relationship with public space become design levers for accommodating new civic, cultural and educational functions – laboratories, fab labs, environmental centres, health centres – promoting interaction between schools and communities and strengthening the role of schools as multifunctional hubs for the local area. By collecting and organising a substantial number of case studies in a thematic atlas, the research, using observation points at different scales and starting from the assumption that the existing situation is a possible terrain for even unexpected projects, shows how the typological variety of small

schools offers real opportunities to experiment with new pedagogical and architectural approaches. Permeability, flexibility and territorial integration become fundamental tools. Opening, welcoming, transforming: the school becomes an educational and civic hub, where learning is community and the community itself becomes school.

EXPLORING FUTURES THROUGH TERRITORY: EDUCATION OUTSIDE THE CLASSROOM AS PEDAGOGICAL LEVERAGE FOR LIFELONG ORIENTATION

Erica Biagini (University of Modena and Reggio Emilia, Italy)

Education Outside the Classroom | Lifelong Orientation | Rural Schools

International and national frameworks increasingly conceptualize schools as democratic learning ecosystems capable of integrating educational, social, and territorial resources (OECD, 2020; UNESCO, 2021). Within this vision, schools are called to act as community-embedded learning environments that support students' development throughout their educational pathway. In Italy, the Linee guida per l'orientamento (MIM, 2022) recognise orientation as a continuous educational process of self-construction, beginning in early childhood, aimed at fostering self-awareness, confidence, and recognition of individual interests and potential across all levels of education. This paper explores how Education Outside the Classroom (EOtC) (Lauterbach, Bølling & Dettweiler, 2023), informed by Early Career Education perspectives (Del Gobbo, Frison & Galeotti, 2021) can function as a pedagogical leverage for lifelong orientation, enabling exploratory encounters with the world of work and supporting students' reflection on possible futures. In this framework, early career education is viewed as a series of educational activities that, while connected to the school curriculum, extend beyond the classroom through territory-based exploration. This broadens students' understanding of opportunities, interests, and personal aspirations, supporting self-exploration and identity development rather than prescribing vocational choices. The study was conducted in a rural comprehensive institute located in a mountain area of Northern Italy, involving selected classes from kindergarten, primary, and lower secondary school (N = 87 students). The research adopted a participatory action-research design and all classes participated in a locally-rooted orientation project, combining community exploration with classroom-based reflective activities. This was designed to foster a vertically coherent approach across educational levels. The local territory — civic institutions, local enterprises, and cultural heritage sites — functioned as an extended classroom (Frabboni, 1980), offering students authentic encounters with work-related practices and local professions. Within this broader framework, a ricerca-formazione pathway (Asquini, 2018) was carried out with primary school teachers, resulting in the co-design and implementation of a four-day immersive EOtC experience involving two primary school classes, During this process, research questions and educational objectives were collaboratively defined with the teaching team. Data collection combined qualitative and quantitative tools including teachers' and students' logbooks, field notes, interviews and pre- and post-experience questionnaires with both participating and control classes (Trinchero, 2002). Logbooks supported the iterative redesign of activities and formative evaluation. Reflective sessions facilitated by the researcher explicitly linked EOtC experiences to themes of self-awareness, interest exploration, and future orientation in a lifelong perspective. Preliminary findings suggest that structured EOtC experiences foster meaningful contact with professional practices and stimulate students' reflection on their personal interests, competencies and aspirations. At the institutional level, the ricerca-formazione process enhanced teachers' professional reflexivity regarding their orienting role and contributed to envisioning a shared vertical orientation curriculum. This paper argues that territory-based educational experiences can function as a pedagogical infrastructure for lifelong orientation in rural contexts in particular, positioning schools as relational hubs that connect learning, community resources, and students' exploration of possible futures.

ROOTS AND PERMEABLE BOUNDARIES: THE 0–6 INTEGRATED SYSTEM BETWEEN COMMUNITY, SPACE, AND EDUCATIONAL CONTINUITY

Alessia Rosa (INDIRE, Italy) · **Michela Bongiorno** (INDIRE, Italy)

ECEC | Community Hub | Whole School Approach

The educational provision of early childhood services (0–3) and preschools has long drawn on the spaces immediately surrounding educational settings as fundamental mediators of children's experience. Through the exploration of the local environment, educators and teachers support the acquisition of everyday competencies and knowledge, reconfiguring children's experiences within a structured horizon of meaning. Every space — corridors, threshold environments, shared areas, classrooms, courtyards and gardens within the service; streets, squares, shops and public parks beyond its walls — becomes an educational imprint within diversified, complex, and interrelated experiences (Bertolino & Guerra, 2021). The establishment of the integrated system of education and care, designed to guarantee "all children, from birth to six years of age, equal opportunities to develop their potential for relationships, autonomy, creativity, and learning, in order to overcome inequalities and territorial, economic, ethnic, and cultural barriers" (Legislative Decree 65/2017), both affirms and radicalises this vision. The 0–6 Integrated System constitutes an educational continuum accompanying the child from birth to six years through an articulated network of services — from nurseries and micro-nurseries to spring sections, from supplementary services to state and accredited preschools — conceived in close interconnection with one another and with the wider community context. The system's core innovation lies in the Childhood Hubs (Poli per l'infanzia): shared spaces in which the 0–3 and 3–6 segments coexist, fostering educational continuity and the construction of a community of care and learning that brings together children, families, and educators within a shared project (Rosa, 2025). The theoretical framework of this contribution integrates three complementary perspectives. The first is that of the Extended School (Scuola Estesa), which interprets educational continuity both vertically — between nursery and preschool — and horizontally (Mangione et al., 2025), between institution and territory, maximising local pedagogical traditions and transforming the integrated system into a permanent cultural resource for the entire community. The second is that of the Community Hub, which reframes 0–6 services as vital centres capable of generating social cohesion and connecting families, services, and local resources. The third is that of the Whole School Approach, a holistic strategy that engages all members of the educational community — staff, children, families, and the wider territory — in the shared construction of genuinely collaborative, supportive, and inclusive environments (Rosa, 2024). The forms through which the integrated 0–6 system may be concretely configured are multiple, offering responses calibrated to the traditions, specificities, and needs of individual territories. The Puglia Region has in this respect developed a range of strategies that have been the subject of INDIRE research through case study methodology. The findings make it possible to identify models in which preschool educational provision takes shape as centres of social aggregation and learning ecosystems situated at the intersection of architecture, urban planning, and pedagogy, offering transferable insights for the development of territorial educational policy.

YOUTH HUBS AS COMMUNITY LEARNING ECOSYSTEMS: STUDENT VOICE, COMMUNITY SPACES AND DEMOCRATIC PARTICIPATION

Maria Sole Piccioli (ActionAid Italia, Italy) · **Federico Neri** (Scaro Community)

Youth participation | Student voice | Youth hubs

In recent years, international debates on education have increasingly framed schools as community hubs capable of connecting learning, civic participation and local development. Within this perspective, youth participation and the recognition of student voice have emerged as key dimensions for fostering democratic and inclusive educational environments. As Cook-Sather (2006) argues, educational systems cannot be effectively redesigned without listening to the perspectives of the students they are meant to serve. Recent research in Italy highlights persistent gaps between formal participation structures and students' perceived agency. A national multi-actor survey conducted by the University of Milano-Bicocca in collaboration with ActionAid, involving over 2,000 upper-secondary students, shows that while formal mechanisms of participation exist, more than one third of students perceive their role in school governance as largely symbolic, and only a minority believe that students' opinions significantly influence school decisions. This contribution explores the role of Youth Hubs as community learning ecosystems that expand the educational function of schools by connecting formal education, civic engagement and local spaces. Youth hubs are hybrid environments where formal and informal learning intersect, enabling students, educators, civil society organizations and local communities to collaborate in the co-production of knowledge and social innovation. The analysis draws on ActionAid Italy's experience in promoting youth participation and community-based educational initiatives, aimed at strengthening the role of schools and local educational communities in addressing educational inequalities and school disengagement. Through capacity-building activities for young people and educators and the activation of community spaces, these initiatives promote civic competences and youth agency beyond the boundaries of formal schooling. The paper adopts a practice-based case study approach focusing on the experience of Scaro Community, a social café and cultural hub located in a multicultural neighborhood of Agrigento. The initiative was created by a group of young people who decided to return to their hometown to contribute to its social and cultural development. In a territorial context characterized by limited opportunities for youth participation, fragile civic infrastructures and significant youth out-migration, Scaro functions as a community space that promotes education initiatives in collaboration with schools, social innovation and youth-led projects aimed at strengthening local opportunities and civic engagement. Within this context, youth hub practices connect schools with the broader community through participatory tools such as community laboratories, participatory needs analysis and educational pacts, allowing students to reflect on their local context, articulate collective needs and interact with local institutions. These processes strengthen young people's sense of belonging and support confidence in the possibility of collective change. The contribution situates this experience within broader theoretical frameworks on youth participation and democratic education, including models of participation (Hart, 1992; Lundy, 2007), the concept of the school as a learning organisation (Kools & Stoll, 2016), and research on student voice. Findings suggest that youth hubs can function as local democratic infrastructures, enabling young people to become active agents shaping their communities, promoting community regeneration.

THE "RINNOVATA": THE SHARED CONSTRUCTION OF A SCHOOL AS A DRIVER OF SOCIAL TRANSFORMATION

Franca Zuccoli (Università degli Studi di Milano-Bicocca, Italy) · **Anna Teresa Ferri** (Istituto Comprensivo Rinnovata Pizzigoni) · **Gabriele Locatelli** (Cooperativa CAeB)

Pizzigoni Rinnovata School

This paper aims to reflect, primarily from a historical perspective, on the path that led to the creation of the Rinnovata school by its founder, Giuseppina Pizzigoni (1870-1947). In this regard, analyzing the process that led to the creation of a method and the construction of a new school building—a space for the concrete implementation of Pizzigoni's pedagogical thinking—we intend to focus on two key aspects (Rossi Cassottana, 1988, 2004).. The first is the establishment of a scientific committee to support the project, composed of key figures in Milanese society at the time. Until now, little has been explored regarding the scientific committee that Giuseppina Pizzigoni established and that supported her in her project to create and experiment with a different teaching approach. The group that supported her included scientists, engineers, writers, and entrepreneurs. Among these, we can at least mention: astronomer Giovanni Celoria, Professor Eugenio Medea, psychologist Zaccaria Treves, poet Giovanni Bertacchi, and industrialists Paravia, Marelli, and Bisleri (Pizzigoni, 2022). This group can be seen as a project team from which a new educational model emerged, embracing its potential for social transformation. Therefore, this group can also be considered, in a certain sense, a social hub that has focused on the importance of school as a place for building knowledge, a driving force for social cohesion, and for developing the abilities of each individual and the community. The second fundamental aspect is the attention paid to the design of the school building. This project embodies Giuseppina Pizzigoni's pedagogical philosophy, with many of the essential recommendations communicated to Amerigo Belloni, the engineer who built the school following her suggestions (Pizzigoni, 1914). Here too, the school is conceived as a center of great social value, a space in constant communication with the outside world, a permeable place that works to enhance even that which lies outside the school. Inside and outside continually collaborate, thus embodying one of Pizzigoni's fundamental ideas, which in her writings led her to state that "School is the world." Even today, nearly a century after the construction of the Rinnovata, the idea of a continuous exchange between inside and outside, the vision of a school as a driving force within the neighborhood, a point of reference for the creation of an energetic community, or a place for social exchange, remains a defining characteristic of this school. This paper will offer some concrete examples of contemporary trends (Zuccoli, 2017).

EDUCATIONAL LIVING

Micaela Donatella Castiglioni (Università Studi di Milano-Bicocca, Italy)

Keywords: Educational Places Pedagogy Architecture

What does it mean to build an educational environment (Iori, 1996) that recognizes and addresses realistically and attentively the people who learn and develop within it? Is there room in educational spaces (schools, universities, community services, etc.) for the experiences of those (Iori, 1996), particularly children, young adults, and adults, who spend a significant part of their daily lives there? While there is undoubtedly a close and important correlation between quality, democracy, inclusiveness, etc. of educational spaces and the architectural forms that characterize them, we ask ourselves why pedagogical knowledge does not pay greater attention to the connection between the physical and material dimensions of places designed for education and their symbolic dimensions (Iori, 1996; Manzini, 2021; Vanolo, 2024). Starting from these premises, we will seek to question the need for close collaboration between those involved in education—pedagogists, educators, teachers, and architects/designers—in the increasingly pressing direction of a possible

interpretation and design of educational spaces as spaces in which everyone can learn, grow, and live well, in the spirit of objective, physical, and relational proximity (Manzini, 2021). We therefore believe it desirable to develop what we might call a Manifesto for Educational Living. Since educational living is a complex experience in the contemporary world, it inevitably draws on multiple disciplinary perspectives, ranging from pedagogy, psychology, anthropology, the sociology of cultural processes, architecture, and design, to name just a few of the most significant within the proposed reflection.

FROM CLASSROOM TO CITY: CO-DESIGNING EDUCATIONAL AND URBAN SPACES AS DEMOCRATIC PRACTICE

Gina Chianese (Università di Trieste, Italy) · **Barbara Bocchi** (Università di Trieste, Italy)

Co-design democracy | Learning Spaces | Learning Ecosystems

TThe bidirectional relationship between “Learning for Democracy” and “Democracy for Learning” highlights a virtuous circle in which democracy emerges not only as an object of learning, but also as a structural and cultural condition enabling meaningful learning. From this perspective, the design of educational environments acquires both political and pedagogical value: spaces, temporalities, mediating devices, and social relations actively support participation, dialogue, and shared responsibility. Conceiving the learning environment as a democratic act means acknowledging it as a site of deliberation, where heterogeneous subjectivities can speak, negotiate interests, and construct collective meaning, thus positioning the school as a deliberative ecosystem in which democracy is simultaneously an educational aim, a material condition, and a daily practice of learning (Biesta & Lawy, 2006; Fielding, 2011). Within this framework, the co-design of school spaces by the school community plays a strategic role, as it rethinks the material, spatial, and organizational conditions of schooling while redistributing decision-making power among students, teachers, families, designers, and territorial actors (Chianese & Bocchi, 2023; Castoldi, 2020). Democracy, in this sense, is not merely a curricular content or institutional framing, but an everyday practice embedded in didactic and design choices: from spatial configurations to the use of educational technologies, from organizational flexibility to teaching practices. Engaging learners from early ages in the co-design of school and urban environments as distributed and decentered learning spaces fosters sustainable, inclusive, and intergenerational practices that interconnect formal education with the urban milieu, enabling educational uses of public space and meaningful links between learning, citizenship, and lived environments (OECD, 2021; Chipa, Cannella & Mangione, 2023). Spatial co-design thus becomes a democratic act in which values, needs, and priorities are collectively negotiated, transforming space into a device for agency, participation, and belonging (Gehl, 2010). The contribution illustrates how collaborative design practices - from educational placemaking to integrated school-neighbourhood and school-city planning - can strengthen inclusion, wellbeing, community resilience, and active citizenship (Latham & Layton, 2019). In this perspective, the school becomes a civic and democratic laboratory capable of intertwining education, territorial welfare, and urbanity, making visible the circular relationship between democracy and learning (UNESCO, 2015)

FROM 'ATELIER CREATIVI' TO COMMUNITY HUBS: A 10-YEAR RETROSPECTIVE ON SCHOOL MAKERSPACES IN ITALY

Lorenzo Guasti (INDIRE, Italy)

school makerspaces | community hub | sustainability

Between 2016 and 2026, school makerspaces in Italy shifted from policy-driven equipment rollouts to contested, pedagogically uneven learning environments. Their institutional entry point is traceable to the National Digital School Plan (PNSD) and INDIRE's Maker@Scuola research, active since 2014, which translated international maker discourses into school-relevant questions of architecture, curriculum integration, and teacher professional learning (Guasti & Nulli, 2021; INDIRE–EUN, 2020; Martinez & Stager, 2021). The decade's most enduring lesson is civic as much as pedagogical: the makerspace, when it works, is not a room full of machines but a threshold space between school and community. The INDIRE Makerspace Manifesto (2019) made this explicit: the school makerspace is a place where the institution "opens towards the outside, connects with an extra-scholastic reality, and renews its structures" — with separate external access and deliberate involvement of local institutions, civic associations, and economic actors. This directly anticipates the school-as-community-hub paradigm. As INDIRE's research on learning environments argues, schools have become "spaces for dialogue between public administration and citizens, service centres for the territory, and reference points for the archipelago of associations operating in urban settings" (Tosi, 2019). The makerspace is the most concrete operational expression of this vision. Yet this openness also creates fragility. Sustainability remains the field's central unsolved problem. Equipment — laser cutters, 3D printers, robotics kits — is typically funded through short-term ministerial calls (PON/FESR) or European structural funds, with no provision for lifecycle costs: consumables, repairs, and the technical expertise required to keep shared tools operational. The Manifesto itself foregrounds this, identifying maintenance and technical development as one of the four core contributions a maker-partner must provide. When partnerships dissolve and funding cycles end, spaces fall into disuse. Equally critical is teacher professional development. Research documents that teachers lack training not in machine operation, but in maker pedagogy: facilitating open-ended inquiry, assessing process over product, and positioning making as connective tissue between disciplines and community problems (Walan & Gericke, 2023; Quintana-Ordorika et al., 2024). The Manifesto draws a sharp distinction: technical formation can be outsourced to machine vendors, but pedagogical design competence must remain with teachers. Schools that conflate the two produce spaces that are neither effective nor genuinely community-facing. The 2026 context adds urgency. Generative AI has intensified debate about hands-on learning, but this paper argues the opposite of obsolescence: physical making — rooted in Papert's constructionism (Harel & Papert, 1991; Levin, Semenov & Gorsky, 2025) — becomes more valuable precisely because AI cannot replicate material agency, spatial reasoning, or collaborative production rooted in local context. A community-open makerspace is a site where students build with neighbours, and where AI augments ideation without displacing the cognitive work of making. Three priorities emerge: funding models covering full lifecycle costs; teacher learning focused on facilitation and community co-production; and making-with-AI curricula positioning fabrication and generative tools as complementary practices. The Italian school makerspace, where it has thrived, demonstrates that schools can be genuine community hubs — places where making together is a democratic act.

PATRIMONI IN VALIGIA: SCHOOLS AS COMMUNITY HUBS FOR DEMOCRATIC AND INCLUSIVE LEARNING ECOSYSTEMS

Pamela Giorgi (Indire (Istituto nazionale di documentazione innovazione e ricerca educativa)) · **Irene Zoppi** (Indire (Istituto nazionale di documentazione innovazione e ricerca educativa)) · **Valentina Pedani** (Indire (Istituto nazionale di documentazione innovazione e ricerca educativa)) · **Rubina Bazzani** (Indire (Istituto nazionale di documentazione innovazione e ricerca educativa))

Cultural heritage education | Learning ecosystems | Civic competence

Patrimoni in valigia is a project co-designed by INDIRE and the Regional School Office of Tuscany that positions schools as active nodes within territorial learning ecosystems, capable of fostering democratization, equity, and well-being through the educational use of cultural heritage understood as a shared public good. The project originates from more than fifteen years of research conducted by INDIRE on the pedagogical potential of cultural heritage in its broadest sense. This long-term reflection has emphasized the value of heritage as a tool for interdisciplinary learning, civic education, and community engagement. Within this perspective, Patrimoni in valigia focuses particularly on the INDIRE Antiquarian Collection of Youth Literature, a corpus of nineteenth- and early twentieth-century materials that offers a unique lens for examining how childhood narratives have historically contributed to the construction of stereotypes related to diversity and alterity. By engaging with these sources, students are encouraged to develop critical awareness of the cultural narratives that have shaped collective imagination and social perceptions over time. The project involves teachers and students from both primary and secondary education, including adult learners in correctional settings, thus embracing a vertical and inclusive approach. It unfolds across four interconnected phases. The first phase includes the presentation of the project to schools and initial teacher training, accompanied by the delivery of a "suitcase" containing original heritage materials and reproductions selected by INDIRE on the theme of the foreigner and the "other." The second phase consists of classroom-based action-research laboratories, designed and implemented by teachers with the support of INDIRE researchers and guided by a dedicated toolkit. During this stage, students explore the materials, reinterpret them, and produce new cultural artefacts. The third phase focuses on public dissemination. Each participating school organizes a small museum-like exhibition open to the wider community, where students present the outcomes of their research and creative work—such as podcasts, videos, interactive pathways, written reflections, or artistic productions. This moment of restitution reinforces the role of the school as a civic center and a cultural hub capable of generating shared knowledge and fostering community participation. The fourth and final phase involves the digital publication of the materials produced, ensuring long-term accessibility and contributing to the creation of a distributed, open educational archive. Within this framework, the school emerges as a community hub that connects heritage, territory, and the educational community, promoting collective agency, interprofessional collaboration, and democratic participation. The project also supports the development of the European Key Competences for Lifelong Learning (2018), particularly multilingual, intercultural, civic, entrepreneurial, and learning-to-learn competences. By combining heritage education, active methodologies, and community engagement, Patrimoni in valigia demonstrates how cultural heritage can become a driver of equity and everyday democracy. The contribution discusses preliminary results, the potential of the model, and future directions for strengthening territorial learning ecosystems.

RES SCHOOL CENTERS IN GENOA: A PROGRAM OF SCHOOLS THAT LEARN WITH THE LOCAL COMMUNITY

Graziella Arazzi (Ufficio Scolastico Regionale per la Liguria, Italy)

responsibility subsidiarity reciprocity

How can we define the geometry of the "Not One Less" (2024) Purpose-built Network, which unites, through innovative forms of co-design, the eight Special Educational Resources (RES) Hubs for students with severe disabilities, located in eight comprehensive schools in Genoa (San Francesco da Paola, Voltri 1, Quezzi, Quarto, Pegli, Montaldo, Molassana-Prato, Teglia)? Only non-Euclidean morphologies can represent complex structures (micronetworks that simultaneously operate within a macro-educational constellation) that are nourished by constant relationships with places and contexts, highlighting the importance of institutional reciprocity (Mangione et al., 2025). Each Hub is a node in a fluid and flexible architecture, hosting forms of material life, legacies of the past, and scripts of possible futures. Central to this is the function of stroboscopic dynamics, in which changes and actions by the school allow for the interception and monitoring of territorial transformations and development axes. From the West (de-industrialized peripheral areas) to the East (lack of services), school communities and social organizations, in a symmetrical perspective, assume the role of multidimensional entities that teach and learn from each other within different problematic horizons (student vulnerability, high migration flows, family isolation, dilapidated school buildings). The "Self-evaluation reports of the eight schools (RAV 2025-2028)" show how each hub represents a strategic resource for strengthening shared administration and forms of subsidiarity (Bonasora, 2023), promoting a new educational and social contract that leads the educational institution to: • address risks and emergencies with other public and private structures (healthcare providers, socio-cultural associations, public administrations); • create interesting interprofessional groups (school staff, health and social care workers, and social cohesion workers) that implement unprecedented standards of action; • coordinate with their local community and other hubs a flexible yet specific set of research and intervention spaces and times (school governance structures that are not episodic but rooted and structural) to address common critical issues—real or foreseeable—and ensure fair management and organizational outcomes; • exchange professional resources (teachers, educators, healthcare workers) within co-planning and evaluation contexts, characterized by deep co-learning with families; • become agency factors for associations, citizen groups, and sports facilities, highlighting avenues for urban and social regeneration and carefully managing the development of intergenerational cultures and relationships in the community; • ensure caring and supportive school leadership, capable of fostering a cohesive mind-body relationship through the flexible use of digital tools (Gomez Paloma, Di Tore, Mangione, 2025). In view of a renewed agreement for education, envisioned as a common good, the actions of each school principal have a networked and multi-faceted impact, ensuring inclusive and participatory resilience. Being resilient calls for "bouncing back and regaining ground," or new capacities for recontextualization, starting from mistakes, failures, and obstacles. The leader of the Genoa RES centers engages teachers, families, and experts; generates forms of symbolic recognition for all social actors; values vertical and horizontal subsidiarity; "puts himself in others' shoes"; anticipates problems and solutions; and creates widespread pedagogical solidarity, encouraging moments of collective accountability as a priority phase of enacted co-responsibility.

UNIVERSAL DESIGN FOR LEARNING AS DEMOCRATIC INFRASTRUCTURE: ECOSYSTEMIC DESIGN IN INITIAL TEACHER EDUCATION

Sabrina Galasso (Link Campus University, Rome, Italy (Tutor Coordinator in Initial Teacher Education Programmes), Italy)

Universal Design for Learning | Democratic Schooling | Initial Teacher Education

The conceptualisation of schools as community hubs calls for a redefinition of schooling as a civic and spatial infrastructure embedded within broader social, cultural, and urban ecologies. In this perspective, democracy is not limited to governance structures but unfolds through the design of learning environments that ensure equitable participation and epistemic justice. This view resonates with Dewey's conception of democracy as a mode of associated living, enacted through educative environments (Dewey, 1916). Issues of spatial justice—understood as the fair distribution of educational opportunities, voice, and symbolic recognition across interconnected learning spaces—become central to rethinking both school organisation and teacher preparation. This contribution interprets Universal Design for Learning (UDL) as a democratic infrastructure capable of supporting such ecosystemic transformation, focusing on initial teacher education as a generative site of change. Drawing on ecological learning theories and Whole School Approaches, UDL is framed not as a compensatory toolkit for inclusion but as a systemic design paradigm that restructures environments, interactions, and assessment practices to enable plural forms of participation. The study presents an empirical case from a 60-CFU initial teacher education programme in Italy, developed within the national inclusive education framework (Legislative Decree 66/2017, amended by 96/2019), which emphasises shared responsibility, accessibility, and co-planning among educational actors. The programme was intentionally designed as a micro-ecosystem connecting university coursework, partner schools, and local professional communities. Teacher candidates engaged in multilayered instructional design tasks, co-design laboratories, and reflective mentorship processes aimed at fostering collaborative agency and ecosystemic thinking. The programme was grounded in principles of pedagogical congruence, ensuring alignment between the methodologies presented and those enacted within the training environment, so that future teachers could experience inclusive and participatory design not only as content but as lived professional practice. Data sources included reflective portfolios, instructional artefacts, peer-feedback exchanges, and structured observation notes collected during laboratory activities. Qualitative analysis focused on three interconnected dimensions: the shift from transmissive lesson planning to ecosystemic design; the emergence of shared professional agency within learning communities; the redefinition of assessment as dialogic feedback supporting collective growth. Findings indicate that when UDL operates at the structural level of teacher education, it functions as a democratic enabler: it redistributes epistemic authority, legitimises diverse modes of engagement, and supports future teachers in conceptualising classrooms as relational hubs embedded within civic territories. In doing so, teacher education becomes a prototype of spatially aware and socially responsive practice, where learning design actively addresses inequalities not only at the individual level but across interconnected educational spaces. Generative AI tools were introduced as background amplifiers of access and differentiation; however, technological mediation remained subordinated to ethical, relational, and spatially conscious design principles. By repositioning initial teacher education as a laboratory of democratic ecosystemic practice, this study foregrounds teacher preparation as a strategic lever for advancing equity, participation, and spatial justice within contemporary learning ecosystems.

"WOOD SNOEZELEN". FROM RESEARCH, TO PROJECT, TO START-UP: A MULTISENSORY ENVIRONMENT WITH UNTREATED WOOD FOR INCLUSIVE SCHOOLS AS COMMUNITY HUB

Massimo Rossetti (Università Iuav di Venezia, Italy) · **Agata Tonetti** (Università Iuav di Venezia, Italy) · **Chiara Carrara** (Università Iuav di Venezia, Italy)

Multisensory environments | untreated wood | Snoezelen therapeutic approach

The paper presents the process that led to the construction in a primary school in Veneto of "Wood Snoezelen" – the first multisensory environment made of untreated wood for pupils with disabilities – and the following establishment of the start-up "SenseAble Wood", aimed at designing and building these environments, that can help schools to become inclusive hubs for communities. The most recent data about the Italian school population confirm a trend: due to the demographic decline, there has been a strong decrease in the number of school-age children (900,000 fewer from 2004 to 2024); in the next 8 years, the number of students will fall below 6 million (Il Sole 24 Ore). Given this scenario, a consequence will be an increase of available spaces in schools, which can be used for functions other than teaching, including therapeutic ones (WHO). At the same time, in recent years, the number of students with disabilities increased significantly, approximately 75,000 from 2018/2019 to 2023/2024, about 26% (ISTAT), a trend due to both the decrease in population and growing awareness of disabilities. This scenario is the "Wood Snoezelen" project framework, which began in October 2021 with the research project 'Wood Snoezelen. Multisensory wooden environments for the care and rehabilitation of people with severe disabilities', co-funded by Università Iuav di Venezia, Consorzio Legno Veneto and Bozza S.r.l., aimed at the detailed design of a multisensory room for people with disabilities, neurodevelopmental disorders, SLDs, intellectual disabilities, rare genetic diseases and ADHD, with interior components – internal partitions, raised floors, false ceilings, furnishings – made entirely from untreated wood. The project aimed to combine, for the first time, the "snoezelen" approach, which uses multisensory instruments for stimulation – bubble tubes, optical fibres, projectors, hammocks, tubs with coloured plastic balls, water beds – with an environment made of untreated wood, which, thanks to the release of substances called terpenes contained in the raw material, has a positive effect on mental and physical well-being and reduces heart rate and anxiety levels (CAI-CNR). The research project led to the construction of the first "Wood Snoezelen" room at the "G. Marconi" primary school of the Istituto Comprensivo of Lozzo Atestino (Padua), inaugurated on Februray, 28th 2025 and currently used, also by the local people, with the target to create a school that is not only more inclusive, but can also be a support for the community. At the same time, the continuous use of the room will make it possible to verify the effects of the combined approach of "snoezelen" equipment with a wooden environment, thanks to the ICF-based monitoring and evaluation forms developed in collaboration with the La Nostra Famiglia Association. Given this scenario, and the interest concerning the "Wood Snoezelen" room, the project continues with the establishment of the start-up "SenseAble Wood", which recently took part in the MIT and Start Hub incubation programmes, ranking first in the latter, with the aim of spreading environments that are high quality from both architectural and therapeutic point of view in schools.

SHOT-REVERSE SHOT: SCHOOLS AS TERRITORIAL HUBS, TERRITORIES AS LEARNING ECOSYSTEMS

Valentina Rossella Zucca (Politecnico di Milano, Italy)

Community hubs | Incidental learning | Scenarios

In contemporary debates, the term transition describes shifts toward new technological, social, economic, and ecological models. In this contribution, however, transition is understood not as a linear trajectory but as a condition of structural indeterminacy in which consolidated territorial systems must redefine their balances. The infrastructures that supported the habitability of the twentieth century, such as public services, no longer coincide with the social geographies for which they were conceived. Transition thus emerges as a crisis of meaning and governance, rather than simply a matter of sectoral adjustment. Within this framework, schools become a privileged field of observation. Widely distributed across settlements and composed of recurring urban elements, schools intercept a network of actors operating at different decision-making scales and therefore offer a sensitive observatory for investigating contemporary conditions of habitability. Therefore, when the relationship between this everyday-life infrastructure and its inhabitants becomes unbalanced, its spaces and imaginaries require reconsideration. In this scenario, the OECD explores four possible evolutions of education systems in response to ongoing socio-educational transition: Schooling Extended, which imagines the expansion of formal education and broader access; Education Outsourced, which foresees fragmented educational provision through digital platforms and homeschooling; Schools as Learning Hubs, which interprets schools as community-based educational centers connected to territorial learning networks; Learn-as-You-Go, which envisions continuous forms of learning supported by digital ,and non, environment. Translating these scenarios into practice requires a process of territorialization, capable of examining how such hypotheses take shape within specific material and relational conditions. The research addresses this process of territorialization through a methodological device inspired by the cinematic technique of shot-reverse shot, used to explore the relationship between school and territory. This approach frames schools both as educational infrastructures and as territorial hubs where spaces, actors, and practices interact. The shot is constructed through the analysis of three action-research processes developed in Sardinia, in which the school acts as a territorial actor. In the first case, the school opens to the territory by welcoming associations and local enterprises and integrating teaching with field-based learning practices. In the second case, it participates in the identification and reactivation of an unused space, experimenting with different degrees of transformation in nearby areas. In the third case, the school extends into the neighborhood and engages with the professional world through mapping activities and dissemination tools, both digital and spatial, through which the knowledge produced is shared. The reverse shot shifts attention from the school to the territorial conditions that enable distributed educational practices. Here, the territory itself can be interpreted as an educational infrastructure within a broader territorial learning ecosystem. Through the interplay between shot and reverse shot, the research constructs a collection of spatial elements, actions, and actors involved in these processes. This perspective highlights schools not only as educational institutions but as civic public hubs within territories in transition where learning practices, spatial transformation, and collective action intersect, enabling communities to experiment with different ways of learning and collectively re-imagining the urban space as a shared lifelong learning ecosystem.

SCHOOL LIBRARIES AS COMMUNITY HUBS: CHALLENGES AND ENABLING CONDITIONS

Andrea Nardi (INDIRE, Italy) · **Francesca Pestellini** (INDIRE, Italy)

School libraries | Community hub | Learning ecosystems

School libraries are increasingly recognised in international research as multifunctional educational spaces capable of supporting literacy development, student wellbeing and civic participation. In line with the IFLA-UNESCO School Library Manifesto (2025), the school library is progressively framed as a learning, cultural and community hub: a flexible environment connecting formal and informal learning, cultural production and relationships with local communities. As a learning hub, the school library can be understood as a "third learning space" in which cognitive, critical and socio-emotional competences are developed through interdisciplinary, inquiry-based and collaborative practices (Elmborg, 2011; Raffaele, 2021). Research highlights the role of the school library as a space where analogue and digital literacies intersect, making it a laboratory for bi-literacy and digital citizenship that supports the development of information, media and digital competences and reinforces the role of school librarians as literacy educators (Cooksey, 2024; Merga, 2020). School libraries can also positively influence school wellbeing by providing quiet environments that support concentration, emotional regulation and a higher-quality learning experience (Merga, 2020; Merga, 2022). As cultural hubs, school libraries function as infrastructures that connect students, teachers, families and communities to books, knowledge resources and cultural opportunities (IFLA-UNESCO, 2022). This role becomes particularly significant in contexts where access to cultural resources is limited. In disadvantaged communities, school libraries may represent crucial points of access to books and learning materials (McDowall et al., 2025), particularly in rural areas (Mdodana-Zide & Chimbi, 2025), metropolitan peripheries marked by poverty and social hardship (Pribesh et al., 2011), small schools or communities lacking public libraries (Mangione & Pieri, 2021), and high-poverty and racially diverse communities (Lance et al., 2023). As community hubs, school libraries can operate as open nodes within local community networks and broader learning ecosystems (IFLA-UNESCO, 2025). In this perspective, they can function as bridges between schools and local communities, strengthening relationships with families and local actors and supporting participation through partnerships, extended services, intercultural initiatives and civic-oriented activities (Kranich, 2024). They can also collaborate with public libraries to expand community access to cultural and educational opportunities (Lee, 2024; Moreland & Kammer, 2020). This paper presents findings from two national studies conducted by INDIRE in 2025 and 2026 within the research project Avanguardie Biblioeducative. The research combines a national survey involving more than 6,800 teachers and school leaders with qualitative data from focus groups, interviews and observations carried out in selected school contexts. This mixed-method design makes it possible to examine both large-scale trends and situated practices through the perspectives of school leaders and teachers. The results highlight the emergence of practices that strengthen the relational and community role of school libraries, including family involvement, extended opening hours and partnerships with cultural institutions and public libraries. At the same time, structural and organisational constraints continue to limit the consolidation of school libraries as community-oriented learning environments in the Italian context. By examining both emerging practices and current challenges, the paper contributes to the discussion on how school libraries can evolve into community-oriented learning infrastructures and strategic nodes within local learning ecosystems.

SCHOOLS AS COMMUNITY HUBS: A SYSTEMIC APPROACH TO WELL-BEING AND INCLUSION IN TUSCANY

Silvia Panzavolta (Istituto Nazionale di Documentazione, Innovazione e Ricerca Educativa (INDIRE), Italy) · **Lorenza Orlandini** (Istituto Nazionale di Documentazione, Innovazione e Ricerca Educativa (INDIRE), Italy) · **Raffaella Carro** (Istituto Nazionale di Documentazione, Innovazione e Ricerca Educativa (INDIRE), Italy) · **Antonio Lezzi** (Ufficio Scolastico Regionale della Toscana (URST), Italy) · **Pierpaolo Infante** (Ufficio Scolastico Regionale della Toscana (URST), Italy) · **Francesca Gallo** (Ufficio Scolastico Regionale della Toscana (URST), Italy)

civic center · inclusion · whole-school appoaach to well-being

Building on the Australian framework on the development of schools as community hubs and civic centers (Cleveland et al., 2023) — which describes different developmental stages in the relationship between schools, families, and communities — this analysis uses data from the SET questionnaire to identify, within the Italian context, schools whose spaces, orientations, practices, and organizational conditions are consistent with this model. In particular, the data analysis makes it possible to identify a group of schools in Tuscany that show an advanced level of openness to the community and a structured integration between the school and out-of-school use of spaces, especially as far as inclusion and well-being are concerned (Chipa et al., 2022; Orlandini & Panzavolta, 2025). The SET study (Spazi Educativi Toscani / Tuscan Educational Spaces) was developed through the collaboration between the Regional School Office for Tuscany and INDIRE (Infante, Moscato & Panzavolta, 2024). The questionnaire explored the impact of interventions funded through the PNRR and other funding lines activated since the post-pandemic period on the transformation of learning environments in Tuscan schools. The aim of the study is to provide a shared basis for reflection in order to better understand the goals pursued, the results achieved, and the contribution of these changes to the construction of schools that are more inclusive, welcoming, and innovative. The research adopts a mixed-methods design (Creswell & Clark, 2018), structured in an initial phase of theoretical systematization followed by quantitative data collection through an online questionnaire. The resulting dataset is then mapped and analyzed in order to identify particularly relevant cases to be further investigated through case studies in selected pilot contexts. Starting from the collected database, schools were subjected to a classification process aimed at identifying homogeneous profiles with respect to the goals declared by institutions in relation to the interventions carried out. The analysis involved a cluster analysis approach (unsupervised grouping), designed to segment the sample into internally coherent and mutually distinct groups. The results highlighted four main clusters, which can be traced back to different policy and action orientations: inclusion, pedagogical innovation, civic center, and well-being (as in the "whole-school approach to well-being"). This contribution presents a number of Tuscan schools assigned to the civic center cluster, characterized by an advanced level of openness to the community and collaboration with local stakeholders, as well as by a stable integration between the school and extracurricular use of spaces. The selection of the case studies was guided by the aim of identifying experiences consistent with the developmental trajectories outlined by the Australian framework, in order to highlight organizational configurations and decision-making processes aligned with this interpretive perspective. Based on this subset, the paper describes: (i) the structural characteristics of spaces and facilities; (ii) the collaborative dynamics among school and community actors; and (iii) the governance and coordination mechanisms that make it possible for the school to function as a civic center.

THE SKIN OF SCHOOL: A RECOGNITION OF MULTISPECIES SCHOOLS IN URBAN SETTING

Federica D'Amato (Università degli Studi di Bari Aldo Moro, Italy) · **Carla Baldissera** (Università Iuav di Venezia, Italy)

environmental education | multispecies pedagogy | re-naturalization

Many theories identify a physical space like a fundamental element in early child development, but also in the years that follow. Recalling the role of space as a third "teacher" proposed by Malaguzzi, this contribution attempts to consider, albeit in a limited way, some projects that involving a deep transformation in the city and in schools (Carr, Lynch, 1968). In this regard, research clarifies how the physical learning environment represents an important segment that can facilitate a sense of competence, create opportunities for exploring, learning and play (Barbiero et al., 2021; Unicef, 2021). Indeed, references inform about the necessity of nature exposure for health development of young people and enormous risks derived by nature-deficit disorder (Louv, 2005; Kuo, 2015). Regular access to green spaces has mental health benefits for children (Kaplan et Kaplan, 1989, 1995; McCormick, 2017) and promote the development of soft skills, improve cooperative and environmentally sustainable behaviors (Zelenski, 2015; Goldy, 2020). Several initiatives have been launched over the last decade to make green spaces accessible to children, students, and, more generally, the entire resident community in highly impervious areas. In this vein, schools have long been viewed as potential catalysts for urban and environmental regeneration (Renzoni, Savoldi, 2026). Thanks to their widespread distribution, they can now be mobilized to respond to multiple needs and address some of the crises. Without questioning the merits of these interventions in terms of actual multi-species design, demonstrate the necessity of focusing on the relationship between education and space, between education and living. Donna Haraway (2025) tell us of urgency to create «a terrestrial revolutionary subject», so in this direction we link democracy to research of beauty and justice and we can image school like a big agorà: on the skin of square flourish a complex relationships between humans and other living species in a new idea of a community hub. In this way, the sense of community including more-than-human, where every single critters have rights to exist. Schools can represent for this a crucial element in an urban setting: opening its gates, to host collective activities in the afternoon or on a weekend, creating a new dialogue which blurs the boundaries between inside and outside. The “skin of school”, seen from this perspective, can represent a fertile ground for experimenting with the establishment of new types of complex relationships, as is already happening innovatively within the Les Cours Oasis in Paris and Colegio Reggio in Madrid (Delaunay et al., 2022; Chiesi, Ciaravella, 2024). This contribution, starting from some case studies (Paris and Madrid), want to reflect on the attempts of these projects of combining education, environmental learning and multispeciesism through urban programs or isolated good experiences.

FROM PROXIMITY SCHOOLING TO COMMUNITY HUB REFRAMING THE FORME SCOLAIRE THROUGH EDUCATIONAL COMMUNITY ALLIANCES IN ITALIAN SMALL SCHOOLS

Giuseppina Rita Jose Mangione (INDIRE, Italy) · **Stefania Chipa** (INDIRE, Italy) · **Giuseppina Cannella** (INDIRE, Italy)

proximity schooling | community hub | forme scolaire

The COVID-19 pandemic represented a critical turning point for Italian small and rural schools. In such contexts, school closure entails not only educational discontinuity but also social and demographic weakening. Building on a multi-year research trajectory conducted within the “Movimento Nazionale delle Piccole Scuole”, this paper reconstructs the pedagogical and institutional evolution that led from proximity schooling during the pandemic to the conceptualization of small schools as community hubs, coherently aligned with the OECD (2020) future schooling scenarios. The pedagogical framework integrates four interconnected perspectives. First, the critique of the forme scolaire (Maulini & Perrenoud, 2005; Vincent, 1994; Landri, 2020), whose organizational closure is challenged by small schools’ multi-age structures and strong territorial embeddedness. Second, democratic and ecological pedagogies (Dewey, 1902; Bronfenbrenner, 1979), which conceive the school as a participatory micro-society embedded within relational systems where democratic habits are cultivated through cooperation and civic engagement. Third, the notion of proximity schooling as theorized in INDIRE studies (Mangione & Cannella, 2022; Chipa et al., 2025), where territorial alliances—often formalized through Educational Pacts—mediate between curriculum, local identity and social justice, integrating formal, non-formal and informal learning within a shared responsibility framework. Fourth, the distinction between the extended or diffused school (Mangione, Cannella & Chipa, 2025) and the community school as learning hub (Chipa et al., 2025). While the extended school expands pedagogical environments by framing the territory as co-educator, the community hub represents a structurally consolidated configuration in which alliances evolve into stable multi-agency governance infrastructures, enabling the school to act as a civic and socio-educational stronghold. Within this evolution, alliances progressively move beyond pedagogical collaboration toward coordinated multi-agency frameworks integrating curricular provision with extracurricular services, skilling and reskilling initiatives, socio-educational support, cultural mediation and health-related interventions. The school thus shifts from being an expanded learning environment to becoming a territorially embedded welfare and learning hub. Methodologically, the study adopts a phenomenological and interpretative orientation (Bertolini, 1988; Giorgi, 2009; van Manen, 2014) within contemporary qualitative research traditions (Denzin & Lincoln, 2018). Conceiving educational transformation as lived and situated experience, the inquiry develops as a longitudinal qualitative research pathway combining instrumental case studies (Merriam & Tisdell, 2016; Yin, 2018) with narrative inquiry and situated observation of practices enacted in fragile contexts. Cases were selected for their generative value in illuminating emerging configurations of school form rather than for statistical representativeness. The analysis is guided by the conceptual framework of the forme scolaire, used as an interpretative lens to examine how small schools reconfigure key dimensions of schooling—such as the organization of space and time, pedagogical relationships, and the boundaries between school and community. In addition, perspectives from futures studies in education frame reflection on possible school futures as a reflexive exercise through which institutions reinterpret their role and open new spaces of action in the present (Facer, 2021; Landri, 2024). Findings indicate that the transition from proximity schooling to community hub thus represents not an emergency response but an evolutionary redefinition of school form in fragile territories.

Service Learning As A Strategy For Institutional Reflexivity And Student Empowerment

PANEL CONVENORS: Maria Dentale (University for Foreigners of Perugia, Italy); Stefania Tusini (University for Foreigners of Perugia, Italy); Matteo Gerli (University for Foreigners of Perugia, Italy)

PANEL KEYWORDS: service learning, civic engagement, soft skills

The panel aims to explore Service Learning (SL) as an integrated operational model of intervention, capable of transforming learning spaces – particularly in higher education – into laboratories of democracy, where teaching, research, and the third mission intersect in a virtuous way, generating opportunities for situated learning and civic empowerment for students. In dialogue with other innovative pedagogies – such as project-based learning and cooperative learning – SL redefines the relationship between knowing and acting, fostering co-production of knowledge and the development of civic competencies through collaboration among students, teachers, and civil society organizations. The panel is structured along two complementary directions. The first investigates SL as an ecosystem of educational innovation: a formative model that integrates research and teaching, enhances the third mission as a driver of active citizenship, and promotes virtuous partnerships between universities and communities. Contributions in this area will discuss examples of collaborative governance and inclusive teaching strategies capable of ensuring accessibility and equity, overcoming some of the most widespread systemic barriers in higher education. The second direction explores how SL enables students to enter real learning contexts (situated learning) and consolidate an integrated system of competencies: from disciplinary knowledge to soft skills, enhancing their motivation and active participation. Within these premises, the panel welcomes theoretical and empirical contributions that directly engage with these two semantic directions, interpreting SL as a strategy for institutional reflexivity, capable of generating social capital and promoting practices that transform learning spaces into ecosystems of innovation oriented toward social inclusion and active citizenship.

SERVICE LEARNING AS A PEDAGOGICAL TOOL FOR STUDENT AGENCY AND AUTONOMY

Massimiliano Naldini Indire (INDIRE, Italy)

service learning | student agency | self-regulated learning

This contribution focuses on learners' autonomy in studying as well as student agency within school-based Service Learning (SL) experiences developed in the context of the Avanguardie Educative (AE) Network (Giunti et al., 2023). These experiences are interpreted as privileged contexts for the development of self-regulatory competencies, responsibility, and active participation. Drawing on established theoretical frameworks concerning autonomous learning, metacognition, and self-regulation (Boscolo, 2012; Cornoldi et al., 2018), SL is conceptualized as a pedagogical device capable of integrating disciplinary learning, social engagement, and student protagonism (Furco, 1996; Nieves, 2006). The experiences documented within the AE Network indicate that students are involved in all phases of the learning process: from needs analysis to activity design, from the implementation of interventions to the evaluation of outcomes. Throughout this process, learners are required to independently plan their work, manage time and resources, collaborate with peers, and monitor the results of their actions. Such practices foster the development of self-regulation skills, metacognitive

reflection, and awareness of one's own study methods. In the SL projects implemented within the AE Network (Orlandini et al. 2020), a high degree of autonomy in managing activities emerges clearly, as responsibilities are directly entrusted to students, who organize their work, identify intervention strategies, and assess the effectiveness of their contributions. Research activities, material production, documentation, and dissemination of experiences stimulate sustained forms of self-directed learning, in which students become responsible for their own educational pathways and for the social impact of their actions (Lotti et al., 2025). The analysis of the documented practices also highlights how SL promotes a distinct form of situated agency, grounded in the assumption of responsibility toward oneself and the community (Mortari, 2017; Culcasi, 2025). Students do not merely carry out assigned tasks; rather, they act as intentional subjects capable of making informed decisions, solving problems, and adapting their strategies according to contexts and objectives. In this sense, service experiences become opportunities to develop a sense of self-efficacy, intrinsic motivation, and conscious engagement (Mortari, 2008). From an educational perspective, SL functions as a learning environment that makes learning processes visible and strengthens their reflective dimension. Through moments of self-assessment and reflective re-elaboration, students are guided to recognize their progress, identify critical issues, and improve their study strategies. In conclusion, this contribution suggests that SL experiences significantly contribute to the development of students' autonomy in learning and their agency. They promote a conception of learning as an active, responsible, and socially situated process, contributing to the formation of individuals capable of self-regulation, critical participation, and the conscious construction of their personal, cultural, and civic development trajectories.

REAGENTI AND STRABENE: YOUTH-LED PARTICIPATORY PRACTICES AS LABORATORIES FOR DEMOCRATIC CITIZENSHIP. COMPETENCIES, PERCEPTIONS AND ALIGNMENT WITH SERVICE LEARNING

Patrizia Lotti (INDIRE, Italy)

youth agency | photo-elicitation | RFCDC

This paper presents the findings of research conducted by INDIRE within two projects promoted by the Municipality of Trento and aimed at secondary school students across the territory: Reagenti (for upper secondary schools) which engages students in various roles of representation and active participation (school representatives, Link Group members, peer tutors, civic education laboratory participants, and Provincial Student Council delegates); and Strabene (for lower secondary schools), which fosters youth agency through actions centred on the care of common goods, European citizenship, and school democratic participation (Parlamentino). Both projects are structured spaces for youth protagonism in which students act as active agents in school life and in the local community. Now in its second year, the research adopts a mixed-methods approach combining quantitative and qualitative tools: for Reagenti, pre-post questionnaires administered to all student groups involved and focus groups with teacher coordinators; for Strabene, an innovative photo-elicitation pathway — a qualitative methodology using photographs or drawings as reflective stimuli — integrated with teacher assessment grids and student self-evaluation forms. The instruments for both projects were developed drawing on two European frameworks: the RFCDC (Reference Framework of Competences for Democratic Culture) and LifeComp, covering the areas of values, attitudes, skills, and critical knowledge for democracy, as well as personal, social, and lifelong learning competencies. Findings from the first year of Reagenti show that groups with higher levels of active

engagement report strong development of collaborative, communicative, and civic competencies: over 90% of students report having learned to listen to and respect differing opinions and to represent the group's ideas in order to achieve a shared outcome. The vast majority recognise in their experience the defining features of Service Learning and call for greater formal recognition within the curriculum. The photo-elicitation pathway of Strabene, by contrast, gives access to more tacit and emotional dimensions of experience, revealing how visual language enables students to articulate transformations in their sense of belonging, civic awareness, and responsibility towards the community that would be unlikely to surface through traditional instruments. Across both projects, a significant misalignment emerges: while students perceive substantial growth in democratic and transversal competencies, teachers tend to frame these experiences as occasions for personal development that are difficult to integrate into the formal curriculum. The second year of the research aims to address precisely this critical gap: through longitudinal comparison of pre-post data and the explicit introduction of Service Learning as a shared pedagogical framework with teachers, the study seeks to examine whether and to what extent a more intentional integration between project activities and the formal curriculum can foster greater recognition of the democratic competencies developed by students and strengthen the school's role as a Learning Hub and Civic Center.

service learning co-design · student empowerment · community collaboration

This paper presents the design and early empirical insights of Service Learning 2.0: ColLab, an Erasmus+ strategic partnership between European 6 universities and 3 civil society organizations, aimed at institutionalizing service learning (SL) through a digital and collaborative ecosystem connecting universities, students, and civil society organizations (CSOs). Positioning service learning as both a pedagogical strategy and a mechanism for institutional reflexivity, the project adopts a participatory, multi-stakeholder approach to the co-creation of SL practices. A series of collaborative workshops engage (1) academics in defining learning objectives, assessment frameworks, and integration within the Moodle LMS; (2) CSOs in designing mentorship structures and support mechanisms for student engagement; and (3) students in shaping user experience, gamification elements, and personalized learning pathways. Complementarily, focus group interviews with students from disadvantaged backgrounds explore barriers to participation, inclusion needs, and enabling conditions for equitable access to experiential learning. Additional focus groups with CSOs investigate strategies for engaging vulnerable youth in community-based initiatives. These activities generate qualitative data (workshop artefacts, reflective notes, and focus group transcripts) that capture how institutional actors negotiate roles, expectations, and responsibilities when embedding service learning systemically. Preliminary analysis highlights three key dynamics: (a) service learning as a catalyst for rethinking curriculum–community boundaries (Saltmarsh et al., 2009; Butin, 2010, Saltmarsh & Hartley, 2011) (b) co-design processes that redistribute agency toward students and community partners (Cook-Sather et al., 2014; Petri, 2015; Bovill, 2020), and (c) the importance of structured mentorship and digital accessibility for inclusive participation (Waldner et al. 2012; Burgstahler, 2015). By examining SL as a co-constructed institutional practice rather than an isolated course innovation, the paper contributes empirical evidence on how universit-

ies can foster student empowerment while simultaneously transforming organizational cultures and partnerships. The findings offer practical and methodological implications for higher education institutions seeking to scale service learning sustainably and inclusively.

aprendizaje de servicio | compromiso cívico | habilidades sociales

Service-Learning (SL) has gained significant international recognition as a pedagogical approach that promotes situated learning, civic engagement, ethical responsibility, and the integration of academic knowledge with real-world challenges. Positioned within democratic and transformative educational frameworks, SL is frequently described as a powerful strategy for connecting universities with communities. However, its rapid expansion across higher education systems has also revealed a series of tensions and structural barriers that require critical examination if its transformative potential is to be preserved. One major barrier concerns the methodological instrumentalization of SL. In some contexts, SL is reduced to a technical sequence of stages or activities, detached from its ethical and political foundations. When the primary focus is placed exclusively on student learning outcomes, the service dimension risks becoming subordinate to curricular objectives. This imbalance may weaken reciprocity and mutuality between universities and community partners, leading to hierarchical relationships or to projects designed primarily to fit academic requirements rather than being co-created in dialogue with communities. In such cases, the service component can become symbolic, superficial, or tailored to educational convenience rather than grounded in genuine social needs. A second barrier relates to organizational and institutional constraints. High-quality SL requires sustained coordination between universities and community organizations, careful planning, risk management, and alignment of academic calendars with community timelines. Without institutional structures that provide administrative support, recognition, and long-term commitment, SL often depends heavily on individual faculty dedication. This reliance can generate professional overload, burnout, and project discontinuity. Furthermore, when SL is not adequately recognized within academic career progression systems or credit structures, it remains structurally marginal despite its rhetorical endorsement. From a research perspective, additional challenges emerge regarding methodological rigor and epistemological coherence. The pressure to publish and demonstrate impact may encourage studies with limited sample sizes, short-term evaluations, or overly generalized claims. There is also a tendency to privilege positive findings, which restricts a balanced understanding of limitations, unintended consequences, or negative outcomes. Moreover, insufficient attention is sometimes paid to assessing long-term social impact, particularly from the perspective of community partners. Without robust and critical inquiry, SL risks being legitimized through advocacy rather than through sustained scholarly examination. Finally, the growing popularity of SL has produced dynamics of academic fashion and mimetic adoption. Institutions may embrace the label of SL to enhance reputation, access funding, or align with policy priorities, without ensuring deep pedagogical coherence or ethical commitment. When

expansion prioritizes visibility over substance, the emancipatory and justice-oriented foundations of SL can be diluted. These barriers do not undermine the value of SL. Rather, they highlight the need for stronger institutional reflexivity and ethical vigilance. In a global context marked by democratic fragility, social inequality, and geopolitical tensions, the challenge is not merely to multiply SL initiatives, but to safeguard their integrity, rigor, and reciprocity. A critical acknowledgment of these tensions is essential if SL is to function not as a pedagogical trend, but as a genuine democratic laboratory within higher education.

EDUCATIONAL NETWORKS AND EDUCATIONAL POVERTY IN CATANIA: SOCIAL NETWORK ANALYSIS AND COMMUNITY-FACING DIGITAL MAPPING

Simona Manuela Antonietta Gozzo (Università degli Studi di Catania) · **Elvira Celardi** (Università degli Studi di Catania) · **Marta Basile** (Università degli Studi di Catania) · **Simone La Mela** (Università degli Studi di Catania) · **Agnese Miccichè** (Università degli Studi di Catania)

educational poverty · educational networks · social network analysis

Developed within the SCOPERTA research programme at the Department of Political and Social Sciences, University of Catania, this work aligns with the Department's civic and public engagement agenda by orienting research tools and outputs towards strengthening the local educational community. Through field-based activities involving students, doctoral researchers, and grant holders, the programme combines situated learning with a community-facing service: collaborating with schools and third-sector organisations to co-produce usable knowledge and mapping tools that support coordination, orientation, and access to opportunities for actors engaged in countering educational poverty. As a specific empirical phase and output of SCOPERTA, this work reports findings from an empirical study conducted in the urban context of Catania, focusing on educational networks operating in areas affected by persistent socio-educational disadvantage. The study contributes to sociological debates on educational poverty, conceptualised as a structurally multidimensional phenomenon that cannot be reduced to economic deprivation or limited educational provision. Rather, educational poverty is understood as the outcome of relational and institutional inequalities and uneven access to opportunities. Within this framework, educational networks are conceived as key social infrastructures: their configurations shape the circulation of resources, the accessibility of support, and collective capacity to respond to social needs. Methodologically, the study adopts a mixed-methods design integrating quantitative and qualitative approaches. Secondary institutional data and documentation were analysed to reconstruct the local socio-educational context and to identify urban areas at higher risk of educational poverty. Questionnaires were administered to teachers and relevant operators. Semi-structured interviews were conducted with school actors (including principals and teachers in coordination roles), alongside representatives of third-sector organisations, families, and other local stakeholders involved in student support. Interview data were also used for network elicitation to identify additional actors and collaboration ties. Social network analysis was then applied to the resulting reported networks, focusing on network density, central actors, and brokerage roles, and examining how different relational configurations enable—or constrain—access to educational opportunities and coordinated responses. A central contribution is the comparison between "official" mappings of educational sites and services and the representations emerging from fieldwork. By examining the gap between institutional listings and practice-based accounts of operational ties, the study problematises local governance mechanisms and assesses whether existing representations capture the complexity of educational networks on the ground. Empirical materials were synthesised through a mapping workflow that led to the construction of digital maps of educational networks, conceived both as analytical devices for visualising relational complexity and as resources made available to the local educational community. The work concludes by discussing the analytical and practical potential of integrating social network analysis and digital mapping to support reflexive governance and coordinated action in unequal urban contexts.

CONTEXTS, MECHANISMS AND EFFECTS IN SERVICE LEARNING PROGRAMS: A REALISTIC EVALUATION

Matteo Gerli (University for Foreigners of Perugia, Italy) · **Stefania Tusini** (University for Foreigners of Perugia, Italy) · **Maria Dentale** (University for Foreigners of Perugia, Italy)

mechanisms | realistic evaluation | content analysis as a survey

This contribution offers a theoretical and methodological reflection on the concept of Service Learning (SL), understood as a complex and multidimensional phenomenon characterized by multiple meanings and by strong ethical, value-based, and social components. Within the architecture of educational systems, SL activates processes that engage students, teachers, and territorial actors in an integrated way, positioning itself as an educational practice with significant formative and social impact. The dialectic that shapes SL experiences revolves around three main axes: (i) strengthening collaboration between educational institutions and local stakeholders; (ii) enhancing the relationship between students and their territory by fostering the development of life/soft skills; and (iii) innovating teaching practices through the virtuous cycle generated by external activities, educational research, and teachers' professional experience. Positioned within the broader debate on Third Mission activities and the social impact of education at different levels, the contribution presents the results of a content analysis as a survey conducted on an extensive corpus of scientific publications. The aim is twofold: to reconstruct the meanings attributed to SL by practitioners, and to identify – through a realistic evauation – the social mechanisms and contextual factors that activate the development of soft/life skills in students. The proposal thus highlights the multidimensionality of SL, the cross-cutting nature of its formative effects, and the relevance of local contexts in shaping the quality and impact of such experiences.

SERVICE LEARNING BETWEEN PUBLIC AND CIVIC ENGAGEMENT: THE CASE STUDY OF UNIVERSITY OF BARI ALDO MORO

Armida Salvati (Università degli studi di Bari Aldo Moro, Italy) · **Valeria Quarto** (Università degli studi di Bari Aldo Moro, Italy)

civic engagement | public engagement | university

In recent years, Service Learning (SL) has established itself as a socio-pedagogical approach capable of integrating academic learning, civic engagement and social impact, placing itself at the intersection between innovative teaching and Third Mission (Palumbo, Scardigno 2024). This paper presents the results of a research study on the development and monitoring of SL initiatives promoted by the University of Bari Aldo Moro, with particular attention to their configuration as public engagement and civic engagement practices and to the evaluation evidence reported in the ANVUR reports (Carrera et. al., 2025). The University of Bari Aldo Moro has launched several service-learning projects and proposals, following the objectives of the Italian University Network for Service-Learning (UNiSL) and its manifesto, which aims to integrate teaching and community service, social justice, and sustainable development (Albanesi et al. 2023, p. 10). The research hypothesis is that the University of Bari Aldo Moro monitors all its initiatives to highlight the institution's role as an agent of regional development. In particular, we believe that actions within the SL framework impact the degree of reflexivity in teaching, while simultaneously underlining the institution's responsibility towards the social, cultural, and change processes of the surrounding society. The research adopts a methodological design based on documentary study and interviews, in addition to the staff in charge of the Third Mission and Public Engagement offices, with teachers and students engaged in awareness-raising activities on issues that can no longer be postponed, such as combating extreme poverty and designing a more sustainable society that is more attentive to inequalities.

Shared And Dialogic Reading Aloud And Its Equitable Benefits

PANEL CONVENORS: Federico Batini (Sapienza, Università di Roma, Italy); Lynne Murray (University of Reading)

PANEL KEYWORDS: shared reading aloud, dialogic reading, equity

In recent years, studies on reading and the equitable effects of reading and reading aloud in particular have strongly highlighted a paradigm we propose to define as "dialogical-transformative." This approach places particular emphasis on the role and engagement of end users, regardless of age, and on the effects such involvement can have, especially in terms of equity (Murray et al, 2022). Empirical qualitative and quantitative studies have demonstrated the particular effectiveness of these teaching practices on the instrumental skills of girls and boys, both young and old (Dowdall et al, 2020; Murray et al, 2016; Batini et al, 2020; Batini, Toti, 2024; Bartolucci, Batini, 2020; Batini et al, 2025). We therefore welcome contributions proposing empirical studies on the effects of reading and reading aloud conducted using methods that fit within this paradigm, as well as reviews and meta-analyses of other research such as those cited, contributions that question approaches and methods or that define and identify their theoretical assumptions, and contributions that support the improvement of practices.

ENHANCING IMPLEMENTATION OF SHARED-READING INTERVENTIONS TO ADVANCE EQUITY

Laura Justice (Ohio State University, United States of America)

dialogic reading | implementation science | child language and literacy development

Caregiver-child shared book-reading interventions are considered an evidence-based approach for improving children's language and literacy skills. However, impacts on child outcomes are conditioned on caregiver implementation of the intervention. Caregivers implementing shared-reading interventions have the responsibility of maintaining regular shared-reading sessions and incorporating specific behaviors to enhance the activity. Many barriers can impede caregiver implementation, such as (1) time pressures, (2) lack of knowledge of benefits, and/or (3) discomfort with shared-reading activities. These barriers can impede caregiver implementation of shared-reading interventions, and studies find generally high levels of attrition from such interventions. Consequently, shared-reading interventions do not reach all caregivers and children and can increase inequities between implementers and non-implementers. An implementation-science framework can be used to identify barriers of caregiver implementation of shared book-reading interventions, and introduce enablers to increase implementation. Enables comprise behavior-change strategies that can overcome barriers and increase implementation and, as a result, child outcomes from interventions. In this paper, I present evidence identifying common barriers to caregiver implementation of shared book-reading interventions, as well as behavior-change strategies designed to overcome these barriers. For instance, a common barrier is time pressures, and a behavior-change strategy that overcomes time pressure is financial incentives. I then present findings from a randomized controlled trial (RCT) designed to test four specific behavior-change strategies and their effects on caregiver implementation of a shared book-reading intervention. The RCT involved caregivers and their 4-year-old children with developmental language disorder (DLD). Study findings showed that two behavior-change strategies - financial incentives and encouraging texts - increased caregivers' implementation and mediated intervention effects on children's literacy skills. Finally, I share initial results from a larger-scale RCT testing long-run impacts of behavior-change strategies on literacy growth of children with DLD as a function of caregiver behavior-change strategies. The overall premise of this paper is that evidence-based caregiver-focused book-reading interventions can increase inequities between caregivers who can and caregivers who cannot sustain the intervention. Researchers must attend to barriers that inhibit "uptake" of such interventions and test strategies that enhance caregivers' capabilities in maintaining interventions. An implementation-science framework is imperative to conducting research addressing barriers and enhablers of caregivers' engagement in shared-reading interventions.

THE RIGHT TO ANGER AND DIALOGIC TRANSFORMATION: READING ALOUD AS A DEVICE FOR NARRATIVE EQUITY

Rosa Tiziana Bruno (Universidad "Complutense" Madrid, Spain)

Dialogic Reading Aloud | Emotional Agency | Narrative Justice

This study explores how Shared and Dialogic Reading Aloud (SAL) fosters equity by reshaping representations of anger among children and adolescents aged 5–18 in Italian schools—from binary, polarized models to layered, intercultural ones—aligning with reading as a promoter of democracy and equality (Batini, 2022). The research adopts an integrated approach that combining structured interviews (administered to a sample of 500 participants aged 5 to 18) and semi-structured interviews aimed to explore deep-seated experiences and personal narratives regarding anger. This phenomenological phase is accompanied by a critical analysis of a corpus of 50 Western-produced picturebooks and young adult novels, tracing dominant narrative models. The final experimental phase involved the implementation of the SAL practice through the dialogic mediation of the book Kakèra. Histoire d'un petit morceau by Katsumi Komagata, used as an exemplary device embodying aa Japanese-rooted vision of anger. Results reveal a close alignment: over 90% of youth responses mirrored the texts' narrative hegemony, portraying anger predominantly as a wild, binary force (repression vs. outburst) lacking generative or transformative functions. Introducing Komagata's model via SAL dismantled this view, providing symbolic tools for reflective reworking of the emotion as "ethical intelligence" and a form of knowledge (Nussbaum, 2004). In conclusion, the study demonstrates how dialogic reading's equitable benefits expand emotional repertoires and deliver "narrative justice" (Tierney & Kan, 2021). SAL goes beyond emotion regulation, enhancing youth agency and transforming anger from isolation into a driver of conscious, democratic participation—offering a model for "democracy for learning.

IRONY, DESIRE AND SELF-WRITING: READ-ALOUD AS A TRANSFORMATIVE PRACTICE IN ADOLESCENCE

Chiara Carletti (University of Siena, Italy)

irony | desire | adolescence

Within the dialogical-transformative paradigm of shared reading aloud, this paper offers a theoretical and methodological reflection on a workshop device designed for lower and upper secondary school students, developed as part of the project "Leggere Forte 4.0: Immersive Experience, the Ability to Recognise One's Own Desire, and the Development of an Ironic Mindset through Reading", carried out by the University of Siena within the Tuscan regional policy Leggere: Forte! Ad alta voce fa crescere l'intelligenza. The reflection rests on the assumption that reading aloud, when guided by specific pedagogical categories and extended into autobiographical writing and dialogue, can function not merely as a means of strengthening linguistic competences but as a transformative experience capable of reshaping the subject's relationship with the self, with others, and with one's horizon of possibility. The two pedagogical categories adopted as both interpretive lenses and criteria for text selection are irony and desire. Irony, understood not as a simple rhetorical figure, but as a cognitive device – a mindset and a form of intelligence – enables adolescents to step back from lived experience, to revisit situations in which they felt different, inadequate or exposed to others' judgement, without being overwhelmed, thereby opening up spaces for reinterpretation and divergent thinking. Desire, conceived as an orientative and generative force, engages the dimension of the possible: the desire for recognition, belonging and future that runs through adolescence and that literary narrative makes it possible to recognise, name and share. The interplay between these two categories generates a particularly fertile pedagogical field: without irony, desire risks hardening into idealisation and producing frustration when it meets reality; at the same time, without desire, irony risks becoming detachment, self-protection, and fear of exposure. It is precisely their reciprocal tension that makes the device pedagogically significant. The device,

structured across four sessions, follows a recursive cycle: reading aloud from selected texts – including R.J. Palacio's Wonder, Jeff Kinney's Diary of a Wimpy Kid, and David Yoon's Frankly in Love – followed by activating questions, autobiographical writing, and dialogic sharing. Reading aloud operates as an activator of emotional resonance: the literary text provides a narrative frame that legitimises the exploration of personal experience. Autobiographical writing becomes the device through which students reflectively rework their lived experience, giving linguistic form to what they have experienced and perceived. The subsequent dialogue transforms the individual act into a shared experience, fostering processes of mutual recognition. The potential of the device lies in the very structure of the practice: reading aloud lowers barriers to literary engagement; autobiographical writing requires no prior competences yet gives each student a space for voice and self-narrative; the ironic climate, in turn, reduces the risk of emotional overexposure and encourages participation even among those who tend to withdraw. In this sense, the paper aims to show how the interweaving of irony, desire and self-writing, mediated by reading aloud, can constitute a transformative practice that democratises access to literature and opens young people to reflexivity and the desire for a future.

THE TEACHER'S GAZE IN SHARED READING ALOUD LOGBOOKS: AN ANALYTICAL MODEL OF CLASSROOM OBSERVATION PRACTICES

Mattia Iovita (University of Perugia) · **Luca Padalino** (University of Perugia)

Shared reading aloud | Teacher noticing | Actantial analysis

Shared Reading Aloud (SRA) has been extensively studied for its equitable effects on students (Batini, 2023; Batini & Corsini, 2025). However, less attention has been paid to how this practice impacts teachers' professional vision regarding classroom participation dynamics and equity conditions. This paper addresses this gap by analyzing 720 logbooks produced by teachers involved in structured SRA programs. The objective is to examine how teachers narrate significant episodes from their practice and how these narratives reveal the roles they assume in equity-oriented participation and transformation processes. By interpreting teachers' written accounts as material traces of their professional vision (Goodwin, 1994) and integrating the teacher noticing framework (van Es & Sherin, 2002; van Es, 2011) with structural semiotics (Greimas & Courtés, 1979), this study proposes a three-level analytical model. The first level focuses on the focalization of the teacher's gaze. Logbooks are analyzed to identify which dimensions of the educational event enter the "field of visibility": classroom climate, student interventions, text content, dialogic dynamics, and ethical reflections, among others. The goal is to reconstruct the "field of the observable" constructed by the teacher, highlighting which phenomena are systematically recorded and which remain excluded from the scene. The second level examines the actantial configuration (Greimas, 1966) of the reports. These episodes are analyzed as relational systems to highlight how teachers distribute agency within the narrated scene: identifying who or what acts as the subject (teacher, students, or the reading device itself), what constitutes the pursued "object of value" (comprehension, participation, ethical reflection), and which elements are implicitly configured as "helpers" or "opponents" to the process. The third level introduces a diachronic analysis of the logbooks. As the same teachers record episodes week after week, the study tracks temporal changes in both focalization regimes and actantial configurations. The evolution of these logbooks is interpreted as the potential development of a semiotic competence within the teacher's gaze—specifically, the progressive ability to recognize pedagogically relevant events and configure them narratively. Through this tripartite perspective, the paper

proposes a replicable model for analyzing educational documentation aimed at promoting equity. The implications address both the design of logbooks as reflective tools and teacher education, fostering a professional identity capable of recognizing and valuing the participation of at-risk students.

DIALOGIC INTERRUPTIONS DURING READ-ALOUD: AN EMPIRICAL CLASSROOM STUDY WITH COLLODI'S PINOCCHIO

Flahert Joel Dhima (Libera Università di Bolzano, Italy)

Dialogic read-aloud | listener engagement | literary education

In recent years, research on reading and reading aloud has increasingly emphasized participatory approaches that actively involve learners in the construction of meaning. Within this perspective, the dialogical-transformative paradigm highlights the role of readers' engagement and the potential of dialogic reading practices to foster equitable participation in the classroom (Murray et al., 2022). Research has shown that structured reading and shared read-aloud activities can support the development of linguistic and interpretative skills across different age groups (Batini, 2022; Giusti, 2025; Hoffmann, 2024). However, the organization of interaction during read-aloud sessions remains a central methodological question. This paper presents an empirical classroom study that investigates the use of dialogic interruptions during the reading aloud of Carlo Collodi's The Adventures of Pinocchio (1883/2014), carried out in the context of the bicentenary of the author's birth. The study explores how strategically placed dialogic prompts may enhance students' narrative comprehension, imaginative engagement, and participation during a teacher-led read-aloud session. The study is theoretically grounded in Spinner's (2004) reflections on dialogic interruptions during reading aloud. According to Spinner, interruptions should be limited and placed at narratively significant moments in order to support students' imaginative involvement without fragmenting the narrative flow. Rather than leading to a systematic analysis of the text, these prompts aim to stimulate anticipatory thinking, perspective-taking, and reflective engagement with literary characters and events. To explore this approach, the study focuses on the episode in which Pinocchio enters the puppet theatre and encounters the puppeteer Mangiafoco. This narrative sequence is particularly suitable for dialogic interaction because it develops through a progressive build-up of tension: the curious entry of the protagonist into the theatre, the unexpected reaction of the puppets, the threatening appearance of Mangiafoco, and the uncertainty surrounding Pinocchio's fate before the final resolution. Such moments of suspense correspond to the structurally significant points in the narrative that Spinner identifies as particularly appropriate for dialogic interruptions. During the read-aloud sessions, the researcher, acting as the reader, introduces a small number of open prompts at carefully selected points in the narrative. These interruptions are designed to fulfil different dialogic functions described by Spinner, such as encouraging anticipation about forthcoming events, inviting students to adopt the perspective of characters, and stimulating reflection on the behaviour and motivations of the protagonists. Particular attention is given to maintaining the balance between narrative immersion and dialogic reflection. The research adopts a qualitative empirical design conducted in a classroom context. Data collection includes classroom observation, audio recordings of the read-aloud sessions and subsequent discussions. In addition to analysing classroom interaction, the study aims to produce a practical outcome: a structured description of the specific moments in the narrative where dialogic interruptions may be introduced. By identifying these moments, the study not only implements Spinner's dialogically structured read-aloud approach but also provides a structured set of dialogic questions and example responses based on the Mangiafoco episode, designed as a model for a read-aloud classroom session that teachers can reuse or adapt.

CLOSING THE GAP: DIALOGIC BOOK-SHARING AS A TOOL FOR DEVELOPMENTAL EQUITY IN LOW-MIDDLE INCOME COUNTRIES

Leonardo De Pascalis (University of Bologna, Italy; University of Liverpool, UK) · **Hallam Cooper** (University of Oxford, UK) · **Nicolas Dowdall** (Stellenbosch University South Africa) · **Lynne Murray** (University of Reading, UK) · **Mark Tomlinson** (Stellenbosch University South Africa)

Dialogic book-sharing | Low-middle income countries | Early interventions

Training parents of young children in the use of dialogic book-sharing (DBS) has been shown to be an effective, well-accepted, and cost-effective method to support improvements in child development, related to numerous key outcomes, such as language, attention, mental health, and socio-emotional understanding and functioning (Dowdall et al., 2019; Adrian, Clemente, & Villanueva, 2007). DBS parent training has been shown to be particularly effective in contexts of socio-economic disadvantage, with notable benefits evidenced in trials conducted in Low-Middle Income Countries (LMICs) (Cooper et al., 2014). Given that these countries are where the majority of the world's millions of children at cognitive and socio-emotional developmental risk reside (Grantham-McGregor et al., 2007; McCoy et al., 2016), the effectiveness of DBS in disadvantaged contexts highlights its potential in contrasting the cycle of deprivation, through the early uplifting of key developmental trajectories. Beyond contextual factors, an open question remains regarding individual influences: how does a child's developmental status interact with DBS training? The effectiveness of DBS training may for example be proportional to initial developmental conditions (i.e., children who are more advanced at baseline remain comparably more advanced post-training); alternatively, the training may magnify developmental potential, and thus developmental trajectory inequalities (i.e., children who are more advanced at baseline get even further ahead post-training); more desirably, DBS training may promote more equitable outcomes by being especially beneficial for children whose developmental is least evident (i.e., children who are less advanced at baseline close the gap post-training). The present study addressed this question by leveraging data from two randomised controlled trials conducted in South Africa: one on 14-16 month olds (Vally et al., 2015; N DBS: 49; N Control: 42), the other on 21-28 month olds (Dowdall et al., 2021; N DBS: 70; N Control: 70). In both studies, parents received an 8-week-long DBS training, and children were assessed, before and after the training, on receptive and expressive language, and attention. Results showed that in both trials, the children who most benefited from the DBS parent training were those with the lowest language and attention scores at baseline. Children who performed poorly at baseline were found to close or reduce the post-training gap from other children, in all the outcomes examined. This pattern of findings was found to be especially pronounced in the younger aged cohort. The findings from the present study strengthen the case for dialogic book-sharing: beyond being effective, well-received by parents and children, and efficient from an economic perspective, DBS actively promotes developmental equity by exerting a compensatory effect for those most at risk across key developmental areas. Crucially, this seems to be especially true the younger the child is, perfectly aligning with the WHO, UNICEF, and World Bank's Nurturing Care Framework directive to intervene early to transform developmental trajectories and maximize human potential.

SHARED AND DIALOGIC READING ALOUD IN MULTILINGUAL CONTEXTS – THE PICTUREBOOK DIE HEULE EULE/LA CIVETTA DISPERETTA IN A LADIN PRIMARY SCHOOL

Jeanette Hoffmann (Free University of Bozen-Bolzano, Italy)

multilingual picturebook | Ladin primary school | dialogic participation

The border region of South Tyrol in northern Italy has three official languages and three separate education systems (Glück et al., 2019). While the German and the Italian systems are monolingual, with the respective other language offered only as a second language, the Ladin education system is trilingual from kindergarten to secondary school. Subjects are taught equally in German and Italian, and Ladin is added for communication purposes and taught as a subject. The significance of multilingual picturebooks in educational contexts in this lived multilingualism is examined using the example of the joint reception of a bilingual German-Italian picturebook based on the question of what scope for imagination, participation and mutual understanding it creates. A second-grade class at a Ladin primary school is getting to know the additive bilingual picturebook 'Die Heule Eule – La civetta Disperetta' by Paul Friester and Philippe Goossens (2018) in a shared and dialogic reading aloud. The book is characterised by its experientiality (Fludernik, 1996) and uses a series of basic literary motifs such as loneliness and community, sadness and despair, comfort and hope, belonging and security. The audio and video recorded and conversationally transcribed conversations and multimodal interactions (Selting et al., 2010) are interpreted using key incident analysis (Kroon & Sturm, 2007). Against the backdrop of resonance theory (Rosa, 2019) and empirical research on literacy and literature education (Batini, 2023; Daly, 2021; Giusti, 2025; Hoffmann, 2025; Murrey et al., 2022; Naujok, 2023; Wieler, 2024), the analyses explore the opportunities for participation and spaces for resonance opened up by multilingual shared reading aloud discussions, with the aim of reconstructing linguistic, literary and aesthetic learning processes. The data is part of the empirical-qualitative project 'IMAGO. Picturebooks – multilingual, rhyming and wordless – in kindergartens and primary schools in South Tyrol' (Hoffmann, 2023) and provides ethnographic insight into everyday teaching and literature educational practices. The paper starts with giving an insight into the theoretical background of resonance theory and providing an overview of findings of the empirical research on reading engagement and classroom interaction with picturebooks, before introducing the complex multilingual situation in South Tyrol and the research design of the IMAGO study. The focus is on the analysis of selected key incidents from the shared reading aloud discussions, from which the multi-layered learning processes of children growing up multilingually are reconstructed. In particular, the common multilingual practices and orientation on mutual understanding become visible. An outlook on literary multilingualism in educational contexts concludes the contribution.

Agency, Citizenship and Transformative Education for Social Justice, Democracy and Sustainability

PANEL CONVENORS: Mina De Santis (Università degli Studi di Perugia); Agnese Rosati (Università degli Studi di Perugia); Veronica Riccardi (Roma Tre University, Italy)

PANEL KEYWORDS: agency, citizenship, democratic participation

The panel explores the role of student agency, citizenship, and democratic participation in schools, examining how innovative educational practices can transform school spaces into laboratories of active citizenship and conscious engagement. The contributions cover various areas: from preventing peer violence through participatory approaches with vulnerable adolescents, to co-constructing inclusive and democratic schools that foster psychological resources and a sense of responsibility among students; from generative pedagogy and transformative teaching for democratic participation, to the transformation of schools into community hubs for scientific citizenship. Additional contributions analyze how schools can serve as levers for urban change, pathways of transformative education oriented toward the common good and complexity, and youth practices of restanza in Southern Italy as forms of civic engagement and territorial regeneration.

PREVENTING PEER VIOLENCE IN SCHOOLS: THE APPLYING SAFE BEHAVIOURS PARTICIPATORY APPROACH WITH VULNERABLE ADOLESCENTS

Teresa Pietravalle (SOS Villaggi dei Bambini ETS, Italy) · **Margherita Brasca** (SOS Villaggi dei Bambini ETS, Italy)

Peer violence | child safeguarding | school wellbeing

This presentation shows the Italian experience of the two editions of the European project Applying Safe Behaviours, aimed at preventing and responding to peer violence among children and adolescents, with a specific focus on school settings. Peer violence represents one of the most widespread forms of violence experienced by young people, particularly those living in conditions of social vulnerability, and poses significant challenges for educational institutions and child protection systems. The project adopts a participatory, rights-based and multi-sectoral approach, recognising children and young people as active agents in the construction of safe, inclusive and democratic environments. Grounded in the Safe Behaviours and Protective Behaviours methodologies, and informed by an ecological and relational framework, the intervention integrates prevention, capacity building and advocacy. In Italy, the project has been implemented in lower and upper secondary schools in three local contexts: Milan, Turin and Bassano del Grappa. The intervention combined peer-to-peer training activities for students with targeted training programmes for teachers, educators, social workers and other child and youth care professionals. The objective was to strengthen life skills, awareness of power dynamics, recognition of different forms of peer violence (including bullying, cyberbullying and gender violence), and professionals' capacity to respond in a balanced, child-centred and supportive manner. By training both minors and professionals, the project methodology establishes a dual layer of protection: while children gain the tools to protect themselves, professionals improve their capacity to identify and respond to violence in a way that always prioritizes the best interest of the child. A preliminary scoping exercise, based on qualitative interviews, focus groups and surveys conducted with young

people and professionals across nine European countries, informed the development of training materials and practice guidance. Particular emphasis was placed on the voices and experiences of children and adolescents, highlighting the importance of participation, trust in adults, and safe spaces for reporting violence. The project relies heavily on peer education as a tool for effective content delivery and meaningful exchange, while also involving adults in a positive dialogue. Workshops for children are conducted by peer trainers (young adults aged 18-21). This near-peer dynamic breaks down traditional adult-child hierarchies, making the content more accessible and authentic. Also, the methodology specifically includes the participation of care-experienced young adults (care leavers) as peer trainers. Their first-hand understanding of the care system provides them with unique credibility and allows for a deeper level of trust and exchange with participants. The Italian experience suggests that participatory educational practices can enhance young people's agency, promote respectful relationships, and foster shared responsibility among schools, services and local communities. This approach promotes the creation of a culture of positive "partnership for change" between children and adults, where children's participatory and decision-making skills evolve while adults support, advise, or help them implement their ideas. The presentation discusses the implications of these findings for educational policies and school practices, arguing that schools can play a crucial role as democratic spaces for the prevention of violence, the promotion of inclusion, and the protection of children's rights.

YOUTH PRACTICES OF RESTANZA IN SOUTHERN ITALY

Alessandra Polidori (University of Neuchatel, Switzerland)

Youth | Agency | Right to remain

Over recent decades, many rural and inner areas of Southern Europe (San-Martín and Vaya, 2024), and particularly of Southern Italy (Pugliese, 2002), have been affected by progressive depopulation and what has been described as anthropological desertification. Despite its profound impact, this phenomenon has remained largely marginal in public debate, often overshadowed by media and political attention focused primarily on incoming migration flows and securitized border management. Yet, a closer look at regional dynamics reveals a significant hemorrhage: a continuous and systemic outflow of young people toward the more developed areas of the Global North. This process deprives local territories of their youngest, most educated, and potentially innovative population. Southern Italy represents an emblematic example of this crisis. According to the 2024 SVIMEZ Report, approximately 200,000 university graduates left the South over the past decade in search of better opportunities in Central and Northern Italy. Despite territorial rebalancing initiatives, such as the National Strategy for Inner Areas, public policies appear largely incapable of counteracting a trend that has become increasingly structural and deeply rooted. Alongside this critical scenario, however, recent ethnographic research conducted in Sicily within the project A European Desert? has highlighted a countervailing phenomenon: a growing number of young people consciously choose to remain in their places of origin. This choice does not amount to passive resistance but rather takes the form of active political and cultural engagement. Such practices resonate with the concept of Restanza, developed by anthropologist Vito Teti (2011, 2024). Restanza does not imply renouncing the future; instead, it represents a way of building it by anchoring it in the present and in sites of memory. It constitutes a generative and resilient response to experiences of marginality. The "right to remain$" thus entails the creation of concrete conditions that make it genuinely possible to choose to live and build one's future in one's place of origin. This perspective does not moralize the decision to leave or remain but rather claims a form of real freedom: the ability to leave or return without being driven by economic necessity or a lack of alternatives. From this viewpoint, the right to mobility must be accompanied by a right to rootedness. Experiences of restanza in Sicily reveal young people engaged in cultural, agricultural, artistic, and cooperative projects that combine tradition and innovation. Through these practices, an "alternative modernity" emerges, challenging symbolic hierarchies between North and South. The Mediterranean, often conceived as a margin or

borderland, is thus reconfigured as a vibrant political and cultural space in which categories such as belonging, development, and marginality are profoundly renegotiated. Far from being an inert area, Southern Italy appears as a laboratory for new forms of modernity grounded in care, creativity, and permanence.

PEDAGOGY AND GENERATIVE TEACHING FOR DEMOCRATIC PARTICIPATION

Mina De Santis (University of Perugia) · **Agnese Rosati** (University of Perugia) · **Edoardo Renzi** (University of Perugia)

Generative teaching | participation | generative methodologies

We are living in a historical period of profound transformations, and educational institutions cannot ignore this scenario, given their responsibility to educate and train competent students capable of facing the emerging challenges that demand problem-solving and critical analysis skills. There is an urgent need to innovate teaching practices rather than focusing exclusively on the acquisition of content that is "already established and provides the basis for understanding a certain sector or subject" (Gazzetta Ufficiale dell'Unione Europea, 2018, p. 7). Instead, it is essential to design learning pathways that foster the development of competences "to act or react to ideas, people or situations" (Ibidem). According to Fiorella & Mayer (2015), generative learning is an activity in which students actively seek to make sense of the material presented by engaging in cognitive processes such as selecting, organizing, and integrating, along with the following strategies: summarizing, mapping, drawing, imagining, self-testing, self-explaining, enacting, and teaching. Studies that examined students who prepared to explain material to others highlighted that those who prepared for teaching (without actually teaching) achieved better results than those who prepared for an immediate comprehension test, regardless of the lesson format (Fiorella & Mayer, 2014, 2013). This underscores the necessity of rethinking the teaching-learning process (Lave & Wenger, 1991), giving rise to new perspectives, particularly that of situated learning, which allows the learning experience to intertwine with the construction of plural forms of thought (Cappuccio & Maniscalco, 2020). Improving teaching practice will enhance the students' learning process and, consequently, the expected outcomes (Hunde & Tacconi, 2018). Participatory and workshop-based methodologies allow for the reproduction of "experiences similar to those of the real world in a protected and controlled environment, offering students the opportunity to act and learn from the consequences of their actions" (Bonaiuti, 2014, p. 72).Generative methodologies transform the learning environment into a true laboratory of democracy, promoting the development of critical and collaborative thinking "to support students in constructing their own professional identity through the development of soft skills" (Tore, 2024, p. 133). These methodologies activate processes of thought and action, giving rise to dynamic and contextualized knowledge where theoretical and operational dimensions intersect, dimensions that are necessary to promote change through innovative approaches (Castoldi, 2024). Knowledge is not encapsulated within disciplines but "moves from real contexts and returns to them, in a recursive relationship between experience and knowledge, theory and practice" (Castoldi, 2020, p. 42); this can only be achieved through constructive, socio-cultural, and situated learning (Ivi, p. 32). In this perspective, through cognitive elaboration, individuals engage in thinking processes that enable them to become active and aware of their role in daily life, and to experiment with and embrace innovation. Generative methodologies are capable of making people aware and capable of participating in democratic and social life "in order to promote social cohesion, inclusion, and active citizenship" (Tore, 2024, pp. 131-132), rendering education a social and civic experience.

STEPS TOWARDS SUSTAINABLE SCHOOLS: UNDERSTANDING THE RELATION BETWEEN CHILDREN'S VALUES AND THEIR ENVIRONMENTAL ORIENTATIONS

Petra Auer (Free University of Bozen-Bolzano, Italy) · **Stephanie Mian** (Free University of Bozen-Bolzano, Italy) · **Elisabeth Gsottbauer** (Free University of Bozen-Bolzano, Italy)

sustainability values childhood studies

The 2030 Agenda for Sustainable Development identifies the realization of all children's rights and the inclusion of those furthest behind as essential prerequisites for sustainable progress worldwide (United Nations, 2015). Against this backdrop, education is increasingly called upon to contribute not only to knowledge acquisition but also to children's empowerment, participation, and capacity to engage with societal challenges. The planned presentation introduces the research project STEPS, which addresses issues of sustainability through an innovative, child-centred approach. Rather than treating sustainability as an abstract or exclusively normative concept, STEPS seeks to approach it from the perspectives and lived experiences of primary school children. In doing so, the project not only gives children a voice but explicitly aims to enable experiences of self-efficacy and agency – key foundations for meaningful participation in democratic school communities.. The theoretical framework integrates Maurice Merleau-Ponty's phenomenology of the body (1945/2005) and Bernhard Waldenfels' responsive phenomenology (2006; 2010), both of which emphasize lived experience, perception, and relationality as central to meaning-making processes. In addition, STEPS is grounded in the paradigm of Childhood Studies (Clark & Moss, 2001; 2005; Schütz & Böhm, 2021), which conceptualizes children as competent social actors, rights-holders (Butschi & Heddrich, 2021; Clark & Moss, 2005) and experts of their own lifeworlds (Langsted, 1994). Building on these assumptions, the presentation outlines the project's methodological approach, which seeks to establish strong connections to children's lifeworld (Lebenswelt) and social realities (El-Mafaalani, 2021). This focus aims to address the well-documented gap between pro-sustainability attitudes and actual behaviour, which persists even when individuals endorse sustainability goals but struggle to translate them into concrete action (Ajzen, 1991; Stern, 2000). Methodologically, STEPS follows a Participatory Social Justice Mixed-Methods design (quan + QUAL; Creswell & Plano Clark, 2018). The qualitative strand is informed by the Mosaic Approach (Clark & Moss, 2001; 2005) to access children's perspectives through participatory, flexible, and inclusive methods sensitive to diverse experiences. (Clark & Moss, 2001, p. 5; Schütz & Böhm, 2021) The quantitative strand – central to the planned presentation – examines individual differences in children's values and their relationship to pro-environmental behavior.. Grounded in the Value–Belief–Norm (VBN) theory of environmental behavior (Stern, 2000), the study conceptualizes children's environmental orientations as multidimensional psychological resources that may support early forms of civic engagement. While substantial empirical evidence links values and sustainable behavior in adulthood (e.g., Steg, 2016; Bouman & Steg, 2020; Wang et al., 2021; Jacobs et al., 2018), research in childhood remains limited. The project therefore investigates associations between children's values (PBVS-C; Döring et al., 2010) and environmental orientations, including emotional affinity toward nature (CEPS; Larson et al., 2011), nature connectedness (NCI; Richardson et al., 2019), and self-reported pro-environmental behavior (PEB; Collado & Corraliza, 2015). By examining the relationships between sustainability-

related values and children's environmental orientations, STEPS seeks to contribute to a deeper understanding of the foundations of sustainable behavior in childhood. The planned presentation will report on the results of the pilot questionnaire testing and discuss their implications for the final refinement of the instrument.

CHANGING SCHOOL TO CHANGE CITY

Lucia Sorce (ICS Rita Borsellino, Italy)

participation city community

The Rita Borsellino school in Palermo has cultivated a collaborative relationship with the surrounding area for almost twenty years. From 2007 until today, many participatory planning and urban regeneration paths have been created. From anonymous space to shared space, from individuality to collectivity, from aggression to maieutics. By collaborating with stakeholders, the school took charge of the needs of pupils, families and the neighbourhood, through shared medium and long-term choices and actions of belonging: the Children's and Mothers' Museum (2007/09), the redevelopment of the football field and the creation of the playground (2016/17), the creation of the playground (2019/20), the pedestrianisation of "Via Libera" (2024); the creation of LipDub (2024), the referendum on the school apron (2025).The school, among the planning methods, is also able to include educational spaces among the variables subject to educational planning, together with contents, teaching strategies, supports and educational tools. After all, making art implies leaving signs and, more precisely, signs of community: https://addiopizzo.org/attivita/consumo-critico/investimento-colletivo/anche-il-comune-firma-il-patto-per-il-territorio-stazione-magione-kalsa/; https://drive.google.com/file/d/1n0RJNYgmR-CJUYOoaQlSucJMY3RwyJxR0/view https://www.giornalelora.it/patto-per-il-territorio-stazione-magione-kalsa-orlando-e-mattina-recuperiamo-lorgoglio-di-appartenere-a-questo-territorio/https://www.google.com/search?client=safari&rls=en&q=referendum+grembiule+ritaborsellino+palermo&ie=UTF-8&oe=UTF-8 https://drive.google.com/file/d/1ObyhiGLiNyhq7N4uvmvoBCQ2t32f9NEY/view?usp=drivesdk https://altreconomia.it/prodotto/214/ https://www.youtube.com/watch?v=VXRsem1i7-c https://www.forumdisuguaglianzediversita.org/presentazione-del-rapporto-di-ricerca-patti- educativi-territoriali-e-percorsi-abilitanti-unindagine-esplorativa

CITIZENSHIP AND DEMOCRATIC PRINCIPLES

Agnese Rosati (University of Perugia, Italy) · **Edoardo Renzi** (University of Perugia, Italy) · **Mina De Santis** (University of Perugia, Italy)

Democracy knowledge participation

This contribution is situated within the framework of a critical pedagogy that adopts complexity as its meta-model, within which epistemological, ethical and value-based, and political issues can be contextualized (Cambi, 2025). It is in this perspective, with the tensions it nurtures, that the problem of cultural poverty, related to fundamental human rights, must be contextualized. A democratic community is one in which people participate and concretely contribute to the life of the community (Dewey, 1916), however, participation today - perhaps more than in the past- requires a sense of being recognised, of feeling like an active part of a common history and destiny. Common goals and shared interests, in fact, promote cohesion among individuals, communities, and cultures.The ethical dimension underlying democracy therefore continues to play a central role today, because many unresolved issues require overcoming uncertainties and difficulties, negative conditions, and limitations that hinder citizens' participation in community life: a weak socio-cultural position (Biasin, 2021), increasing inequalities accentuated by job insecurity, economic instability, hardship, insecurity, and uncertainty create a vulnerability that is also a source of anxiety and suffering for people (Han, 2024), of apathy and alienation from what is happening. People increasingly live as indivisible monads, lacking authentic contact; most relationships arise from random and accidental collisions (Chomsky, 2014), without real interest, with a loss of faith in opportunities for redemption that can instead arise from the sense of belonging and spirit of sharing necessary to understand the meaning of existence (Biasin, 2022). Furthermore, the absence of common goals inevitably contributes to the impoverishment of the relational space, with important repercussions on democratic and civil life, because the sense of co-belonging crumbles: individuals feel alienated, detached, and with resignation mixed with passivity, they 'choose' to remain on the margins of human interaction, losing the profound sense of human togetherness (Bauman, 2010). If we understand citizenship as an expression of involvement and recognition within a community of belonging, we must also consider the skills that enable people to act actively in these life contexts (Parricchi, 2019, 2021; Fabbri & Soriani, 2021). Added to this widespread feeling of unease and vulnerability is the cognitive gap relating to information and knowledge. This gap is accentuated by disinformation that generates post-truth dynamics based on partial beliefs and opinions, founded on prejudices and fallacious premises. In this ecosystem, it is difficult for people to interpret, decode, and understand what is happening: words are misunderstood, languages are lost in a Tower of Babel, and superficiality reigns, obscuring the value of symbolic and ethical-relational dimensions (Dominici, 2026). This is where education that cultivates analytical, critical, and systemic thinking skills (Goleman & Senge, 2014) can turn educational institutions, communities, cultural associations, meeting centers, and youth spaces into places of humanization capable of generating the future (D'Aprile, 2025), promoting development, and encouraging social participation.

WORDS, POVERTY, AND SHARED READING: LANGUAGE BETWEEN ACCESS AND INEQUALITY

Keren Ponzo (University of Wien, Italy) · **Agnese Rosati** (Università degli studi di Perugia)

Shared reading | Cultural poverty | Educational subjectification

This contribution takes La grande fabbrica delle parole by de Lestrade as a theoretical device through which to interrogate the relationship between language, cultural poverty, and educational equity within the context of shared reading aloud. In the world depicted in the story, words have a price and are unequally distributed: language appears as a scarce resource, regulated by procedures that govern access to and use of it (Foucault, 1999; Foucault, 2020a). Poverty does not coincide with silence, but with the reduction of the symbolic repertoire and with the impossibility of participating in a space of speech (Giancola & Salmieri, 2024; Finetti, 2024). On this basis, reading aloud is examined as a practice capable of intervening in linguistic inequalities when conceived dialogically (Pera et al., 2023; Salvato, 2024). Equity does not depend on exposure to words, nor on a quantitative expansion of vocabulary, but on the possibility of suspending, temporarily, the logics that administer their circulation (Biesta, 2023). Within this perspective, inequalities operate not only at a material level, but through regimes of representation that render them intelligible and acceptable within a historical episteme (Foucault, 2020a; Foucault, 1999); access to shared words does not abolish inequalities, yet it enables them to be named, to be withdrawn from processes of naturalization, and to be rearticulated in new forms (Dewey, 1992). Shared reading thus institutes a scene in which words can be taken up again, questioned, and transformed, and in which participants are recognized as legitimate interlocutors (Rosati, 2022). The theoretical framework, developed in dialogue with Foucault, rests on a conception of language as a dispositif of power and subjectivation, where discourse is understood as a regulated practice that produces effects of truth and shapes what can be said, thought, and acknowledged as valid (Foucault, 1999; Foucault, 2020b; Foucault, 2014). Cultural poverty can therefore be reread as an effect of discursive regimes that delimit access to speech and its legitimacy (Finetti, 2024; Giancola & Salmieri, 2024). The reference to Biesta clarifies the pedagogical implications of this analysis. Biesta criticizes the reduction of education to a measurable process defined in terms of learning outcomes and performance, proposing instead that education be conceived as a space of subjectification in which the subject may emerge not as a programmed result but as an unpredictable event (Biesta, 2023). In this framework, shared reading is not valued for its quantifiable effects on linguistic development; rather, it is understood as a practice that interrupts dispositifs of measurement and economies of performance, opening a space in which speech may circulate without being immediately translated into competence (Biesta, 2023; Illouz, 2024). Reading aloud thus acquires a specific political valence, calling into question the discursive conditions that determine who may speak and with what authority (Foucault, 2020b; Foucault, 2019). The shared experience of the text becomes a laboratory in which access to language intertwines with the possibility of redefining what counts as common experience, rendering speech not merely an instrument of communication, but a site of democratic transformation (Dewey, 1992; Rein, 2025).

BODIES IN-MOVEMENT AS A TOOL FOR PROMOTING TRANSFORMATIVE LEARNING

Antonina Eugenia Ferruzza Marchetta (University of Palermo, Italy) · **Eliana Danzì** (University of Palermo, Italy)

embodied education | transformative learning | democratic school

This contribution explores the role of the body in teacher education within a perspective oriented toward the construction of a democratic school. (Biesta, 2023). Embodiment is conceived not merely as a functional or technical dimension, but as an epistemological, relational, and ethical device capable of redefining teaching and learning processes. (Csordas, 1994). Building upon the paradigm of embodiment, this work recognizes it as the very foundation of the cognitive experience. In this perspective, learning is not a purely abstract process but an event rooted in action and sensory perception, where the body acts as a dynamic interface between the self and the world (Stolz, 2015; Varela, Thompson, Rosch, 1991). Starting from a Foucauldian perspective, the organization of space and time within the institutional contexts often force both students and teachers to behave in a stereotypical, mechanical and impersonal ways, using the body as a vehicle of surveillance and punishment rather than as a tool of trasformation, awareness, and spiritual growth. (Foucault, 1975). In contrast to this vision, several prestigious pedagogists of the past such as Paulo Freire (1970;1996) and bel Hooks (1994) suggest an alternative approach, based on the intrisic nature of the body to exercise its 'voice'. Free movement, gesture, and mimicry enable the person to become an individual, an active participant in society, possessing agency and empowerment. Indeed, the relationship between embodiment and movement reveals profound symbolic and relational dimensions. In formative practices, the body and movement can become a tool for building self-awareness, cultivating the ability to reflect, inhabiting the world, and developing complex expressive abilities. (Mezirow, 2016). In this sense, the teaching-learning process is a transformative pathway in which movement functions as a catalyst for a disorienting dilemma.By engaging in non-habitual motor patterns, the individual dismantles rigid meaning schemes, triggering a process of embodied critical reflection that makes pedagogical transformation more profound and visceral. Specifically, this paper focuses on body percussion and dance movement therapy as multimodal devices capable of combining visual, tactile, verbal, and kinesthetic aspects. (Danzì, 2023) These practices foster an embodied exploration of personal, relational, and physical space (Mignosi, 2017, 2019; Gamelli, 2011) according to an holistic vision of the individual. The research presented aims to demonstrate, how through body practice, educational processes become tools of trasformation, enabling individuals to flourish and manifest their potential as active and engaged citizens.

SCICAFÈ TRANSFORMING A LOWER SECONDARY SCHOOL INTO A COMMUNITY HUB FOR SCIENTIFIC CITIZENSHIP AND STUDENT AGENCY

Paolo Martena (Istituto Comprensivo Calimera, Caprarica, Martignano, Italy) · **Elisabetta Dell'Atti** (Istituto Comprensivo Calimera, Caprarica, Martignano, Italy) · **Flavia Lia Aventaggiato** (Istituto Comprensivo Calimera, Caprarica, Martignano, Italy)

Lower secondary education | Community hub | Scientific citizenship

As teachers of mathematics, science, and technology in a lower secondary school in Salento, we often ask ourselves what makes a school truly democratic. Does science education belong only in textbooks, or can it become a shared language for an entire community? In our school, we developed Scicafè, a project born from the need to connect formal learning with the social and cultural life of our local area. Its core idea is simple yet transformative: students move beyond the role of passive learners and become active organisers of scientific dialogue. Each year, about 80 students in the final year of lower secondary school take part in planning and carrying out a public event involving scientists, experts, families, local institutions, associations, and citizens. They help contact guests, manage communication, define the budget, contribute to the organisation of the event, and take part in the public dialogue. What makes Scicafè especially meaningful is that it turns the school into a community hub: not just a place where knowledge is transmitted, but a civic and relational space where learning is built through responsibility, participation, and encounter. Science is no longer experienced only as a school subject, but as a shared cultural practice connected to everyday life, local identity, and public discussion. Some episodes have shown us particularly clearly the human and educational value of this experience. Nobel Prize winner Giorgio Parisi joined our students not only in scientific dialogue, but also in a moment of cultural exchange that led him to approach pizzica, the traditional Salento dance. That encounter later inspired the creation of a local orchestra dedicated to him, involving students, teachers, former students, and members of the community. In another edition, Federica Draghi shared the story of how, during lower secondary school, a science activity helped her recognise the path she wanted to follow. For our students, moments like these make science more accessible, more human, and more closely connected to life choices and aspirations. From a pedagogical perspective, the project shifts the focus from simply teaching science to fostering student agency. Students are entrusted with real tasks and responsibilities, and the interdisciplinary nature of the project creates inclusive conditions in which each student can find a meaningful role. School-based documentation and assessment practices suggest a progressive strengthening of students' organisational skills, social interaction, and ability to engage with the local context. In conclusion, Scicafè represents a meaningful example of an open and community-based school experience. By turning science into a catalyst for dialogue and social cohesion, it shows how a democratic learning ecosystem can help younger generations navigate complexity with critical thinking, participation, and a stronger sense of belonging.

COUNTER-NARRATIVES AND CLIMATE ACTIVISM: RADICAL PERSPECTIVES AND PRACTICES OF TRANSFORMATIVE EDUCATION

Davide Palma (University of Siena, Italy)

Transformative Education | Climate activism | Counter-narratives

Transformative Education (TE), as articulated under the United Nations Sustainable Development Goal 4.7, aims to enable students to align knowledge, values and practices with socio-ecological sustainability and global justice. However, in the context of an accelerated climate collapse and a persistent "permacrisis", approaches to sustainability education still appear to be too minority. In a context of increasing precariousness, education professionals may find themselves working with young people who may increasingly take radical positions towards the issues of social, political and climate crises (Merzagora et al., 2024). Starting from this, this contribution intends to propose counter-narrative devices to promote transformative education interventions. In a research experience carried out in 2024 in an attempt to explore the experiences of activists, semi-structured interviews (no. 26) were conducted with people who participate in political life, in activism and association realities. The central theme of interest was to bring to the surface beliefs and opinions about the repertoires of radical actions and civil disobedience within climate movement. From the analysis of the data, different perspectives of meaning emerged (Mezirow, 2003; Fabbri and Melacarne, 2023). One argues that environmental protection must take place through democratic tools such as laws, awareness campaigns and political pressure. The second believes that the methods of the first are not effective enough and therefore implements awareness campaigns, demonstrations in squares, flash mobs. The third, on the other hand, driven by the sense of urgency of the climate crisis, uses direct actions and a strong break with existing rules, arguing that blockades, occupations and civil disobedience can attract attention and force institutions to act more quickly. How can we work in an educational key to ensure that these perspectives do not lose permeability and become exclusive over time and a limit to rational dialectics? A viable way forward is to build counter-narratives from the bottom up (RAN, 2015; Schlegel, 2022). An example is the comic book Davide, created by Dante Caramellino and Claudio Melacarne of the University of Siena, which uses graphic storytelling as an educational tool to encourage dialogue and critical reflection. The comic tells the story of Davide, a high school boy who ends up approaching an extreme group. During a violent racist attack on a club frequented by black people, Davide realizes that he is on the wrong side of the story, stops his "companions" and decides to narrate himself independently, becoming the protagonist and not a secondary character. Counter-narratives, when they are built from bottom-up stories, can encourage the creation of spaces for dialogue and reflection. In this way, it is possible to develop educational methods and approaches that avoid increasing polarization, that know how to welcome contradictions and offer a more realistic vision of reality, made up of complexities and solutions to be negotiated and reconsidered continuously (Melacarne, 2021).

SCHOOL HEALTH EDUCATION AND GLOBAL CITIZENSHIP: INTEGRATING THE ONE-HEALTH APPROACH THROUGH PLACE-BASED AND TRIALOGICAL LEARNING. A CASE STUDY

Luca Fatticcioni (Liceo Don Lorenzo Milani - Romano di Lombardia, Italy) · **Elena Raffetti** (Karolinska Institutet - Stockolm) · **Franca Ida Rossi** (Liceo Vittorio Colonna - Roma) · **Riccardo Serraino** (Università Cattolica del Sacro Cuore - Roma) · **Carlo Torti** (Università Cattolica del Sacro Cuore - Roma) · **Elena Zacchilli** (Liceo Statale Niccolò Machiavelli - Roma) · **Giovanna Barzanò** (Rete Dialogues for Futures)

One Health | Student Agency | Global Citizenship Education

There is a gap in current school-based health programs. Traditional methods often provide concrete information on diseases but neglect the deeper psychological, ethical, social, and environmental dimensions that influence individuals and social life. This case study focuses on SASPEM (SAlute SPEcchio del Mondo), an experimental health education project that transforms elements of school curriculum into a "One-Health" educational research laboratory involving teachers, students and experts both from the health as well as from the communication world. It is supported by relevant institutions and aligns with the UN 2030 Agenda, providing opportunities to targeting Goal 3 (Health and Well-being), Goal 4 (Quality Education), and Goal 5 (Gender Equality). Moving away from vertical, top-down instruction, SASPEM adopts a holistic perspective that links human health to animal and environmental well-being. Some 10 teachers and 150 students are engaged across five Human Sciences classes and one Applied Sciences class from three prominent Italian high schools: Liceo Don Lorenzo Milani (Romano di Lombardia), Liceo Niccolò Machiavelli (Rome), and Liceo Vittoria Colonna (Rome). The project's methodology is rooted in three combined approaches: Place-Based Education (PBE): Learning is rooted in the students' local and social contexts, making abstract scientific concepts personally relevant on the basis of their experience. Trialogical Learning: Students, teachers, and experts collaborate to create a "shared object"—in this case, multimedia communication products—shifting the focus from passive listening to active production. Action Research: Educators and researchers use participant observation and reflection questionnaires to collect qualitative data, aiming to unravel participants' needs, reactions, feelings. The idea to build a replicable model of health education engaging the community and the relationship with and between different stakeholders . The practical journey begins with a high-level scientific foundation. Students analyze an important video document: the 2024-25 Inaugural Prolusion on global health from the Università Cattolica del Sacro Cuore in Rome. Their analysis serves as a springboard for intense, direct dialogues with medical experts and researchers. This interaction is designed to foster students' agency—a sense of meaningful participation- and influence over their own health and life in their community and suggests further developments. A peculiar feature of SASPEM is in fact its focus on multimedial communication. With the guidance of professional experts, each of the participating classes produces reels and podcasts translating complex medical-scientific concepts into accessible, engaging messages. Students not only deepen their scientific knowledge but also master digital storytelling and communication technologies. By sharing these student-led products on school websites and specialized platforms, a wider community dialogue is sparked, in which students have a relevant role, finding new forms of agency and esperiencing their self-efficacy within a context of interdependence. The importance of building agency and self-efficacy in students to tackle health issues is emphasised. The case study explores the implications of a journey into the One Health approach and provides an overview of strudents' perceptions, reactions and interests in health education drawing on the qualitative data collected.

Educational Professionals, Teacher Education and Organisational Well-Being

PANEL CONVENORS: Lisa Stillo (Roma Tre University, Italy)

PANEL KEYWORDS: educational professionals, teacher education, organisational well-being

The panel explores the role of educational professionals, teacher education, and organisational well-being in schools, examining how competencies, attitudes, and professional practices can contribute to creating motivating and inclusive working environments. The contributions address several areas: from managing the complexity of classroom groups and the teaching role, to perceived autonomy support among colleagues and teachers' psychological need satisfaction as factors influencing teaching styles; from multicultural attitudes and their relationship with motivating or demotivating teaching practices in primary education, to the initial training of socio-pedagogical educators, with particular attention to motivation and self-assessment of competencies. Further contributions analyse the role of early childhood teaching assistants as partners in the educational process, valuing their experiences and voices, as well as the regeneration of school public administration through life skills, illustrated by a case study of a large-scale school network in Southern Italy.

PERCEIVED AUTONOMY SUPPORT AMONG COLLEAGUES AND TEACHERS' PSYCHOLOGICAL NEED SATISFACTION: IMPLICATIONS FOR MOTIVATING TEACHING STYLES

Sara Germani (Link Campus University, Italy) · **Ludovico Vespasiani** (University of Salerno, Italy)

motivating teaching style | work climate | self-determination theory

Contemporary educational systems are undergoing continuous transformation, placing increasing professional demands on teachers and reshaping the conditions under which they perform their work. Beyond individual competencies, growing attention has been directed toward contextual factors that influence teachers' wellbeing, motivation, and practices (OECD, 2025), highlighting the need to understand how the professional environment supports teachers' psychological functioning. Self-Determination Theory (SDT; Ryan & Deci, 2017) offers a valuable framework for examining how contextual condi-

tions influence teachers' motivation and professional behaviour. According to SDT, the satisfaction of the basic psychological needs for autonomy, competence, and relatedness supports wellbeing, professional engagement, and the adoption of motivating teaching styles. For teachers, autonomy refers to the experience of volition and professional agency; competence reflects the perception of effectiveness in managing instructional tasks; and relatedness concerns feeling connected and supported by significant others within the school context, including colleagues and students. When these needs are supported, teachers are more likely to internalize professional values and enact teaching practices that support students' motivation (Moè et al., 2022; Vermote et al., 2024). Among contextual factors, collegial relationships represent a crucial yet underexplored source of support for teachers' psychological functioning. More specifically, perceived autonomy support from colleagues may foster a work climate that facilitates teachers' basic psychological needs and, in turn, supports motivational teaching practices. The present study investigates the role of perceived autonomy support among colleagues as a contextual factor associated with teachers' psychological need satisfaction. A convenience sample of 150 lower secondary school teachers completed a self-report questionnaire assessing perceived autonomy support from colleagues and basic psychological need satisfaction. To measure perceived autonomy support, an adapted short version of the Work Climate Questionnaire (Baard, Deci, & Ryan, 2000) was used. Items were reworded to reflect the teaching work context and to assess autonomy support perceived from colleagues within the school environment. Exploratory analyses provided preliminary psychometric evidence supporting the internal consistency and structural coherence of this adapted autonomy-support measure. Basic psychological need satisfaction was assessed using a previously validated instrument (Germani, 2024). Correlation analyses indicated that perceived autonomy support from colleagues was positively associated with teachers' autonomy satisfaction and with relational dimensions, both in relation to colleagues and students. In contrast, no significant association emerged with competence satisfaction, suggesting that feeling effective and capable in one's professional role may be less dependent on work climate. These results indicate that autonomy-supportive climates may be particularly relevant for fostering teachers' sense of professional agency and relational connectedness within the school environment. Although based on a small convenience sample, findings are consistent with recent international evidence emphasising the need to strengthen collaborative teaching practices and professional conditions that foster collegiality and shared responsibility (OECD, 2025). Promoting autonomy-supportive professional climates may therefore represent a meaningful pathway for enhancing teachers' wellbeing and supporting the adoption of motivational teaching practices.

MULTICULTURAL ATTITUDES AND (DE)MOTIVATING TEACHING STYLES IN PRIMARY SCHOOL: A STUDY WITH IN-SERVICE AND PRE-SERVICE TEACHERS

Clara Leone (Sapienza University of Rome, Italy) · **Sara Germani** (Link Campus University, Italy) · **Giordana Szpunar** (Sapienza University of Rome, Italy)

Multicultural attitudes | Teaching styles | Self-Determination Theory

Increasingly multicultural classrooms require teachers to adopt different teaching approaches capable of responding to diverse learners (OECD 2025). Within Self-Determination Theory (SDT; Ryan & Deci, 2017), teaching styles range from motivating (autonomy-supportive) to demotivating (controlling) practices that influence the quality of classroom interactions (Aelterman et al., 2019; Reeve et al., 2022). Research suggests that teachers' beliefs and contextual orientations — including their attitudes toward multicultural education — may function as important antecedents of how teaching styles are enacted (Buzzai et al., 2023). Multicultural attitudes are conceptualised as teachers' awareness, acceptance, and

valuing of cultural diversity, together with their disposition to integrate such diversity into educational practices. Beyond recognising diversity, education should also promote the skills, values, and conditions necessary for democratic dialogue across cultures and knowledge systems (UNESCO, 2021). These orientations are particularly relevant in learning environments, which play a crucial role in fostering inclusive attitudes and a sense of belonging among diverse learners (Gay, 2018). The present study, drawing on theoretical perspectives linking contextual beliefs to motivational teaching practices in multicultural settings, examines the relationship between multicultural attitudes and (de)motivating teaching styles among primary school teachers, while also exploring differences between in-service and pre-service teachers. Participants included 60 in-service primary teachers and 62 pre-service teachers enrolled in a degree program in Primary Education. More specifically, the pre-service teachers included in the sample were students who had completed at least 100 hours of supervised practicum in primary schools as part of their degree curriculum. Teachers completed validated self-report measures assessing multicultural attitudes using the Teacher Multicultural Attitude Survey (Buzzai et al., 2023) and perceived teaching styles using the Situations-in-School questionnaire (Moè & Katz, 2020). Correlational analyses indicated that more positive multicultural attitudes were associated with stronger endorsement of motivating teaching styles and lower endorsement of demotivating styles. Group comparisons showed that pre-service teachers reported higher motivating tendencies and more positive multicultural attitudes, whereas in-service teachers displayed relatively higher demotivating orientations. These findings align with recent international evidence (OECD, 2025), which suggests that teachers who have completed their training more recently tend to feel more effective in multicultural classrooms. Although based on a small sample, these results provide preliminary insight into how professional context and attitudes toward diversity relate to teaching styles. Interpreted through an SDT lens, the findings suggest that multicultural orientations are connected with the motivational quality of instructional practices. Importantly, differences observed between professional stages highlight the need to address multicultural awareness and motivation-supportive teaching approaches early in teacher education, before contextual pressures potentially reshape instructional styles. Supporting such competencies during initial training may represent a key lever for fostering inclusive and motivating primary classroom environments.

INITIAL TRAINING OF SOCIO-PEDAGOGICAL EDUCATORS: MOTIVATION TO ATTEND L-19 BACHELOR'S AND COMPETENCE SELF-EVALUATION

Maria Grazia Rionero (Università degli Studi di Firenze) · **Sara Germani** (Link Campus University)

socio-pedagogical educators | initial training | academic motivation

In the context of contemporary higher education, the initial training of socio-pedagogical educators is crucial for supporting their motivation, perceived self-efficacy, and readiness to face the complexity of educational practice (Fioretti, 2023). This study, conducted with 358 third-year students enrolled in Italian L-19 degree courses in Educational Sciences, aimed at examining how motivation to attend the degree program relates to the professional competences developed at the end of the course of study. Grounded in Self-Determination Theory (Ryan & Deci, 2017), the research investigates the role of different motivations (i.e., extrinsic and intrinsic) in sustaining the development of the two key professional competencies (Rionero, 2025a): psychological and pedagogical principles and methods to managing educational practice, which include the ability to apply theoretical frameworks to design and adapt educational interventions; and reflective autonomy and relational management, which concerns critical self-analysis and ethical relationship building

with educational stakeholders. The data were collected through an ad hoc questionnaire comprising: the SCOPE scale, developed to assess self-perceived professional competencies (Rionero, 2025a); and the Italian version of the Academic Motivation Scale (AMS-C) (Manganelli et al., 2019) to capture different forms of academic motivation along the self-determination continuum. Data reveal that socio-pedagogical educators are predominantly driven by autonomous forms of motivation, aligning with national reference literature (Fasan, 2019). Students enroll in the L-19 degree program to recognize the value of educational practice in the social context. Correlation analyses confirm that identified motivation is positively associated with both areas of self-perceived competencies measured by the SCOPE scale, as well as with intrinsic motivation. Previous studies underscore the importance of active, practice-oriented learning environments (such as laboratories, project work, and internships) as crucial contexts for consolidating professional competences (Rionero, 2025b). These experiences foster the integration of theory and practice and play a key role in shaping students' professional identity (Rosati & De Santis, 2020). They also represent formative opportunities to experiment with educational practice in protected settings, engage in collaborative learning, and develop reflective awareness of one's strengths and areas for improvement. Overall, the results suggest that democratic and motivating university environments are essential for supporting autonomous motivation and, consequently, enhancing perceived professional competencies. In particular, it is essential to value students' perspectives, promote reflection, and offer meaningful opportunities for initiative and collaboration. The study discusses implications for designing initial training pathways in Educational Sciences Bachelor's (L-19), advocating for curricula that intentionally combine explicit and shared competence frameworks with pedagogical practices oriented toward metacognition, reflective autonomy, and the development of a solid professional identity.

BEYOND BUREAUCRACY: REGENERATING PUBLIC ADMINISTRATION THROUGH LIFE SKILLS. A CASE STUDY OF A LARGE-SCALE SCHOOL NETWORK IN SOUTHERN ITALY.

Ivano De Luca (Istituto Comprensivo Statale Di Taviano "Francesco Dimo", Italy) · **Simone Aldo Buonporto** (IDCERT Società Benefit srl)

Life Skills | LifeComp Framework | Public Administration Regeneration

Themes and Purposes In an era dominated by digital acceleration and the "platformisation" of education, the human factor remains the most critical asset for democratic regeneration. This proposal presents the results and the pedagogical framework of "PerForma PA", a pioneering project led by the Comprehensive Institute "Francesco Dimo" (Taviano, Italy). The project coordinated a massive network of 22 educational institutions across the provinces of Lecce and Bari, involving hundreds of teachers and public employees in a transformative learning journey based on the European LifeComp framework. The primary purpose of this contribution is to demonstrate how the systematic teaching of Life Skills—specifically Personal, Social, and "Learning to Learn" competencies—can act as a catalyst for professional excellence and democratic participation within public institutions. While the Italian National Recovery and Resilience Plan (PNRR) often focuses on technological infrastructure, our project argues that true innovation stems from the emotional and social resilience of the "human capital" that animates the school system. Methodology and Content The abstract explores the three pillars of the certification path developed in collaboration with IDCERT: Personal Area: Focus on self-regulation and stress management as tools to "educate for hope" and prevent burnout in the public sector. Social Area: Leveraging neuro-didactics to foster empathy and conscious communication, transforming the school into a space for equitable conflict resolution and respect for the common good. Learning to Learn: Promoting a "Growth Mindset" and critical thinking to navigate the complexities of algorithmic society and misinformation. Innovation and Results The proposal highlights a unique model of

"Institutional Generosity": after the initial phase, the I.C. Taviano decided to release the training modules for free to all Italian Public Administration employees. This move represents a shift from a competitive to a collaborative logic in educational policy. Conclusions The study concludes that certifying non-cognitive skills is not merely a professional upgrade but a democratic necessity. By fostering empathy and critical awareness, the "Taviano Model" provides a replicable blueprint for schools to lead the transition toward a more human-centric and democratic Public Administration, capable of facing global challenges with resilience and social responsibility.

EARLY CHILDHOOD TEACHING ASSISTANTS AS PARTNERS: CENTERING THEIR LIVED EXPERIENCES AND VOICES

Hannah Thompson (Texas A&M University, Texas, United States) · **Lori Caudle** (University of Tennessee, Knoxville, Tennessee, United States) · **Cathy Grist** (Western Carolina University, North Carolina, United States) · **Margaret Quinn** (Texas A&M University, Texas, United States) · **Frances Harper** (University of Tennessee, Knoxville, Tennessee, United States)

Assistant teachers | professional learning communities | culturally responsive pedagogy

In the United States, teaching assistants (TAs) in public pre-kindergarten classrooms navigate unique positions when compared to K-12 teaching assistants; their roles and experiences remain understudied and misunderstood (Thompson et al., 2025). Early childhood teaching assistants are often the unseen backbone of the classroom and are an overlooked part of the early care and education workforce (Sosinsky & Gilliam, 2011). TAs most often share deep connections with the community, mirroring ethnic and racial backgrounds of the young children they serve and possessing personal associations to the neighborhoods where they teach (Cramer & Cappella, 2019; McLean et al., 2021; Thompson et al., 2025; Whitebook et al., 2006). In their daily practice, TAs take on more of the physical and mental work compared to certified teachers, as shifting responsibilities have moved them out of their prescribed roles into roles of direct instruction and behavior management. TAs are more likely to engage in forms of invisible labor (e.g., cleaning the classroom between activities, care tasks, driving the bus) for less compensation, less access to professional learning resources, and fewer opportunities for upward mobility than their counterparts (CSCCE, 2022; Press et al., 2024). This presentation will highlight the roles teaching assistants play in early care and education environments in the United States, as evidenced through culturally responsive, community-based methods situated within two research-practice partnerships (RPPs): The Culturally Relevant Robotics: A Family and Teacher Partnership (CRRAFT) and the Trauma-Informed Preschool Studies Partnership (TIPS). Time-bound experiences of TAs across both RPPs will be explored through the implementation of two culturally relevant preschool robotics programs co-developed with educators and families. The narratives of nine teaching assistants will be amplified through this work. Using means of transformative qualitative analysis, semi-structured focus groups will be examined to understand their lived experiences. Focus groups for both partnerships took place over multiple time points during the implementation of the culturally responsive robotics programs. Ladson-Billings' (1995) culturally responsive pedagogy framework will be used to situate the voices and lived experiences of the assistant teachers. This work amplifies teaching assistant voice-directed efforts across both RPPs and how democratic dialogue and shared meaning takes shape when assistant teachers are situated as equitable partners in the work. Our results suggest partnerships act as professional learning communities and are responsive spaces for all educators to engage in thought about their daily practice and forms of collective inquiry. TAs reflected on how they collectively navigated the early childhood classroom environment and structural systems that impacted them as educators. Preliminary results found that across both partnerships, there were times in which the assistant teachers felt capable of engaging in meaning-making

and contributing to the democratic process. Results also demonstrated how TAs navigate daily practices and roles that shifted over time. This work is critical in understanding the intersection of structural and systemic factors that impact early childhood educators in the U.S., often impeding their work, limiting their participation, and reducing their ability to engage in the process of dialogic learning to better support young children's learning and development.

THE ETHEROGENEOUS CLASS: HOW THE TEACHERS SHOULD BE TO FACE THE COMPLEXITY OF SCHOOL GROUPS

Alessia Cividin (UCIIM, Italy)

Visualization | hetherogeneous class | reflectiveness

Contemporary schools are increasingly characterized by complexity, diversity, and rapid social change. Educators are therefore required to develop professional attitudes and practices that go beyond traditional models of teaching. Drawing on the pedagogical reflections of Luigina Mortari, this abstract argues that teachers should cultivate a reflective, ethical, and care-oriented approach to education in order to respond effectively to the challenges of contemporary schooling. Mortari emphasizes the importance of reflective practice, where teachers continuously examine their actions, assumptions, and relationships with students. In complex educational environments—marked by cultural diversity, technological transformation, and evolving social expectations—teachers must become professionals capable of thoughtful judgment rather than mere transmitters of knowledge. According to Mortari, education should be grounded in an "ethics of care," which places attention to the student at the center of pedagogical action. This perspective requires educators to listen carefully to students' experiences, recognize their uniqueness, and create learning environments that support personal growth as well as cognitive development. Such an approach also demands emotional sensitivity and relational competence, since teaching involves not only intellectual guidance but also the nurturing of human relationships. In complex school systems, where students bring varied backgrounds and needs, the ability to care, empathize, and respond thoughtfully becomes a fundamental professional skill. Another key element highlighted is the importance of graphic reasoning. Teachers should develop the habit of reflecting graphically on their practice in order to interpret situations and make responsible decisions. Visualization allows educators to move beyond rigid methods and instead adopt flexible strategies suited to the specific context of their classroom. This stance also supports continuous professional learning, encouraging teachers to question routines, adapt to new challenges, and collaborate with colleagues in the pursuit of educational improvement. Finally, educators must view teaching as a form of practical wisdom. Rather than applying fixed techniques, they are called to interpret complex situations and act with sensitivity, responsibility, and awareness of ethical implications. Mortari's perspective suggests that the teacher's role in contemporary schools is not simply to deliver curriculum content but to guide students in meaningful learning processes and support their development as persons. In conclusion, facing the complexity of contemporary school requires educators who are reflective practitioners, ethically

grounded professionals, and caring relational figures. Inspired by Luigina Mortari's pedagogical thought, teachers can respond to educational complexity by cultivating attentiveness, and an ethic of care that places the human dimension of learning at the center of educational practice.

Governance, Inequalities and Educational Pathways

PANEL CONVENORS: Dalila Raccagni (Università Cattolica del Sacro Cuore, Italy); Paola Zini (Università Cattolica del Sacro Cuore, Italy)

PANEL KEYWORDS: governance, inequalities, transitions

The panel explores governance, inequalities, and educational pathways, examining how policies, institutional practices, and social factors shape opportunities and trajectories in education. Contributions address a range of topics: the governance of educator appointments in South African public schools, highlighting issues of policy enactment, power, and accountability; education under shifting political contexts in Afrin, focusing on harm regulation and legitimacy; and collaborative school-family partnerships aimed at participatory renewal through joint planning between teachers and parents. Further contributions analyze career and educational guidance across theory, policy, and practice, support for university-to-professional transitions through internships and lifelong guidance in educator training, and the university pathways of young people with migrant backgrounds, as observed at the Human Rights Social Desk in Palermo. Finally, the panel examines the challenges faced by migrant and refugee women in Italy and Greece regarding the recognition of university degrees, navigating tensions between devaluation and self-determination. Overall, the panel highlights how governance structures, social inequalities, and institutional practices intersect to shape educational access, progression, and empowerment.

SCHOOLING UNDER SHIFTING RULE: EDUCATION, HARM REGULATION, AND LEGITIMACY IN AFRIN

Marie Kortam (War Child, France)

Northwest Syria | armed groups | Harm

This paper examines education as a site of harm regulation, political control, and legitimacy-making under shifting systems of governance, drawing on an in-depth life-history interview with a senior educator and school director in Afrin, a district in northwest Syria that has experienced successive regimes of authority from Syrian state institutions, to Kurdish self-administration, and, since 2018, Turkish-backed armed factions. These transitions profoundly restructured the local school system, transforming education into a frontline arena of governance rather than a stable public service (Mampilly 2011; Arjona 2016). Anchored in the analytical framework of the Beyond Compliance Consortium (BCC), the paper analyzes educational practices through four interlinked lenses: harm, need, restraint, and legitimacy, developed to explain civilian protection and governance in contexts where legal enforcement is fragmented or absent (Kemp et al. 2023). This framework allows education to be examined not as a neutral service, but as a regulatory space in which violence, protection, and authority are negotiated. Empirically, the paper shows how schooling in Afrin became a mechanism through which harm was both produced and contested. Forced curricular changes, language segregation, loss of recognized certification, and the intrusion of armed actors into schools generated educational harm that translated into displacement, family flight, and long-term erosion of trust. At the same time, schools emerged as spaces of acute need, particularly for children exposed to forced recruitment, ethnic discrimination, and the collapse of institutional protection (Novelli, Lopes Cardozo & Smith 2017). The analysis highlights the role of educators as de facto harm regulators. Through informal negotiation, selective compliance, and refusal, such as resisting the removal of students for military purposes or contesting arbitrary administrative orders, school leaders enacted forms of restraint grounded in moral authority rather than institutional power. In this context, legitimacy did not derive from armed control or formal governance structures, but from the perceived capacity to protect children and preserve educational continuity amid political volatility (Suchman 1995; Hoffmann & Kirk 2013). By centering an educator's trajectory across changing regimes, the paper demonstrates that education in Afrin functions as a semi-autonomous field in which governance is enacted through everyday decisions about access, language, discipline, and certification (Moore 1973). These micro-practices expose the limits of policy-

driven compliance models and show how harm prevention and restraint emerge from localized moral authority rather than centralized control. The paper contributes to debates on democracy and learning by reframing education in conflict settings as a core site of political regulation, legitimacy production, and civilian protection

CAREER AND EDUCATIONAL GUIDANCE ACROSS THEORY, POLICY, AND PRACTICE

Teodora Lattanzi (University of Turin, Italy) · **Ester Bonomi** (University of Milan, Italy)

Career guidance | Policy analysis | Career development theory

Over the past decades, career guidance has undergone profound conceptual and institutional transformations. Changes in the organization of work and the globalization of economies have reshaped both the nature of careers and the expectations placed on individuals navigating education and labor markets. Within this context, career development theories have progressively evolved from models based on stable and linear trajectories toward frameworks emphasizing adaptability, lifelong learning, and self-directed career management (Marcarini, 2012). This paper examines the relationship between career development theory and guidance policies in the European and Italian contexts. Drawing on a review of relevant literature and a qualitative analysis of policy documents across the multilevel governance, the study investigates the extent to which policy frameworks reflect, or diverge from, theoretical developments in the field. The analysis is structured around three key analytical dimensions: definitions, aims, and beneficiaries of career guidance. From a theoretical perspective, the evolution of career development theory is interpreted in relation to broader socio-economic transformations (Boland, 2024): the transition from relatively stable labor markets (Adlya & Zola, 2022) to more flexible and precarious employment regimes has contributed to the emergence of concepts such as boundaryless (Arthur & Rousseau, 1996) and protean careers (Hall, 1996), as well as renewed emphasis on career adaptability, reflexivity, and identity construction. While these frameworks have been presented as empowering individuals to navigate complex life trajectories, critical perspectives (Hooley, 2022; Aldrovandi et al., 2024; Sultana, 2022; Thomsen & Hooley, 2022) highlight how they also reflect neoliberal shifts that relocate responsibility for career management from institutions and organizations to individuals. The policy analysis focuses on European lifelong guidance frameworks and Italian national and regional guidance policies. Findings show important areas of convergence between theory and policy: both conceptualize career guidance as a lifelong process, emphasize individual agency and adaptability, and frame guidance as a key component of lifelong learning. At the same time, significant tensions emerge: while literature increasingly emphasizes identity development, reflexivity, and social justice (Tomlinson et al., 2018; Hooley & Sultana, 2016), policy frameworks tend to prioritize employability, workforce activation, and alignment with labor market needs. As a result, theoretically rich concepts are often translated into more instrumental policy objectives linked to economic competitiveness and human capital development. To explore how these dynamics unfold in practice, the paper presents the case study of #Orientati, a career guidance initiative implemented by the Veneto Region and financed through European Social Fund resources. The case illustrates how theory-informed policy principles can be translated into concrete guidance interventions through territorial networks involving schools, training providers, employment services, and local stakeholders. At the same time, it highlights how institutional mandates, sectoral governance structures, and broader neoliberal policy frameworks shape the practical implementation of guidance initiatives. The paper concludes that bridging the gap between theory, policy, and practice requires stronger dialogue between scholars, policymakers, and practitioners. Such collaboration is essential to ensure that career guidance systems support not only labor market integration but also the development of meaningful, sustainable, and socially inclusive career trajectories.

BETWEEN DEVALUATION AND SELF-DETERMINATION: MIGRANT AND REFUGEE WOMEN CONFRONTING THE RECOGNITION OF UNIVERSITY DEGREES IN ITALY AND GREECE

Teresa Ester Cicirelli (Università degli studi di Bari Aldo Moro, Italy) · **Enrica Sgobba** (Università degli studi di Bari Aldo Moro, Italy) · **Anna Fuasta Scardigno** (Università degli studi di Bari Aldo Moro, Italy)

migrant students | credential recognition | higher education

Across Europe, higher education systems are increasingly shaped by global mobility, yet institutional frameworks often struggle to recognise the prior educational trajectories of students with migrant and refugee backgrounds. Despite the principles enshrined in the UNESCO Global Convention on the Recognition of Qualifications concerning Higher Education (2019), recognition procedures remain lengthy, opaque, and unevenly implemented. This contributes to processes of deskilling and cultural-capital devaluation, limiting migrants' educational continuity and reinforcing patterns of exclusion already documented in European contexts (Pastore et al. 2023; Scardigno et al. 2019). Universities thus emerge as ambivalent arenas: while they may reproduce structural inequalities, they can also function as strategic spaces for democratic inclusion and capability expansion (Nussbaum 2000). Adopting an intersectional and critical perspective (Crenshaw, 1989), this paper analyses the experiences of migrant and refugee women who completed or partially completed university studies in their countries of origin and subsequently sought recognition or continuation of their studies in Italy and Greece. The research compares two institutional contexts: in the Apulia region (Italy), participants were refugee students enrolled in university programmes; in the Attica region (Greece), participants were women holding foreign university degrees but largely excluded from the higher education system due to complex and opaque credential-recognition procedures. The study draws on 18 qualitative case studies conducted through focused interviews (Merton, Fiske & Kendall, 1956): 10 refugee students reached through the Learning Centre (CAP) at the University of Bari Aldo Moro (affiliated with the RUIAP network) and 8 refugee women in Greece contacted through local NGOs. The differing recruitment channels already signal a structural divergence: while the Italian context provides university-based inclusion mechanisms, the Greek case highlights the absence of institutionalised academic support structures for non-European migrants. This contrast enables an exploration of how national and institutional arrangements shape educational justice in practice. The interviews reconstructed participants' migration trajectories, previous socio-economic conditions, educational backgrounds, professional aspirations, and experiences of discrimination. Gendered inequalities, racialisation processes, unpaid care responsibilities, and experiences of gender-based violence emerged as crucial intersecting factors influencing access to higher education. Findings reveal recurring administrative and legal barriers, language obstacles, and institutional rigidities in credential recognition. In Italy, despite bureaucratic complexities, access to university enrolment functioned as an intermediary mechanism capable of reactivating agency and fostering academic belonging.

Academic participation allowed some women to renegotiate their identities as students and professionals, partially counteracting dynamics of downgrading. In Greece, conversely, the opacity and restrictiveness of recognition procedures generated widespread disillusionment, often leading women to redefine their professional aspirations outside academic pathways. The comparison highlights how universities may either mitigate or reinforce inequalities affecting students with migrant backgrounds. When institutional arrangements provide structured inclusion pathways, higher education can operate as a site of democratic negotiation between equality and difference, enabling self-determination and social participation. Conversely, when recognition systems remain exclusionary, educational injustice risks becoming naturalised. By foregrounding refugee women's experiences, this contribution speaks to broader debates on educational justice, intersectionality, and the democratic role of universities in increasingly diverse societies.

THE SCHOOL-FAMILY PARTNERSHIP FOR PARTICIPATORY RENEWAL: A COLLABORATIVE PLANNING INITIATIVE BETWEEN TEACHERS AND PARENTS

Dalila Raccagni (Università Cattolica del Sacro Cuore, Italy) · **Paola Zini** (Università Cattolica del Sacro Cuore, Italy)

educational culture | co-responsability | co-constructed approach

Amidst social change and the growing fragility of educational roles, the relationship between schools and families is crucial for supporting the development of younger generations and strengthening the democratic nature of the school system. However, this relationship is not guaranteed. Rather, it is often marked by ambivalence. Alongside experiences of trust and collaboration, there are also communication difficulties, misunderstandings, and a sense of distance between teachers and parents. In light of these challenges, it is crucial to reevaluate the ways in which families and schools interact and collaborate, creating new opportunities for dialogue. With this in mind, a research-training project was undertaken during the 2024/2025 academic year in a primary school belonging to a comprehensive institute in the province of Brescia. Entitled "School and Family: Towards a Shared Educational Partnership". the project involved first-grade teachers and parents. The project aimed to enable teachers and parents to get to know one another and collaborate using a co-design methodology, build a school-family relationship that informs educational choices and actions taken by parents and teachers alike, and support the children's growth and development in a positive way. The project was introduced during a school assembly at the beginning of the academic year and was followed by bimonthly meetings between teachers and parents, as well as a final session in May. Teachers and parents worked together in groups to identify educational goals and define appropriate behaviors in response to emerging challenges. The research team monitored the process by holding regular meetings with the teachers. During these sessions, the teachers received support through active methodologies and techniques such as the "Wall of Wonders," the "Educational Cultures Table," and "Spaces for Participation." These techniques were designed to foster mutual exchange and reflection. The final assembly provided an opportunity to evaluate the overall process. This collaborative experience facilitated dialogue between the educational cultures of the school and the family. It allowed participants to experience educational coherence through shared commitments. This paper aims to present the process activated through the research-training project, the methods and techniques employed, and the outcomes achieved.

SUPPORTING THE TRANSITION FROM UNIVERSITY TO PROFESSIONAL PRACTICE: INTERNSHIP AND LIFELONG GUIDANCE IN EDUCATOR TRAINING

Roberta Bertoli (Università di Parma, Italy)

Internship | Educator | Guidance

Within initial training programmes for future educators, increasing attention is being paid to enabling students to develop a clear awareness of the professional roles they will undertake upon completion of their academic studies (Popov, 2020). This issue becomes particularly relevant in a context characterised by a growing crisis in the educational sector: despite the significant demand for educators within educational services, recruiting qualified staff is becoming increasingly difficult (Premoli, 2024). Supporting students in the transition from higher education to the labour market therefore requires the development of a personal "toolkit" enabling them to interpret professional contexts, design their own professional trajectories, and critically reflect on the experiences they encounter (Gambacorti-Passerini, 2019; Salerni, 2016). Within this perspective, the concept of lifelong guidance becomes central, and the internship represents a key educational context in which such processes can take place. As both an orientation device and a setting for the development of professional competences—and particularly as an in-between space (Mele et al., 2021)—the internship offers a privileged opportunity for students to gain awareness of the competences required of educators and of the complexity of educational practice. This contribution aims to explore how specific pedagogical and organisational tools within internship programmes can foster students' agency, reflexivity, and awareness of the educational profession, while also strengthening collaboration between the university and local educational services. Within the internship pathway of the University of Parma, an organisational context analysis tool was introduced in the academic year 2023–2024 in order to promote an active and inquiry-oriented stance among students during their placements. The instrument supports students in analysing the organisational characteristics of the services hosting interns, including management structures and the types of services provided within the local area. In addition, to strengthen orientation processes before the internship experience, Open Days dedicated to the exploration of educational services were organised during the academic years 2024–2025 and 2025–2026 in collaboration with host organisations in the Parma area. Data were collected through the organisational analysis tool and through student satisfaction questionnaires related to the Open Day initiatives. Preliminary findings suggest that the organisational analysis tool supports students in developing a more analytical understanding of the contexts in which they undertake their placements and encourages reflective engagement with organisational and professional dimensions of educational work. Furthermore, the Open Day initiatives appear to facilitate more informed and conscious choices regarding internship contexts, while also strengthening dialogue between the university and local educational services. The study highlights the importance of designing internship pathways as reflective and participatory learning environments that support students' agency and professional awareness. Moreover, the collaboration between universities and local organisations emerges as a key factor in fostering meaningful orientation processes and in promoting a continuous exchange between academic training and professional practice.

Continuity, Pedagogical Care, and Educational Justice in Hospital and Home Instruction

PANEL CONVENORS: Elisabetta Faraoni (Università Niccolò Cusano, Italy); Francesco Maria Melchiori (Università Niccolò Cusano, Italy)

PANEL KEYWORDS: Hospital Education, Pedagogical Care, Educational Continuity

Hospital and home instruction represent contexts in which the capacity of education systems to guarantee rights, continuity, and participation is critically tested. Illness exposes students to concrete risks of educational discontinuity, isolation, and reduced learning opportunities. In these settings, the pedagogical dimension plays a central role in supporting students' learning pathways through relational care, personalized approaches, adaptive teaching practices, and coordinated professional collaboration. The panel aims to examine how these contexts make visible several fundamental issues for democratic education, including equitable access to learning opportunities, the quality of educational relationships, the organization of teachers' work, and the ability of institutions to ensure continuity and coherence in students' educational trajectories. Available evidence shows that service fragmentation, territorial disparities, and the complexity of students' needs significantly affect the schooling experience of learners undergoing medical treatment. The panel welcomes theoretical and empirical contributions addressing the pedagogical and ethical foundations of education in contexts of illness; teachers' professional practices and their interactions with students and families; organizational and didactic strategies designed to support educational continuity; and policies and governance frameworks that influence access to and the quality of hospital and home instruction. The objective is to highlight the specific contribution of pedagogy in interpreting, sustaining, and guiding educational action within care-related learning environments.

HEALING BY CARING: THE EDUCATIONAL RELATIONSHIP IN THE HOSPITAL SCHOOL

Gemma Errico (Università Niccolò Cusano, Italy)

Educational relationship · educational community · hospital school

This contribution argues the prevailing confluence between educational relationship and care relationship within the hospital school, which makes the latter an educational community. The latter, founded on the therapeutic alliance, implies the centrality of the person and, therefore, a multidisciplinary team aimed at the empowerment of the individual in fragile conditions. It is highlighted how, in the hospital school, caring also includes education and how the educational role is distributed among all those who collaborate towards an inclusive learning environment. Thanks to the activity of the school-hospital network as educational community, it is possible to guarantee educational continuity avoiding the isolation of hospitalized students undergoing medical treatments, requiring prolonged hospitalization, and preserving the stability they need.

THE AAT MODEL IN HOSPITAL SCHOOLS AS A GENERATIVE PEDAGOGICAL APPROACH

Diana Olivieri (Università Niccolò Cusano, Roma, Italy) · **Carlo Macale** (Università Niccolò Cusano, Roma, Italy)

Care · Agency · Talent

Hospital school represents a liminal educational context, characterized by radical vulnerability, temporal discontinuity, physical constraints, and a strong external direction of time and decisions. In such an environment, education is traditionally interpreted according to a compensatory logic, oriented towards curriculum maintenance and the prevention of dropout. This contribution takes a pedagogical-social as well as didactic perspective and proposes a redefinition of

hospital school as a privileged social laboratory of educational democracy and radical personalization of learning, transcending the deficit perspective and embracing the expression of talent as a universal educational right. The central thesis is that, in healthcare contexts, agency cannot be considered a pre-existing resource of the student, but must be understood as a pedagogical outcome (passive healthcare vs. intentional and active educational care), intentionally constructed within conditions of dependence and vulnerability. In this sense, the semantics of the word "care" is redefined, as a new paradigm of social pedagogy, in its double meaning of "to cure" and "to care", which recalls the double etymology of education as educare and ex-ducere. The theoretical framework integrates critical pedagogy, the capability approach, the pedagogy of vulnerability, and Umberto Margiotta's theory of education, reinterpreting agency as the subject's epistemic positioning – that is, a stable internal disposition as a tendency to act actively and effectively in the real context, to transform it according to a project of improvement – and advocacy as an ethical-pedagogical practice of addressing vulnerability. This integration gives rise to the AAT (Agency–Advocacy–Talent) model, formalized in the relationship: Talent = f (Constructed Agency X Intentional Advocacy). In this model, agency and advocacy co-construct each other in a recursive cycle that generates empowerment and potential development. Methodologically, the AAT approach is not a standardized operational method, but rather a design approach for the construction of mediated educational environments, in which tools such as expressive workshops, authentic tasks, storytelling, narrative portfolios, personal projects, and creative digital media find a preferential place, as privileged tools for the emergence of talent as a production of meaning, rather than a performance. From this perspective, the hospital school presents itself as a micro-ecosystem for talent development and an extreme context for testing educational democracy: not only by ensuring access to education for all, but by defending the right of every student, even the vulnerable, to build a personal vision and self-project for the future, according to the principles of educational and social justice. In this sense, talent becomes an indicator of educational justice, and vulnerability becomes not a limitation to be compensated for, but an ontological condition to be inhabited and embraced, as a generative space of possibility.

AUGMENTATIVE AND ALTERNATIVE COMMUNICATION IN HOSPITAL SCHOOL: A MATTER OF EDUCATIONAL AND HEALTH JUSTICE FOR STUDENTS WITH COMPLEX COMMUNICATION NEEDS

Edoardo Dalla Mutta (University of Genoa, DLCM, Italy; ITD CNR, Italy) · **Vincenza Benigno** (University of Genoa, DLCM, Italy)

Hospital School | Augmentative and Alternative Communication | Complex Communication Needs

Hospital school services are designed to guarantee educational continuity for students experiencing illness and prolonged hospitalization. Hospital teachers work within a care-centered environment, significantly different from traditional classroom settings, in which the student's health status is the priority (Benigno et al., 2017). Within this context, however, education is not a secondary activity but a constitutive dimension of the therapeutic pathway (Rodríguez et al., 2023). Among the critical competencies required of professionals working in pediatric hospital settings is the ability to communicate effectively with children who present Complex Communication Needs (CCN), whether due to temporary or permanent disabilities (Costello, 2000). The absence of effective communication strategies may represent an additional source of stress, frustration and isolation for hospitalized students, especially in contexts where speech is compromised (Pina et al., 2020). Augmentative and Alternative Communication (AAC) has been described as an effective strategy to enhance interaction, safety, and participation, also in intensive care and pediatric settings (Costello, 2000). At the same time, research on complex AAC interventions underscores the need for structured, systemic approaches that include

training and coordinated support of all the communication partners involved (Costello, 2000; Rodríguez, 2023). The successful implementation of AAC in hospital school therefore requires a shared commitment and aligned practices between educational and healthcare professionals. As research highlights the need for specific AAC training among health care professionals in clinical contexts, comparable structured preparation is equally necessary for hospital teachers, who operate within the same care-centered environment and support children with CCN (Woodring & Harmon, 2023). Building on these considerations, this paper argues that accessible communication in hospital schooling should be conceptualized as a shared domain of educational and health services. AAC is examined not merely as a compensatory tool, but as an infrastructural condition enabling agency, participation, and continuity for students with CCN, including those with neurological impairments, developmental disorders, medically induced communication limitations or non-native speakers. The theoretical discussion is informed by preliminary findings from an exploratory survey conducted with Italian hospital teachers (n = 24). The majority of respondents report working regularly with students presenting CCN. While most of the participants declare familiarity with AAC strategies, only a minority indicate having received structured or formal training in AAC implementation. These data, while based on a non-representative and exploratory sample of Italian hospital teachers, suggest a structural asymmetry: communicative complexity is recurrent in hospital school, yet, unlike special education teachers, hospital teachers are not formally required to receive specific preparation in working with students with CCN. From this perspective, accessible communication emerges as a systemic responsibility rather than an individual initiative. If communicative mediation depends primarily on personal experience or informal knowledge, students' effective access to both learning and care may vary across contexts, raising concerns of educational and health justice. The paper calls for the integration of communicative accessibility into teacher training models and interprofessional collaboration in hospital schooling, framing it as a foundational condition for inclusive and equitable continuity in clinical-educational environments.

PAIN, TEMPORAL DISCONTINUITY, AND EDUCATIONAL CONTINUITY: AN ONTOLOGICAL, PHENOMENOLOGICAL, AND HERMENEUTIC PERSPECTIVE ON HOSPITAL AND HOME SCHOOLING

Letizia Cipriani (Università degli Studi Niccolò Cusano, Italy) · **Andrea Velardi** (Università degli Studi Niccolò Cusano, Italy)

Pain | Hermeneutics | Educational continuity

Severe illness and chronic pain conditions do not merely cause school attendance interruptions but impact the temporal, relational, and agentive structure of the subject's experience. In this sense, hospital and home schooling can be further valorized not only as compensatory measures for curricular continuity but as practices capable of sustaining experiential continuity in situations of vulnerability. This contribution proposes expanding the notion of educational continuity through an ontological, phenomenological, and hermeneutic perspective on pain, understood as a temporal and transformative process of experience. Pain, especially in chronic or protracted forms, does not present itself as an isolated episodic event but as a qualitative reorganization of the experiential horizon. It reconfigures the field of perceived possibilities - what, in ecological terms starting from Gibson and in recent enactive reinterpretations (Coninx & Stilwell, 2021), has been described as the field of affordances, i.e., perceived possibilities for action - restricting access to practices, relationships, and future projects. Illness alters time perception, compromises projectuality, and modifies the sense of belonging to the school and social context. In this framework, school interruption is not merely an organizational issue but can amplify a discontinuity already underway on the experiential level. The absence of shared educational practices risks consolidating the contraction of the subject's horizon of possibilities. Conversely, the pedagogical relationship in hospital or home

settings can contribute to reopening the agentive field: through relational continuity, the ritual of learning, and linguistic and hermeneutic mediation, understood also as a dialogical space of mutual recognition (Gadamer, 2018), it supports the connection between past, present, and future, countering relational isolation and fostering the narrative coherence of the student's identity. The analysis integrates phenomenological and narrative studies on pain - including research on the ontological modelling of pain narratives drawn from a dataset of over 800 accounts (Cipriani 2025) - with a neurophenomenological perspective, recognizing that transformations in painful experience involve bodily, affective, and cognitive dimensions, including capacities for anticipation and planning, dimensions directly implicated in the student's ability to engage with educational processes. In this perspective, educational continuity concerns not only access to content but the recognition of the student as a temporal and projective subject whose experience has been reorganized by illness. The objective is not to replace existing pedagogical models but to offer a theoretical framework capable of dialoguing with them and making explicit the temporal and relational dimensions already operative in educational practices. From this viewpoint, educational justice does not exhaust itself in formal equality of opportunities but implies support for reconstructing the horizon of possibilities of the ill student. Hospital and home schooling thus emerges not only as a didactic intervention but as a pedagogical care practice that contributes to recomposing the existential continuity interrupted by illness.

TEACHER SELF-EFFICACY AND EDUCATIONAL CONTINUITY IN HOSPITAL SCHOOLING: PROFESSIONAL AND ORGANIZATIONAL CONTEXTS

Elisabetta Faraoni (Università Niccolò Cusano, Italy) · **Francesco Maria Melchiori** (Università Niccolò Cusano, Italy)

Hospital Schooling | Teacher Self-Efficacy | Educational Continuity

Hospital schooling and home instruction operate at the intersection of education and healthcare systems, where educational continuity represents a fundamental condition for ensuring the right to education for students undergoing medical treatment. In these contexts, teaching must contend with variable clinical schedules, frequent interruptions, and the need to maintain constant coordination with students' schools of origin. Previous research has shown that working in such situations requires specific professional competencies and effective collaboration among professionals belonging to different institutional systems (Aquario, 2017; Benigno et al., 2017; Ferrari et al., 2022). However, empirical analyses of the professional and organizational conditions that shape the quality of educational responses in care contexts remain limited. Within this framework, teacher self-efficacy assumes particular relevance, as it influences the ability to manage unstable and complex educational situations (Bandura, 1997; Sharma et al., 2012) and can be interpreted as an indicator of the systemic coherence of educational action. This contribution presents an exploratory mixed-methods study with convergent data integration conducted with 47 teachers working in hospital schooling. The questionnaire investigated professional competencies, teacher self-efficacy through the Teacher Efficacy for Inclusive Practices (TEIP) scale, and perceived professional development needs. In parallel, interviews were conducted with school principals responsible for coordinating hospital and home instruction services in order to explore the organizational conditions within which teaching activities take place. Quantitative analyses were conducted using non-parametric tests and bootstrapping procedures, complemented by linear regression models aimed at examining the association between declared competencies and levels of self-efficacy. Thematic qualitative analysis made it possible to relate perceptual data to the dynamics of interinstitutional coordination. The results show medium-to-high levels of perceived self-efficacy (median TEIP = 4.11;

median ACP = 4.39 on a six-point scale). Declared professional competencies are significantly associated with self-efficacy, whereas age and professional experience do not emerge as determining factors. These findings suggest that perceptions of efficacy are not automatically linked to years of service but depend more strongly on the specificity of professional competencies and on the quality of the organizational context in which teachers operate. The interviews confirm the central role of coordination with students' schools of origin and healthcare professionals, as well as the need to adapt educational planning to students' health conditions, in line with findings from European and Italian studies (Fabre & Labrell, 2024; Faraoni & Melchiori, 2024).Overall, the findings indicate that self-efficacy in care contexts cannot be interpreted as an isolated individual trait but rather as the outcome of an interplay between professional competencies, organizational arrangements, and the quality of interprofessional relationships. Strengthening specialized professional training and establishing stable coordination models therefore does not represent a secondary intervention but a necessary condition for ensuring educational continuity and equity in learning opportunities for students experiencing illness. The study allows teacher self-efficacy to be interpreted as an expression of institutional responsibility in guaranteeing educational continuity, offering empirical evidence that may contribute to rethinking training, coordination, and organizational structures in hospital and home instruction services.

NIETZSCHE'S GREAT HEALTH AND SUBJECTIVE WELL-BEING: AUTOBIOGRAPHICAL WRITING AS SELF-CARE

Giulia Parzani (Laboratorio di metodologia della ricerca e analisi dei dati per le scienze del comportamento) · **Maria Vittoria Battaglia** (Laboratorio di metodologia della ricerca e analisi dei dati per le scienze del comportamento)

Autobiography · well-being · narrative medicine

In the context of school in hospital (SIO), illness constitutes a biographical fracture that challenges the narrative, relational and educational continuity of the student. The SIO is therefore an institution that recognises the importance, alongside the clinical aspect, of personal stories and the meaning attributed to illness by the patient (Bosisio & Cavalletto, 2025), intending to allow the individual to remain the protagonist of their own educational journey, even in times of crisis, of "a disruption of the existing balance" (Torre, 2014, p. 19), and to "promote the well-being [...] of children in hospital and prevent feelings of anxiety, boredom, loneliness and depression" (MIM, AGIA, & AOPI, 2020). This contribution fits into this context and offers a theoretical reflection that lies at the intersection of philosophy, pedagogy and narrative medicine, addressing the theme of writing and creativity as an exercise in well-being in times of crisis and taking Nietzsche's concept of great health as a central interpretative category. The establishment of a dialogue between these different perspectives stems from the definition of philosophy as Erlebnis, life experience (Nietzsche, 1967/1887, p. 1), or as a practical, therapeutic path (Faustino, 2017; Long, 1990), which enables one to navigate through crisis. This definition aligns with the literature on well-being, which understands the latter as the ability to cope with reality (Diener, Lucas, & Oishi, 2002; Karademas, 2007). In hospital settings, it also encompasses the capacity to manage one's illness (Bosisio & Cavalletto, 2025). This concept of wellbeing as overcoming, rather than eliminating, negative states is linked to Nietzsche's concept of great health – the health of the convalescent – a state of "human-superhuman wellbeing" (Nietzsche, 1967/1887, a. 382) that incorporates illness, as it must be continually regained. Great health is, therefore, a dynamic and transformative process that finds a condition of possibility in the exercise of creativity and, more specifically, in autobiographical writing,

a tool for healing and understanding the self. Nietzsche states that his writing arises not from a theoretical intent but from the need to overcome a crisis felt first and foremost as something that concerns him personally: “My writings speak only of my overcoming: within them is «me», with everything that was my enemy” (Nietzsche, 1967/1886, p. 1). These words resonate with contemporary reflections on the formative power of autobiographical writing as “taking oneself by the hand and retracing [...] even the fractures of life” (Sofia, 2024, p. 105). This multi-perspective dialogue gives rise to the proposal to understand writing as an exercise in externalising suffering, which allows it to be analysed and then re-accepted. In this way, writing becomes a practice that enables authentic care “that opens up the possibility for others to find themselves” (Torre, 2010, p. 574) and which can therefore take the form of a path of education towards wellbeing capable of enhancing the awareness and transformative abilities of the individual, to overcome oneself (Nietzsche, 1965/1886) and find oneself even in crisis (Demetrio, 1996).

READING ALOUD AS PEDAGOGICAL CARE IN HOSPITAL SCHOOLING : A TEACHING PROPOSAL FOR SECONDARY SCHOOL BEYOND LITERACY

Chiara Pastore (Università Link Campus, Italy)

Reading Aloud | Hospital Education | School Inclusion

Hospital schooling represents one of the most challenging contexts in which education systems are called to guarantee continuity, inclusion, and educational justice. Students undergoing severe medical treatment often experience prolonged isolation, fragmented learning trajectories, and significant emotional vulnerability. Within this framework, pedagogical care becomes central to sustaining participation and maintaining meaningful connections with learning. This paper explores the introduction of reading aloud as a pedagogical and relational strategy within hospital education, particularly for secondary school students affected by serious illness, whose educational pathways are frequently interrupted at a critical stage of identity and cognitive development. In the Italian context, the Scuola in Ospedale and Istruzione Domiciliare services aim to ensure the right to education and prevent school disengagement among students unable to attend traditional classrooms. National guidelines highlight the importance of personalized teaching practices and relational support in these environments. Despite the growing recognition of narrative practices in educational research, reading aloud in hospital schooling remains an underexplored field, especially in relation to teacher professional practices and inclusive pedagogical frameworks in secondary education, where curricular pressures and disciplinary specialization often limit the adoption of shared reading practices. Drawing on literature on shared reading, pedagogical care, and democratic education, the paper argues that reading aloud can function as a low-threshold, flexible, and inclusive didactic strategy capable of fostering emotional safety, narrative identity, and continuity of learning even in highly fragile contexts. The contribution outlines a teaching proposal designed for lower and upper secondary school settings, emphasizing dialogic pauses, interpretative discussion, and the teacher’s voice as a stabilizing relational presence. In this perspective, reading aloud becomes not a compensatory activity but a structured pedagogical practice that allows students-patients to

remain intellectually engaged while participating in a shared cultural experience despite clinical constraints. The contribution situates reading aloud within a broader framework of democratic education, interpreting it not only as a literacy practice but also as a space of encounter, recognition, and participation. By focusing on the professional culture of teachers working across school, hospital, and home environments, the paper highlights how reading aloud can reshape pedagogical relationships, enabling teachers to balance curricular goals with care-oriented practices. Particular attention is devoted to the secondary school context, where dialogic reading may support critical thinking, interpretative agency, and relational continuity during periods of medical vulnerability. The study contributes to current debates on educational continuity and pedagogical justice by proposing reading aloud as an accessible and sustainable practice capable of rehumanizing educational experiences in contexts of illness. It also identifies future research directions, including qualitative investigations on teachers' reflective practices, students' narrative engagement, and the development of inclusive reading protocols tailored specifically to hospital secondary schooling.

WORDS THAT CARE: CREATIVE READING AND EMOTIONAL EDUCATION IN PEDIATRIC CONTEXTS – THE "GENTLE FAIRY TALES" PROJECT

Federica Gualdaroni (Università Niccolò Cusano-Roma, Italy) · **Francesca Favotto** (Università Niccolò Cusano-Roma, Italy) · **Serena Noè** (Università Niccolò Cusano-Roma, Italy)

Creative Reading | Emotional Education | Narrative Practices

The project "Gentle Fairy Tales" is conceived as an educational initiative currently under development, inspired by the memory of Matteo Losa, journalist, writer, and photographer who passed away in 2020 after fourteen years of oncological illness. His personal experience and literary production fostered a profound reflection on the pedagogical value of storytelling and, in particular, on the fairy tale as a symbolic narrative device capable of making complex experiences accessible through the language of emotions. This perspective also echoes the long pedagogical tradition that has attributed a formative and symbolic value to storytelling in educational processes. Within the broader tradition of the history of pedagogy, narrative and fairy tales have long been recognized as formative tools capable of mediating the understanding of human experiences and emotional development. In the book Piccole fiabe per grandi guerrieri, published by Mondadori, Losa presents fairy tales as a narrative space for exploring and recognizing emotions related to fear, fragility, change, and illness. Within this perspective, storytelling emerges as a tool for awareness and emotional re-elaboration, potentially supporting both children and adults in situations of vulnerability. This view aligns with pedagogical reflections on the formative function of narrative, widely developed within the tradition of the history of pedagogy, and provides the theoretical foundation for the project. The initiative aims to develop, in the future, creative reading workshops within pediatric hospital wards, configuring itself as an educational intervention in non-formal contexts closely connected to processes of growth and learning. The project intends to introduce reading aloud and narrative reworking as practices capable of fostering emotional, linguistic, and relational competences, while also contributing to psychological well-being during the experience of care. The project design envisages the involvement of children, parents, and caregivers in structured activities integrating shared reading, creative writing, and expressive sensori-motor practices. In this framework, reading is conceived as a shared space for meaning-making, in which symbolic elaboration can support the

recognition and verbalization of complex experiences. Reading would therefore be promoted as an emotional, relational, and embodied experience, encouraging active listening, dialogic interaction, and creative expression, potentially culminating in the creation of a collective narrative product. The project is situated within the framework of expanded school education, understood as an integrated system of formal and non-formal contexts contributing to the holistic development of the person. From this perspective, narrative assumes a transversal function, connecting emotional literacy, linguistic competences, and active citizenship, in coherence with the person-centered care guidelines promoted by the World Health Organization. Although not yet implemented, the project is envisioned as a replicable educational model capable of integrating cultural and care dimensions, while enhancing Matteo Losa's narrative and pedagogical legacy. In this light, the forthcoming film adaptation of Un altro giorno insieme, Losa's second book, may further amplify the cultural impact of the initiative, strengthening the dialogue between education, health, and community and consolidating storytelling as a shared practice of care. In this perspective, the project also invites further pedagogical reflection on the educational potential of narrative practices in contexts of care and vulnerability.

THE EDUCATIONAL DIMENSION AS A PROTECTIVE FACTOR IN PAEDIATRIC PALLIATIVE CARE AT HOME

Michele Corriero (università Nicolo Cusano, Italy)

palliativecare interdisciplinarity pedagogy

Article 24 of the United Nations Convention on the Rights of the Child (CRC), adopted by the United Nations General Assembly on 20 November 1989, recognises the right of all children and adolescents to enjoy the highest attainable standard of health and to benefit from medical and rehabilitation services, so that no child is deprived of the right to access such services. Paediatric palliative care (PPC) is an integral part of children's right to healthcare; it represents the evolution of the healthcare system towards an increasingly bio-psycho-social approach, characterised by interdisciplinary and highly relationship-based work within the social and healthcare sector, which includes the pedagogical and educational dimension. CCP offer all children with chronic and incurable conditions requiring highly complex care the right to experience the various stages of psychological, emotional, communicative, relational, spiritual and social development, tailoring ongoing care to the different needs associated with their growth (Maruzza Foundation). L'OMS definisce le cure palliative pediatriche come l'attiva presa in carico globale di corpo, mente e spirito del bambino e comprende il supporto attivo alla famiglia (OMS 1998). L'obiettivo è migliorare la qualità della vita del piccolo paziente e della sua famiglia e il domicilio rappresenta, nella stragrande maggioranza dei casi, il luogo scelto ed ideale di assistenza e cure. Le cure palliative pediatriche sono un ambito della Medicina ormai affermato e riconosciuto (Legge 38/10), in continuo sviluppo come testimoniato dal progressivo incremento numerico degli hospice e dei servizi di cure palliative domiciliari. Thanks to scientific advances in recent years, the number of children with life-threatening or life-limiting conditions has been steadily increasing in Italy and throughout the Western world. We wish to present the scientific findings of a study on paediatric palliative care at home in the city of Bari (Italy), a pilot project launched in 2022 by the 'Ad Curam' Social Cooperative which, in partnership with the Local Health Authorities, has established a specialist team providing paediatric palliative care at home throughout the Puglia region. The work is carried out by a multidisciplinary team comprising a palliative care specialist, an anaesthetist, nurses, psychologists, a priest and an educationalist. The concept of care (Mortari, 2026) and of caring (Calaprice, 2020) is expressed in socio-health, psycho-educational and spiritual terms, based on a highly integrated, synergistic and complementary approach by the entire team. This methodology is the cornerstone of a continuous approach to healthcare, psycho-educational and spiritual support, which optimises the management of complex family dynamics characterised by feelings of anger, helplessness and guilt, and, in many cases,

depression arising from the perception of loss, separation and the possibility of death. In this process, the scope of care and emotional support extends not only to the child and the family but also to the entire team through multidisciplinary supervision.The emotional impact and high levels of stress affect the entire team, either implicitly or explicitly; they need support and the opportunity to express and share any limitations, fears and needs they may have.

ALLIANCES AND BOUNDARIES: NETWORKING BETWEEN SCHOOL, FAMILY AND HEALTHCARE TEAM IN HOSPITAL SCHOOLING AND HOME EDUCATION

Sara Selmi (Università Pegaso, Italy) · **Giorgia Cesarini** (Università Pegaso, Italy)

hospital schooling | home education | role boundaries

Hospital Schooling and Home Education represents one of the most challenging contexts for contemporary educational systems, as within it the right to education confronts daily the discontinuity of studies and the complexity of needs of students who, in their everyday lives, undergo medical treatments, rehabilitative interventions and long periods of hospitalisation. Illness creates a rupture in school and daily routines, distances the student from their peer group and reduces learning opportunities at a developmental stage already characterised by a particularly delicate phase of life. In this scenario, the function of the educational system is to ensure a formative continuity that depends both on access to learning opportunities which all students should be able to access and on the quality of relationships among the various actors involved: teachers, families, healthcare teams and students themselves. This contribution offers a theoretical and interpretive reflection, grounded in international literature, on the role of teachers in interprofessional collaboration processes between school, family and healthcare team in Hospital Schooling and Home Education contexts. In particular, it analyses interprofessional collaboration processes, understood as a necessary condition for ensuring educational continuity and the well-being of the student in care. The interpretive framework focuses on the importance of the work carried out among the various actors involved, who co-construct interventions for students in care, each with different competencies, knowledge and institutional mandates. The literature review highlights how, at times, the fragmentation of services and the ambiguity of professional roles can represent structural barriers to educational and pedagogical continuity. When teachers, psychologists, doctors and families fail to respect their respective roles, boundaries become unclear and undefined, and the child may experience a sense of loneliness and abandonment. International research on interprofessional collaboration (WHO, 2010; Reeves et al., 2017) highlights how professionals' ability to communicate through a shared language ensures higher quality teamwork, building professional alliances aimed at promoting the psychophysical well-being of the student in care. Clear role boundaries and shared educational goals are key to interprofessional collaboration. The contribution adopts the concept of the mesosystem (Bronfenbrenner, 1979) to analyse the conditions that make possible an educational intervention centred on and structured within the daily practices of care contexts, characterised by interprofessional collaboration, through the interrelations among the various microsystems in which the patient is embedded: family, school, hospital. It is therefore of fundamental importance to establish an adequate collaborative alliance among these microsystems, grounded in the recognition of the institutional actors involved as both holders and recipients of knowledge aimed at the psychological, physical and educational well-being of the student in care. In conclusion, this contribution aims to stimulate reflection on interprofessional collaboration processes between school, family and hospital as a necessary condition for promoting the right to education of all

students, even when illness arises and prevents regular school attendance. In Hospital Schooling and Home Education, the networking of various professionals does not represent an extraordinary mode of operation, but rather a habitual to ensure that students in care have equal opportunities and continuity in their educational pathways.

HOSPITAL EDUCATION. THE OVERVIEW OF A CHALLENGING SITUATION FOR INCLUSIVE PROCESSES.

Milena Pomponi (Uuniversity Roma Tre, Italy)

Keywords: hospital education | institutional overview | inclusive policies

The hospital school (S.i.O.) is one of the models of excellence in the national education system and is a true laboratory for research and innovation (Ministerial Decree 641/2019). The hospital school service was the first to experiment with and validate new pedagogical and teaching models, aimed at: organizational, methodological, and evaluation flexibility; the personalization of teaching and learning activities; the educational use of technology; and special attention to the educational relationship. The S.i.O. operates in school sections dependent on state schools, for which its operation is authorized within the hospital based on specific agreements between the schools and the hospital trusts/foundations. Educational and teaching activities are conducted in accordance with therapeutic and healthcare priorities, a complex "balance" to establish and maintain due to the concrete risks of discontinuity in educational and learning processes, resulting in a reduction/impoverishment of educational opportunities and social isolation. Hospital schooling allows for the continuity of studies and guarantees the fundamental rights to education and health, enshrined in the Constitution, pursuant to Articles 3, 34, and 38. The person-patient-student status is shared by all professionals, both healthcare professionals and teachers, with whom we come into contact according to the principle of the therapeutic alliance. This establishes a coordinated professional collaboration that places the patient-student at the center of healthcare and educational-teaching efforts. From an educational-teaching perspective, it would be essential to optimize the opportunities offered by institutional school policies from the perspective of inclusive policies (Booth & Ainscow, 2014) in terms of psychological-relational assistance, educational-teaching approaches/practices geared toward personalization, and the use of modern technologies. Of particular interest are the National Digital School Plan, experiences such as INDIRE's Educational Avant-garde, and, above all, the National Network of Hospital Schools, which share experiences and research gained over the years and propose customizable and individualized models for an inclusive learning curriculum. With regard to the latter (the curriculum), it is important to focus not only on teaching interventions, but also on the organization of space and time, materials, and resources, and ensure that it is monitored according to the needs of the individual-patient-student. Within this context, teachers play a significant role (Faraoni & Melchiori, 2024). Indeed, they must be understood as agents/carriers of an inclusive approach that transcends the logic of "special" and medicalization (Bocci, 2021). With reference to this last consideration, teachers' professional development/learning, both initial and in-service, is characterized as an element to be strengthened through research-training programs (Pomponi, 2025; 2025) capable of providing quality-rich responses to educational, didactic, and social challenges. In light of this overview, it is clear that hospital education is a difficult and highly challenging "reality," both for the school and the hospital. This requires investigation into inclusive policies related to organizational processes, understood at various levels and with different stakeholders, that highlight the quality of hospital and home-based education.

Ethno-racial Diversity and Other Biographical Traits in Educational Professions: Possible Challenges for Democratic Education

PANEL CONVENORS: Rita Bertozzi (Università di Modena e Reggio Emilia, Italy); Mariagrazia Santagati (Università Cattolica del Sacro Cuore, Italy)

PANEL KEYWORDS: racialized teachers, minority education professionals, citizenship education

To prevent democratic education from becoming detached from concrete experiences of inclusion and to ensure that education embraces different cultures, languages and religions, we need to question the gap that exists between the multicultural school population and the homogeneity among teaching staff. Although unexplored in Italy, the topic has been widely analyzed in international research. Racialized teachers, minority teachers, teachers with migrant backgrounds show an interconnection between personal and professional identity. Understanding how such biographical traits shape educational practices is crucial and affect interactions with students, colleagues, parents. The purpose is to explore the topic and its implications for young people's careers and for students' learning and expectations, as well as possible connections with experiential citizenship education. Abstracts will be invited to focus on: - How do teachers and educators reflect the heterogeneity of the school population? Is the access to the teacher profession equitable, valuing diversity and reflecting demographic transformations? What is the impact of racialization on teachers' professional identity and working conditions? How migrant backgrounds intersect with other biographical traits of teachers (gender, disability, sexual orientations, etc.) and what are the implications? - Which strategies, measures, policies are needed to diversify the teaching force and challenge systemic inequalities and discrimination? What effects could these diversities of education professionals have on students? The topic can be placed within the broader context of citizenship education and challenges democratic societies with regard to their ability to act responsibly towards future generations and counteract structural racism, fostering more inclusive school environments

ROMA TEACHERS' RESILIENCE: A SOCIOLOGICAL STUDY OF LIFE COURSE EXPERIENCES AND PROFESSIONAL IMPACT

Tímea Ceglédi (MTA-DE Future Awareness Development Research Group (University of Debrecen, Faculty of Humanities)) · **Kitti Kozma** (MTA-DE Future Awareness Development Research Group (University of Debrecen, Faculty of Humanities)) · **Ilona Dabney-Fekete** (MTA-DE Future Awareness Development Research Group (University of Debrecen, Faculty of Humanities))

resilience | Roma/Romani/Gypsy | educational inequalities

Ensuring equity for Roma students remains a critical concern across many countries (Brüggemann & Friedman, 2017; Council of Europe, 2024; FRA, 2023; Rutigliano, 2020). Roma teachers play an essential role in addressing this issue. Their life course experiences offer invaluable insights into the barriers faced by students from similar backgrounds (Fejős, 2018; Lampert et al., 2016; Reay, 2017; Sleeter, 2001). This study investigates the lives of Roma teachers who have demonstrated resilience, defined here as the capacity to succeed despite adverse circumstances (Luthar et al., 2000; Masten, 2025; Mu, 2024; Wosnitza et al., 2018; Zolkoski & Bullock, 2012). The study addresses two research questions: RQ1: What resources and obstacles characterized the life courses of Roma teachers on their way to obtaining a degree? RQ2: What markers does the legacy of the "resilient life course" leave in teachers' current educational practice, and do these experiences manifest themselves as obstacles or resources? Given the uniqueness of the target group, we employed snowball sampling. 16 semi-structured interviews were conducted in Hungary between 2019 and 2023. The interviews focused on both the participants' biographical experiences of resilience and their pedagogical work. Data were

analysed using thematic analysis following Brown and Clarke's guidelines (Braun & Clarke, 2006). Findings suggest that resilient Roma teachers actively draw on their life course experiences in their teaching practice. A strong sense of mission – shaped by the experience of succeeding against the odds – appears to sustain long-term professional engagement. The present study argues that overcoming hardship can serve as a vital resource in the teaching profession. The insights generated have implications for teacher education programs, particularly in preparing educators from underrepresented backgrounds. Furthermore, the findings inform education policy by highlighting the value of lived experience in fostering inclusive and equitable school environments. The research and analysis on which this paper is based has been implemented by the János Bolyai Research Scholarship of the Hungarian Academy of Sciences. The analysis was further supported by the MTA–DE Future Awareness Development Research Group (University of Debrecen, Faculty of Humanities) and with the support provided by the Research Programme for Public Education Development of the Hungarian Academy of Sciences.

CULTURALLY RESPONSIVE TEACHING FOR PROMOTING TRANSFORMATIVE AND DEMOCRATIC LEARNING IN HIGHER EDUCATION

Nicolina Bosco (University of Siena, Italy) · **Claudio Melacarne** (University of Siena, Italy)

learning culture democracy

Transformative theory (Mezirow, 2003) focuses on conditions that facilitate the ability to create transformations from learning, which is done through activating processes that reflect upon the premises through which we interpret everyday life events within the social and organizational world (Fabbri & Melacarne, 2023). The theoretical and methodological approach of transformative theory is applied to study and analyze how (micro-)radicalization episodes (Melacarne, 2025) may threat the democracy (Moghaddam, 2025) in several everyday educational contexts, such as universities. The increasing number of multicultural students in Higher Education may generate distance (Amiraux & Araya-Moreno, 2014) and the lack of contacts due to the potential structural racism (Brookfield, 2018; Sabic-El-Rayess, 2021), which may lay the ground for the emergence of micro-episodes of conflict in informal settings among minority and majority students. Considering this scenario, how can we support coexistence practices in highly complex multicultural contexts? How we may prepare students to be democratic professionals? How can we prevent (micro-)radicalization in universities? The Culturally Responsive Teaching (CRT, Bosco, 2025) helps us to analyze the impact of multiculturalism in teaching-learning process because facilitate cultural consciousness and critical analysis of beliefs and assumptions about self and others

(Gay, 2018) using culture connected to the material that needs to be learned. The literature on this topic highlights positive effects based on the application of CRT practices in universities, in particular the: i) development of personal and professional skills "multiculturally responsive" useful for reading and interpreting social events; ii) belonging to a relational system that involves peers, faculty, and students; iii) learning cross-cultural perspectives of meaning. The culture is the aim, the object, and the instrument that may be applied with students to raise their learning, which will be multidimensional (Fiorucci, 2020), transformative, emancipative, and democratic. This contribution aims to describe methodological strategies that enhance cultural dimensions in the teaching and learning process in order to deconstruct radicalized thinking in the university. The actions are been targeted to students in Bachelor's and Master's Degree Courses of Educational Sciences. In this context, we describe the implementation of photovoice focused on the thematization of intercultural dialogue. Students have been involved in the 1) elaboration of visual materials, 2) analysis of the factors that may (or may not) facilitate the intercultural contact; 3) analysis of future educational practices that may be applied to prevent daily (micro-)radicalization episodes and hate incidents in educational settings. Studying the CRT and its applications in Higher Education provides the foundations to understand and strongly support the importance of pluralism in the universities in order to promote an antiracist and democratic learning for future professionals.

TEACHERS WITH DISABILITIES BETWEEN DISCRIMINATION AND COUNTER-NARRATIVE: ACTIVISM PRACTICES AND THE REDEFINITION OF PROFESSIONAL IDENTITY

Francesca Sommaruga (Università degli Studi di Milano-Bicocca, Italy)

Teachers with disabilities | activism | intersectionality

Despite the growing heterogeneity of the teacher population, the experiences of teachers with disabilities remain marginalized in public debate and Italian research, often confined to exceptional or individualized narratives. The presence of teachers with disabilities tends to be portrayed as an extraordinary case or inspirational testimony, rather than as a structural and legitimate part of the profession. This project explores how teachers with disabilities make their experiences visible through interviews, public testimonies, editorial productions, and digital activism practices. These spaces of expression do not merely constitute moments of individual storytelling but function as practices of self-representation and identity advocacy, capable of challenging normative models and stereotypes related to the teaching profession. Their narratives highlight forms of discrimination and ableism that permeate the teaching profession, difficulties in access and job stabilization, cultural resistance from colleagues and families, and reduced or paternalistic expectations. By paying attention to intersectional dynamics, it becomes evident that disability intertwines with other identity dimensions, such as gender or migratory background, producing counter-narratives to the normative model of the "typical", able and white teacher. This study argues that these practices of visibility and self-representation constitute a central element for education aimed at democratic citizenship, capable of countering ableism. Making the plurality of teacher identities recognizable means interrogating the implicit hierarchies that regulate access to the profession, promoting inclusive and equitable educational environments that value difference as a pedagogical and social resource.

RACIALIZED TEACHERS AND EDUCATORS IN ITALY: BARRIERS, EXPERIENCES, AND IMPLICATIONS FOR INCLUSIVE EDUCATION

Mariagrazia Santagati (Università Cattolica del Sacro Cuore, Italy) · **Rahma Nur** (Indepent Researcher - Primary Teacher)

Racialized teachers | Migrant background educators | Educational inequality

The ethno-racial diversification of the teaching and educational workforce remains a largely unexplored issue in the Italian context. Existing studies highlight the scarcity of systematic research and reliable data on the presence and professional trajectories of educators with a migrant background in Italy. One reason for this gap is the still limited numerical relevance of the phenomenon. In the absence of comprehensive official statistics, data from AlmaLaurea (2024) indicate that 2.6% of graduates in Primary Education Sciences or Educational Sciences are foreign citizens, suggesting restricted access to both training pathways and employment in the educational sector. At the same time, ongoing demographic and educational transformations point to a likely increase in the number of educators with a migrant background. The growing presence of second-generation students in Italian universities suggests that the diversification of the educational workforce may expand in the coming years, potentially responding to the needs of school systems characterized by stable multiculturalism. In many European contexts, the presence of teachers of immigrant origin in the public education sector has been considered an important indicator of the openness and inclusiveness of receiving societies, as well as a potential resource for addressing educational inequalities. Within this framework, this contribution aims to develop a reflection informed by international literature and by the empirical evidence currently available. In particular, the paper focuses on two interconnected dimensions. First, it examines barriers and challenges affecting access to teacher education and professional careers among young people with migrant backgrounds, including institutional constraints, recognition of qualifications, and subtle processes of racialization within educational institutions. Second, it discusses the potential implications of teacher workforce diversification for students' learning outcomes and broader school experiences, especially for pupils from minority backgrounds. International research suggests that greater diversity among teachers can contribute to improved representation, positive role modeling, and culturally responsive pedagogies, although such effects depend on broader institutional conditions and cannot be assumed automatically. In addition, the paper presents preliminary findings from an exploratory mapping of racialized educators and teachers in Italy. The analysis combines data gathered through associative and professional networks with a documentary analysis of publicly available materials, including interviews, written testimonies, and digital content produced by educators with migrant backgrounds. This preliminary mapping aims to identify emerging professional trajectories, forms of collective organization, and narratives of belonging and exclusion that remain largely invisible within official data sources. By bringing together conceptual reflections and exploratory empirical evidence, the paper contributes to opening a research agenda on the diversification of the educational workforce in Italy and its potential implications for more inclusive and equitable schooling systems.

THE ROLE OF TEACHING STAFF IN FOSTERING INCLUSIVE, INTERCULTURAL EDUCATION: INSIGHTS ON THE IMPACT OF MIGRANT BACKGROUNDS

Benedetta Melloni (University of Modena and Reggio Emilia & Reggio Children Foundation, Italy)

interculturalism | school | inclusion

The growing cultural diversity within the school system raises important questions about the role of teaching staff in fostering inclusive and democratic education. With the increasing recognition of the importance of education for social cohesion, interculturalism has emerged as a key strategy to address diversity in educational contexts, specifically following the failure of multiculturalism (Barrett, 2013). Interculturalism has been adopted as an alternative framework that encourages the integration of diverse cultural perspectives in educational practices, whose need is particularly responding to the rise of hate speech and violence against migrant communities (Bayer & Bárd, 2020). At both the international and European levels, education is viewed as a central mechanism for promoting social and economic justice (UNESCO, 2023). Educational services represent an individual's first engagement with public life and citizenship practices (Rinaldi, 2021). The European debate also integrated education and democracy: education is essential for acquiring the attitudes, abilities, and knowledge required to coexist in a democratic society (Barrett, 2013). Despite the transformative potential of education, socio-economic factors remain a key determinant of academic success, and the achievement of "basic skills" (European Commission, 2025) is influenced by students' migrant or non-migrant backgrounds, contributing to disparities in school dropout rates (ECRI, 2024). The Italian context has seen increasing migration flows in recent decades (Azzolini et al., 2019) and has reached about 1.3 million minors with migrant backgrounds in 2025 (Organismo Nazionale di Coordinamento delle Politiche di Integrazione degli Stranieri, 2024). In response, ministerial guidelines have aimed to integrate migrant students while valuing their cultural diversity (Wallace et al., 2021). However, students with migrant backgrounds generally tend to pursue technical or professional educational pathways instead of university-oriented ones (Santagati & Bertozzi, 2023). This behavior leads to the transfer of socioeconomic disadvantage between generations and the decrease in social mobility (European Commission, 2022). It also has consequences on the labor market and can contribute to explaining the acknowledged disparity between growing school diversity and teaching staff homogeneity (Santagati & Nur, 2025), as this mismatch can lead to underrepresentation of diverse perspectives in educational settings and limit opportunities for migrant-background students in the workforce. Drawing from a multiple-case study that compares educational school and extracurricular activities in primary schools in Italy and France, this abstract examines how intercultural approaches can promote social cohesion by analyzing political frameworks, everyday practices, and the experiences of families. One interview from this study revealed that an educator's migration background and religious beliefs fostered dialogue and built understanding and trust with the institution. This example highlights the connection between the personal identities of teaching staff and their ability to foster inclusive education.

ACADEMIC PATHWAYS AND THE TEACHING PROFESSION FOR YOUNG PEOPLE FROM INTERNATIONAL BACKGROUNDS

Rita Bertozzi (Università di Modena e Reggio Emilia, Italy) · **Basma Aissa** (CONNGI)

Pre-service teachers | International background | In-service teachers

Access to tertiary education programmes leading to a teaching qualification in Italy is very limited for young people of international origin and from minority groups. The limited data available indicates that around 1% of foreign nationals hold a degree in Primary Education (Almalaurea 2023), but the academic pathways remain largely unexplored. In fact, not all sectors of the education professions are inaccessible to these young people – for example, the profession of social-pedagogical educator – and it remains to be seen to what extent entry into the education sector occurs through other professional channels, whilst still maintaining a distinction in roles and prestige, and with what implications. Certainly, the scarcity of young people of international origin within the Italian teaching profession is an issue that requires analysis, particularly in light of possible reasons linked to legal and institutional constraints, socio-relational factors, as well as direct or indirect discriminatory dynamics. This paper aims to investigate the barriers that make it more difficult to access teacher training programmes and enter the teaching profession and, secondly, to explore the factors that can contribute to successful pathways into teaching. To this end, this study begins by analysing trends in the number of students of international origin enrolled on teacher training programmes, using an Italian university as a case study. Using data extracted from the university's longitudinal database (covering the academic careers of students enrolled from 2000 to the present day and the various outcomes of their academic journey before, during and after university, broken down by immigrant background), it will highlight whether and to what extent the trend in enrolment of students with an international background on degree programmes in Primary Education and Educational Sciences has changed over the years, and what this implies regarding the attractiveness of this profession for younger generations with an immigrant background. The paper then presents the findings of an exploratory study conducted among young people of international origin working in schools, based on a nationwide questionnaire. The survey examines: how young people of international origin with teaching experience in Italy gained access to the teaching profession; what challenges they faced; what resistance or discrimination they encountered; and which aspects of their identity they were able or had to bring into play. Finally, the article offers a reflection on the ability of school settings to make the most of these teachers' skills, both in day-to-day school routines and in the context of citizenship education, drawing comparisons between a number of significant cases.

FROM MALE SHORTAGE TO TEACHER DIVERSITY: AN OPPORTUNITY TO CHALLENGE THE MAINSTREAM CURRICULUM IN EDUCATION?

Greta Persico (Università degli Studi di Milano Bicocca, Italy)

minority teachers | critical studies on masculinities | pedagogical strategies

The aim of this essay is to address the so-called male shortage in early education and teaching professions, through an interdisciplinary frame. Creating inclusive schools, as well as gender mainstreaming, are at the forefront of the EU policy (European Commission, 2020) and are key targets for European policymakers for the upcoming years. In this article I will

explore the overlap of these two EU priorities, focusing on theinvolvement of men in early childhood care and teaching professions - as the target that was set more than 20 years ago has still not been reached. Critical studies on masculinities and literature on role models in schools are here in dialogue with pedagogical perspectives on hidden curriculum studies and inclusive education theory. Most studies concerning the male shortage in education (Davis and Hay, 2018) focus on one or two dimensions, e.g. male educators in early care, black male teachers (Woodson and Bristol, 2020), male teachers with disabilities (Neca, Borges and Campos, 2020) or LGBTQI+ teachers (Lee, 2020). Hegemonial discourses are thus compartmentalised based on individual characteristics and the according single categories. Our hypothesis is that In order to challenge schools as mainstream and hegemonic discourse reproducers, it would be more effective to broaden the analysis and to consider all of these dimensions as different facets of a complex phenomenon.There is also an urgent need, I would like to stress, to move from a personal and biographical perspective –the individual teacher –to a social perspective –the team, the class, and beyond that, to an institutional perspective –the school as a democratic institution. The contribution describes a theoretical framework and preliminary results of a research proposal aimed at investigate whether a more diverse teaching staff may increase inclusion in education, understood as the never-ending commitment to developing better ways of responding to diversity. Although international literature is quite attentive to minority teachers, the Italian scenario does not look so rich of theory or empirical study. While reframing the male shortage definition in an intersectional framework, including gender identity and performance perspective, but also considering ethnicity, (dis)ability, religious back ground, I intend to investigate if a diverse teaching staff may challenge the mainstream curricula and increases the level of inclusiveness of schools in a diverse society.

Reimagining the Teaching Profession: Well-being, Identity and Community in Transforming Educational Fields

PANEL CONVENORS: Marco Pitzalis (Università di Cagliari, Italy); Hanne Mäki-Hakola (Tampereen Ammattikorkeakoulu Oy – Finland); Lia Pappámikail (Instituto Politécnico Santander – Portugal); Filippo Pirone (Université Paris Xii Val de Marne, – France)

PANEL KEYWORDS: Teachers' well-being, Professional identity, Communities of practice

This panel draws inspiration from the research and collaborative experience developed within the Erasmus+ project "Connecting Teachers – A Community of Practice to Promote Teachers' Well-being" (2025–2028). The project has created a unique space for comparative reflection and experimentation on teachers' well-being, identity, and professional development across different European contexts, during a time of widespread teacher shortages and burnout (OECD, 2025; UNESCO, 2024). Building on this background, the panel examines how the teaching profession is being redefined in the face of accelerated social, digital, and institutional transformations. Teachers today inhabit a field marked by intensifying accountability, emotional demands, and structural uncertainty, yet also by new opportunities for collective reflection and professional community-building. From a sociological and comparative perspective, the contributions will discuss how institutional conditions, symbolic representations, and everyday practices shape teachers' professional identities and well-being. The discussion reframes well-being not as a psychological or individual matter but as a relational and institutional phenomenon, co-produced within organisational cultures and communities of practice. Finally, the panel invites reflection on how higher education and teacher training can foster the capacity for critical reflexivity, cooperation, and sustainable professional engagement, renewing the social and cultural foundations of teaching in Europe.

TEACHERS' PROFESSIONAL WELLBEING IN ITALY: A CRITICAL LITERATURE REVIEW AND POLICY PROPOSALS

Emanuela Spano' (University of Cagliari, Italy) · **Marco Pitzalis** (University of Cagliari, Italy) · **Gabriele Pinna** (University of Cagliari, Italy)

teaching profession | critical literature review | occupational health and professional wellbeing

This paper offers a critical analysis of the Italian academic literature on the teaching profession. After outlining the main findings and the most established research strands within the international scholarship, it highlights the specific features of the Italian debate. The contribution is based on a multidisciplinary review of education research—spanning pedagogy, sociology, psychology, and anthropology—drawing on articles published in leading specialist journals and major volumes over the past few decades. The review identifies three broad research axes: (a) teacher education and professional competences; (b) professional identities and expertise; and (c) the structural characteristics of the profession and career trajectories. The Italian system is marked by delayed entry into the profession and prolonged contractual precariousness, with negative repercussions for professional stability and motivation. Professional induction remains weakly institutionalised, continuing professional development is unevenly structured, and evaluation processes are increasingly shaped by accountability-oriented logics. These dynamics contribute to the profession's declining attractiveness, further exacerbated by occupational stress and burnout, and point to the need for systemic reforms grounded in robust empirical evidence. The paper concludes with a set of policy proposals to enhance teachers' professional well-being.

STRENGTHENING PROFESSIONAL IDENTITY AND WELL BEING IN PROFESSIONAL TEACHER EDUCATION: INSIGHTS FROM FINLAND

Hanne Mäki-Hakola (Tampere University of Applied Sciences, Finland) · **Nina Smolander** (Tampere University of Applied Sciences, Finland)

professional teacher education | teacher well-being | professional identity

Across Europe, teacher shortages, intensifying accountability regimes, and rapid socio-digital transformation are reshaping the conditions of teaching. These developments have raised growing concerns about teachers' professional well-being and the sustainability of teaching careers (OECD, 2025; UNESCO, 2024). Recent research suggests that teachers' well-being is strongly influenced by organisational conditions, professional autonomy, and opportunities for collegial support rather than by individual factors alone (Lähteenmäki et al., 2025). In this context, professional teacher education institutions play a crucial role in supporting the development of resilient professional identities and collaborative professional cultures. This paper discusses the Finnish contribution to the Erasmus+ project Connecting Teachers – A Community of Practice to Promote Teachers' Well-being (2025–2028), focusing particularly on vocational and professional teacher education in universities of applied sciences. The Finnish teacher education system provides a distinctive context for examining the relationship between professional identity, institutional structures, and well-being. Vocational

teachers typically enter the profession with strong occupational backgrounds and subsequently complete pedagogical teacher education (60 ECTS), which aims to develop pedagogical competence, guidance skills, and reflective professional practice (Jyrhämä, 2021). However, contemporary transformations in vocational education, including competence-based curricula, personalised learning pathways, and stronger integration with workplaces, have expanded and diversified teachers' roles. VET teachers increasingly act as facilitators of learning, mentors, network collaborators, and developers of learning environments. These expanding expectations can create tensions in teachers' professional identity formation and affect their well-being. Studies on vocational teachers highlight that professional identity is often negotiated between prior occupational expertise and emerging pedagogical expertise (Tapani & Salonen, 2019; Antera & Teräs, 2024). At the same time, organisational support and collaborative professional environments have been shown to play a significant role in sustaining teachers' job satisfaction and well-being (Chen, 2026). Drawing on these perspectives, the paper analyses how Finnish professional teacher education programmes seek to support sustainable professional identity development and teacher well-being through collaborative learning and communities of practice. Participation in professional communities can provide spaces for collective reflection, mutual recognition, and the integration of professional knowledge into shared practices (Wenger, 1998). Research in vocational education also indicates that collaborative practices and peer learning can strengthen teachers' capacity to adapt to educational change and enhance professional agency (Sirk, 2024). From a sociological perspective, well-being is therefore understood not as an individual psychological attribute but as a relational and institutional phenomenon that emerges within organisational cultures and professional communities. Finnish professional teacher education programmes increasingly emphasise reflective practice, peer learning, and collaborative development work with VET educational institutes. These pedagogical approaches aim to strengthen professional teachers' sense of belonging, professional agency, and capacity to engage sustainably with the complex demands of contemporary education. The paper contributes to the panel's comparative discussion by examining how teacher education institutions can foster communities of practice that support both professional identity formation and teacher well-being. The Finnish case suggests that embedding collaborative professional learning within teacher education can help renew the social and cultural foundations of teaching in rapidly transforming educational fields.

TEACHER PROFESSIONALISM IN ITALIAN SECONDARY SCHOOLS: BETWEEN TEACHER EDUCATION POLICIES AND TRANSFORMATIONS OF SCHOOL WORK

Noemi Palladino (Sapienza, Università di Roma, Italy)

Teacher professionalism | Teacher education policies | Teacher professional competences

Several studies have highlighted the central role of teachers in students' learning processes and their contribution to educational outcomes, as well as their long-term impact on different life outcomes, such as the attainment of higher educational qualifications and higher levels of income (Chetty, Friedman & Rockoff, 2014; Hanushek, 2011; Rockoff, 2004). These findings have strengthened the attention devoted to the quality of teaching and to the development of teachers' professional competences, also in relation to the role that effective teachers can play in reducing educational inequalities among students (Argentin, 2018). At the same time, the concept of teacher effectiveness does not have a single, universally accepted definition, as it is linked to different indicators and dimensions of teachers' work. Moreover, the literature on teacher professionalism highlights the complex nature of teaching, which requires the integration of

disciplinary, pedagogical, relational and organizational competences, together with a continuous commitment to professional development (Hargreaves & Fullan, 2012; Ianes et al., 2019). In addition, several studies show that in order to fully exercise their professional role, teachers need adequate personal and professional resources. These resources, together with the support perceived within the school context, are also associated with teachers' professional well-being (Fiorilli et al., 2019; Skaalvik & Skaalvik, 2017). From this perspective, education and teacher training policies can represent an important context through which to support teachers' professional development and the resources necessary to carry out educational work. In the Italian context, the regulatory framework concerning teacher education has undergone several reforms in recent decades, from the Scuole di Specializzazione all'Insegnamento Secondario (SSIS) to the Tirocinio Formativo Attivo (TFA), and more recently to the new university-based qualification pathways. These reforms have progressively redefined access to the teaching profession, the professional image of teachers and the competences expected from them. Starting from these premises, the aim of this contribution is to analyse the transformations of teacher professionalism in Italian secondary schools by connecting teacher education policies, professional competences and the conditions under which teachers exercise their profession. The paper proposes a desk analysis of the main regulatory frameworks that have governed teacher education in Italian secondary schools, combined with a review of the scientific literature and an analysis of secondary sources and data related to teachers' professional conditions.

GUIDING TEACHERS: PROFESSIONAL REFLEXIVITY TO SUPPORT STUDENTS

Miriam Bassi (University of Foggia, Italy)

professional reflexivity | career guidance | teachers training

The contribution aims to position at the crossroads of issues concerning adult education and the pedagogy of work and organizations, from both an epistemological and methodological perspective. The rationale lies in the interest in the initial, and above all, continuous training of teachers who, as adults, require an approach oriented toward the interpretation of experiences and, consequently, the systems of meaning (Mezirow, 2003) of which they are carriers. Furthermore, this work intersects with the specificities of pedagogical research within organizational contexts by considering teachers as an integral part of the school environment; understood as a workplace, this setting can become a place for either the enhancement or depletion of learning processes (Alessandrini, 2004) and professional reflexivity. The focus on teachers' professional reflexivity is observable internationally in reports highlighting the importance of promoting reflective thinking and well-being in both initial and continuing teacher education (OECD, 2025) to re-imagine education as a common goal (UNESCO, 2024). Within the Italian regulatory landscape, the guidelines for initial teacher training (DPCM, 2023) call for learning outcomes in terms of teachers' reflective and self-evaluative competencies, both in purely disciplinary fields and in the digital facilitation of students' learning processes. Reflective thinking as a driver for inquiry that liberates one from routine and impulsive action is a crucial theme in Dewey's work, in which three key values of incorporating such thinking as an educational aim can be identified. In line with this perspective, Schön (2010) proposes an inquiry trajectory that centers on the cognitive activity engaging professionals – within the relationship between action and thought, starting from and in view of action (Baldacci et al., 2023) – and seeks a new epistemology of professions, challenging the concept of technical rationality. Reflection on one's own experiences plays a crucial role in activating career guidance practices, as the reflective act regarding one's life experiences can be configured as a moment in which one allows oneself to distance experiences from the self. This improves focus and, consequently, introduces "a level of self-awareness that increases the

intensity of feeling" (Mortari, 2019, p. 129), capable of "awakening the awareness of the fragility of one's own being" (p. 150). Based on these considerations, it is possible to identify the teacher's task of promoting the habitus of reflection by becoming an "intentional guide", endowed with an ethical responsibility "in pursuing one of the primary tasks of the democratic school: to offer all students the tools and opportunities to position themselves, as adults and citizens, in a complex world" (Formenti et al., 2017, p. 76). This task resonates as a renewal of Morin's warning: "the reflective attitude of the human mind, which enables it to consider itself by doubling itself, should be encouraged and stimulated in everyone" (Morin, 2000, p. 52).

IMAGINING THE FUTURE SCHOOL: PRE-SERVICE TEACHERS' NARRATIVES ON PROFESSIONAL ROLE AND IDENTITY

Lia Pappámikail (Santarém Polytechnic University, School of Education, CIEQV, Portugal) · **Susana Batista** (NOVA FCSH; CICS.NOVA) · **Cláudia Urbano** (NOVA FCSH; CICS.NOVA) · **Ana Kubrusly** (NOVA FCSH; Escola Superior de Educação do Instituto Politécnico de Setúbal (IPS); CICS.NOVA) · **Lídia Marôpo** (Escola Superior de Educação do Instituto Politécnico de Setúbal (IPS); CICS.NOVA)

teacher identity | future imaginaries | pre-service teachers

Debates about the futures of education have intensified in recent years, driven by accelerating social, institutional, and cultural transformations (Nóvoa & Alvim, 2020), particularly the expansion of digital technologies, raising fundamental questions about the role of teachers. Among these, none is more unsettling than the possibility that teachers may be replaced, or rendered peripheral, in increasingly technology-mediated educational environments. The concept of school form, understood as a specific mode of socialisation, places the teacher at its very centre. As Vincent, Lahire and Thin (2001) argue, the scholastic mode of socialisation is defined by an unprecedented social relationship between a 'master' and a 'pupil': a pedagogical relationship. Similarly, the grammar of schooling, as described by Tyack and Tobin (1994), has long organised pedagogical life around the centrality of the teacher instructing students. Yet the school form should not be read as rigid or immutable, as it can adapt and change without undermining its overall coherence. In this context of technological transformation and institutional continuity, the perspectives of those preparing to enter the profession become particularly relevant. How do pre-service teachers navigate these anxieties, and what kind of professionals do they aspire to become? More specifically, how do they imagine their professional role in the school of the future? To what extent do their narratives reproduce or challenge inherited conceptions of the teacher? And what do these imaginaries, shaped by both aspirations and fears, reveal about emerging professional identities? Drawing on Biesta's (2020) notion of teaching as a professional art, and on research on how student teachers construct professional identity (Beauchamp & Thomas, 2010), we examine the potential of future teachers to reimagine their role, attending to the values, relational orientations, and anxieties they project onto the future school. Empirically, this communication draws on data from a pedagogical experiment in two master's-level teacher education courses in the area of social sciences and humanities in Portugal, involving 70 students, with two stages. In the first stage, students produced a reflective text imagining school life and their daily work as teachers in 2050. In the second stage, they generated AI images representing the school of the

future. The analysis focuses on the self-positionings that emerge from these narratives. How do pre-service teachers locate themselves within future educational scenarios? Do they position themselves as central or peripheral in the school and classroom? Which words and metaphors do they associate with teaching? How do they envision their relationships with other professionals and educational actors? Does technology appear in their imaginaries as a support for their practice or as a threat to their relevance? Through this lens, we explore whether future teachers see themselves as agents of transformation, as relational and humanising presences irreplaceable by any technological substitute, or, conversely, as potentially dispensable figures in an increasingly automated educational landscape. The findings contribute to discussions on teacher professional identity and well-being, shedding light on how future teachers imagine and position themselves within a profession whose role, while historically central to the school form, is today being questioned.

A PROFESSION UNDER STRAIN: SHORT-TERM POLICY FIXES AND LONG-TERM PLANNING GAPS IN PORTUGAL'S TEACHER WORKFORCE

Lia Pappámikail (Santarém Polytechnic University, School of Education, CIEQV, Portugal) · **David Beirante** (Santarém Polytechnic University, School of Education, CIEQV, Portugal) · **Helena Luis** (Santarém Polytechnic University, School of Education, CIEQV, Portugal) · **Marisa Correia** (Santarém Polytechnic University, School of Education, CIEQV, Portugal)

Teachers | educational policies | workforce governance

This paper analyses teacher education, recruitment and retention policies in Portugal through a sociological lens that treats "shortage" not only as a technical mismatch between supply and demand but as a policy problem constructed through specific frames, instruments and temporalities. Building on national diagnosis of an ageing workforce and projected retirement pressures, we argue that policy responses have tended to be organized around short-horizon measures, designed to stabilize staffing in the present—rather than around integrated, prospective workforce planning that aligns initial teacher education capacity, induction, career structures and working conditions (Conselho Nacional de Educação [CNE], 2024). We conceptualize this pattern as a technocratic policy orientation in the sense of governing through instruments. It privileges managerial levers, quantification and rapid regulatory adjustments that render the profession "manageable" while leaving less visible the relational, institutional and political conditions that shape professional commitment and career continuity. International evidence on teacher shortages and retention stresses that sustainable solutions require system-wide strategies centred on professional support, decent working conditions and coherent career governance, reinforcing the limits of reactive approaches (Organisation for Economic Co-operation and Development [OECD], 2025; UNESCO, 2024). Methodologically, the paper undertakes qualitative analysis of official reports and policy documents to trace how teacher supply is narrated, which instruments are prioritized, and what assumptions about professionalism and responsibility underpin policy choices. By linking policy temporality (short-term responsiveness versus long-term planning) with policy rationality (technocratic instrumentality versus professional and democratic governance), results reveal that "quick fixes" may contribute to cyclical instability and transfer responsibility to schools and teachers, undermining retention. We conclude by arguing for the need for a more prospective democratic governance architecture where education, recruitment, retention and wellbeing are treated as structurally interconnected dimensions of professional sustainability.

THE REFLECTIVE COMMUNITY: REIMAGINING TEACHER IDENTITY AND WELL-BEING THROUGH COLLECTIVE CRITICAL REFLEXIVITY IN EUROPEAN EDUCATIONAL FIELDS

Alexandra Covaci (University of Salento, Italy; University of Glasgow)

Teacher Well-being | Professional Identity | Critical Reflexivity

As the teaching profession faces unprecedented challenges—ranging from systemic shortages to the digital transformation of the classroom—this panel contribution argues that the crisis of teacher well-being cannot be resolved through individual psychological interventions. Instead, drawing on the collaborative framework of the Erasmus+ "Connecting Teachers" project (2025–2028), we propose that well-being and professional identity must be reimagined as relational constructs embedded within institutional cultures. The discussion centers on the necessity of moving beyond the "technical-rationality" model of teaching, which reduces the profession to the implementation of pre-defined protocols and accountability metrics. Following Schön (1983), we advocate for the recovery of the "Reflective Practitioner." In this view, professional identity is not a static set of credentials but a dynamic process of "reflection-in-action." By embracing the uncertainty of the "swampy lowlands" of practice, teachers can reclaim their role as autonomous professionals capable of navigating the emotional and structural complexities of modern schools. However, to ensure that reflection does not lead to self-blame or isolation, this contribution emphasizes the role of the community. Using Brookfield's (2017) framework for "becoming a critically reflective teacher," we explore how the development of Communities of Practice (CoP) allows for a collective interrogation of the profession. By viewing their work through the "four lenses"—autobiography, students' eyes, colleagues' perceptions, and theoretical literature—teachers can identify and challenge the hegemonic assumptions that lead to burnout and alienation. This contribution invites a comparative reflection on how European higher education and teacher training programs can foster these "spaces of encounter." The goal is to move from a culture of performance to a culture of shared inquiry. By reframing well-being as a byproduct of collective agency and critical reflexivity, we can renew the social foundations of the teaching profession, positioning schools not just as sites of instruction, but as resilient communities of practice that sustain the democratic identity of the educator.

RECONFIGURATIONS OF THE TEACHING VOCATION: ENGAGEMENT, WELL-BEING AND PROFESSIONAL REGIMES FROM THE PERSPECTIVE OF SCHOOL LEADERSHIP

David Beirante (Instituto Politécnico de Santarém, Portugal; Centro Interdisciplinar de Ciências Sociais da UNL, Portugal) · **Pedro Caetano** (Centro Interdisciplinar de Ciências Sociais da UNL, Portugal) · **Ana Neves** (Centro Interdisciplinar de Ciências Sociais da UNL, Portugal) · **Francisco Ferreira** (Centro Interdisciplinar de Ciências Sociais da UNL, Portugal; Universidade de Lisboa Faculdade de Letras, Portugal)

teaching vocation | teacher well-being | professional identity

Within a European context marked by teacher shortages and the intensification of professional burnout (OECD, 2023; UNESCO, 2024), this exploratory study draws on pragmatic sociology (Boltanski & Thévenot, 2006; Thévenot, 2006). Its analysis interprets the findings as expressions of different modes of teachers' engagement with their professional activity and with the institutional frameworks that regulate it. The most consistent form of engagement remains anchored in the concrete pedagogical relationship, in everyday cooperation, and in care for students— a commitment sustained by situated practices and ethical responsibility. However, this core is traversed by institutional dynamics shaped by performance metrics, accountability mechanisms, and bureaucratic intensification, which tend to misalign the pedagogical meaning of

the profession from formal criteria of recognition. This paper presents the results of an initial questionnaire developed within the framework of the DRAFTER project – Building Teachers' Vocation for the 21st Century. The study is based on a survey administered to principals of School Clusters (Agrupamentos de Escolas) and Non-Clustered Schools in the Lisbon Metropolitan Area, seeking to analyse school leaders' perceptions of teachers' professional engagement, well-being, and the conditions for valuing the profession. The analysis, combining quantitative and qualitative data, enables the construction of an integrated reading of school leaders' perceptions of teaching. The findings indicate high levels of collaboration among teachers, low levels of professional isolation, and a consistent openness to addressing students' difficulties. At the same time, they reveal frequent references to accumulated fatigue, bureaucratic pressure, salary dissatisfaction, and the symbolic weakening of teachers' authority. Open-ended responses converge in identifying priorities such as salary enhancement, improved working conditions, and strengthened social recognition of the profession. Taken together, these elements do not point to a generalized erosion of vocation, but rather to a reconfiguration of professional engagement within institutional contexts marked by increasing demands and insufficient recognition. In sum, teacher well-being emerges as a relational and organisational phenomenon, produced in everyday interactions and professional cultures rather than as a merely individual variable. Within the context analysed, teaching appears as a vocation under strain yet not annulled: commitment to students and to the professional collective remains active, although conditioned by structures that challenge the sustainability of engagement and call for renewed forms of institutional and public recognition.

THIS IS THE SERIOUS WORK: TEACHER JOY IN CULTURALLY AND LINGUISTICALLY DIVERSE TEACHING AND LEARNING ENVIRONMENTS

Kathy Whynot (University of New Brunswick, Canada)

professional identity | teachers' well-being | teacher joy

Over the past five years in Canada, and globally, the teacher's role in education—long recognized as crucial—has grown more complex. Rapid technological change, a global pandemic, and recruitment and retention difficulties have resulted in an increasingly stressed workforce (Awde, 2024). At the same time, unprecedented global migration (UNHCR, 2025) has reshaped classrooms, creating newly culturally and linguistically diverse (CLD) learning environments that require teachers to navigate complex identity and belonging dynamics. In New Brunswick (NB), a province located in Atlantic Canada, for example, in 2017, students came from 40 countries; by 2024, they represented 150 countries, and the overall student population had increased by 20% (GNB, 2025). What have teachers experienced in this rapidly evolving context? Little is known about how teachers' identities develop in newly CLD environments and how well-being and practice might be affected (Gregersen et al., 2020). Growing cultural and linguistic diversity has been identified as a key challenge (Aydin, 2023; Yildirim, 2019), yet the literature on teachers' experiences in CLD environments reveals variation in beliefs, experiences, and recommendations. Strain and tension, often connected to low self-efficacy and/or deep value misalignment (for example, see: Acheson et al., 2016; Babaii et al., 2020; Nazari et al., 2022; Peterson & Jenson, 2025), can lead to disillusionment, burnout, or leaving the profession (Ben-Said, 2014). Recent literature, however, has shown that this tension can also stoke agentive action for change (Betancurt & Gallego, 2025; Tekin, 2024; Truong et al., 2025; Yuan & Burns, 2017). Recognizing that a research and narrative focus on damage in complex systems has not amounted to change (Tuck, 2009), it is evident that teachers must consider how to remain aligned with their values as a form of resistance and sustenance in an increasingly complex role. In this presentation, I argue that the phenomenon of teacher joy, which I conceptualize as deep and positive alignment with self and personal praxis, is a potential way through and beyond stressed systems. Joy - agentic, relational, collective, and politically situated (Ahmed, 2017; Emmons, 2020; Muhammad, 2023) - is often expressed through culture and language, making it deeply important in CLD environments as a democratic force that embraces diversity, fights assimilation, and inspires change. To discuss this phenomena of teacher joy, I draw on a critical literature review, a theoretical framework grounded in Black, feminist and Indigenous theories of

knowledge that reject pathologizing narratives and embrace complexity (Belcourt, 2020; hooks, 2001; Lorde, 2007), and a sociocultural consciousness that believes that humanizing pedagogical practices like translanguaging open space for identities to flourish (Koyama & Kasper, 2022; Nieto, 2013). I also draw on reflexive commentary emerging from my experiences as a first-generation high school graduate-turned-teacher, teacher leader, and teacher educator in a rapidly diversifying rural Canadian province to discuss the rationale and methodology for my upcoming research on teacher joy in newly CLD learning environments. The pedagogy of joy I describe is grounded in feminist resistance, collective reflexivity, and communities of practice.

VOCATION AND EMANCIPATION. THE PLACE OF WORK AND TEACHING IN STUDENTS' UTOPIAN ASPIRATIONS.

Baptiste Legros (Université Paris Est Créteil, France)

utopia vocation teacher identity

This contribution presents an ongoing study on students' utopias, conducted as part of a postdoctoral research project at the Université Paris-Est Créteil (UPEC) under the supervision of Séverine Chauvel. It engages with this panel's central questions by approaching professional teacher identity not from the perspective of practitioners already in the field, but from that of students whose social imaginaries sketch, in negative, a redefinition of the symbolic and relational foundations of the teaching profession. The study seeks to understand how utopian imaginaries are grounded in ordinary experience, placing actors in situations of incongruence between their ideals and their practices (Mannheim, 2006). Conducted with students at UPEC — 25 interviews completed out of a target of 50 — enrolled in social science programmes preparing for careers in local government, community education, and teaching, it draws on the photo-elicitation method (Bigando, 2013; Michelin, 1998). Photography plays a central methodological role: it ensures grounding in participants' everyday lives by inviting them to capture and objectify what they perceive daily without always putting it into words (Bajard & El Miri, 2024). Participants are asked to take a series of photographs documenting an everyday situation — an object, a landscape, an interaction — that provokes, to them, either attraction or repulsion. These photographic acts allow them to identify situations that are often "seen but unnoticed." This grounding work then leads to an elicitation interview, during which participants explain the reasons behind their photographic choices and articulate, from their individual and sensory experiences, as-yet-unrealised social aspirations. Photography anchors lived experience; the interview reveals its meaning by making visible the forms of social imagination that underlie it. Unlike strategic projections on plausible professional futures — shaped by parental expectations and competencies (Duru-Bellat, 2024) — students' imaginaires here go beyond instrumental rationality and career strategies. Yet, these imaginaries remain predominantly positive, echoing findings from youth studies which show that young people tend to maintain a strong sense of optimism about their personal futures, grounded in perceptions of resources, agency and individual responsibility (Keating & Melis, 2021). In this sense, students' utopian aspirations resonate with liberal and neoliberal valorizations of individual agency and self-realisation (Visanich, 2020). At the same time, they articulate an internal critique of this model, particularly with regard to the role that teaching should play in supporting collective emancipation rather than merely individual success. It is precisely within this critique that emerges a reimagined conception of teaching. Teaching thus occupies a singular place in these imaginaires. Students project onto it a vision of the teacher grounded not in statutory authority, but in relational authority (Aspelin, 2023), sustained by the capacity to foster critical reflexivity and to accompany students' emancipation.

Research-based Teacher Professional Development as a Model of Professional Reflection for Teachers and Researchers

PANEL CONVENORS: Guido Benvenuto (Sapienza University, Italy); Gabriella Agrusti (Lumsa University, Italy)

PANEL KEYWORDS: Research-based Professional Development, In-service teacher training, Teacher change

The Research-based Teacher Professional Development (R-TPD) framework, developed by the Interuniversity Educational Research Centre on Teacher Professional Development (CRESPI) (Asquini, 2018), promotes collaboration between researchers and educational stakeholders. Its aim is to produce scientifically robust knowledge while ensuring the sustainability of implemented actions. This approach has been applied in several intervention projects, including recent CRESPI PRIN2022 initiatives, to highlight a political–methodological model grounded in a transformative and reflexive paradigm (Dodman et al., 2025) and oriented towards the emancipation of educational practices. At the core of R-TPD is collaborative inquiry between teachers and researchers, conceived as an interdisciplinary process integrating diverse theoretical and epistemological perspectives while keeping teacher reflexivity central. Each project is structured around five principles that define R-TPD as a distinctive methodological approach and function as commitments and open questions: Clear focus – explicit definition of research aims related to teacher learning and professional growth, with systematic analysis of change. Co-construction – creation of an R-TPD group with clarified roles and negotiated goals, values, and methodological choices. Context-specificity – attention to institutional and non-institutional conditions shaping each context, through ongoing analysis of constraints and resources. Documentation-based practice – continuous discussion of collected documentation on processes and outcomes in school and professional development settings. Impact-orientation – monitoring the effects of R-TPD on school practices, educational innovation, and teacher development. The Panel presents main results from this research tradition and illustrates selected projects using the R-TPD model, encouraging reflection on its strengths, limitations, theoretical implications, and contribution to developing school professionalism.

CO-DESIGNING STEAM ACTIVITIES: A PARTICIPATORY FRAMEWORK FOR TEACHERS' PROFESSIONAL DEVELOPMENT THROUGH ACTION RESEARCH AND MAKER CULTURE

Federica Selleri (FabLab Valsamoggia APS, Università di Foggia, Italy)

Co-design | Action research | Maker culture

Background and objectives Despite various initiatives aimed at promoting digital technology integration in Italian schools over recent years, a significant gap persists between the availability of tools and their effective integration into curricular teaching. While teachers demonstrate theoretical knowledge of STEAM approaches, practical implementation remains limited. This study presents the development and experimentation of a co-created design protocol with teachers to facilitate the planning of hands-on STEAM activities in primary and lower secondary schools. Theoretical-methodological framework The research integrates three complementary paradigms: Design-Based Research (McKenney & Reeves, 2019), participatory co-design (Sanders & Stappers, 2008), and action research (Carr & Kemmis, 1986). This approach repositions teachers from implementers to "Teachers as Designers" (Brennan, 2015), valorizing professional competencies through the creation of a community of practice (Wenger, 1998). The theoretical framework is rooted in social constructivism (Vygotsky, 1978) and "learning by making" (Papert, 1980), connecting the maker culture ecosystem and FabLab pedagogical models (Blikstein, 2013; Halverson & Sheridan, 2014) to formal schooling contexts. Research structure The two-year project was articulated in four iterative phases: (1) Context analysis and identification of primary stakeholders through a questionnaire validated on constructs of readiness and self-efficacy; (2) Co-design of the protocol through online meetings with teacher stakeholders, using collaborative platforms to define shared parameters related to objectives, competencies, and tools; (3) Classroom experimentation of the protocol in primary school classes with participant observation by the researcher; (4) Analysis through teacher logbooks and post-experience questionnaire. Main findings The co-created protocol functioned as an enabling constraint, providing a flexible structure adaptable to specific contexts. Analysis of teacher logbooks revealed the emergence of hidden competencies among teachers (problem-solving management, cooperative group coordination) not initially recognized as "technological" competencies but essential for STEAM activities. The collaborative dimension of the process was identified as an "intellectual partnership" that transformed professional isolation into a shared resource. The protocol supported the transition from descriptive reflection to critical and transformative reflection (Schön, 1983; Elliott, 1991). The main barriers identified remain

systemic in nature (management of school time) rather than related to individual competencies. Implications for teacher education The study demonstrates that effective training does not eliminate difficulties but changes their nature: from "not knowing what to do" (pedagogical block) to "not having functional tools" (logistical block). The co-design process is configured as a scalable model of professional development that overcomes traditional vertical training, creating spaces of design freedom where teachers become active co-researchers. The experience suggests the need to establish some permanent educational fablabs as methodological hubs external to consolidated school dynamics, to support interdisciplinary communities of practice. The research contributes to the field of teacher professional development by demonstrating how participatory design methodologies can effectively bridge the gap between theoretical knowledge and practical implementation of STEAM education. By positioning teachers as designers rather than mere consumers of educational innovation, the study offers a replicable model for sustainable integration of technology-enhanced learning in formal education contexts. The iterative nature of the research allowed for continuous refinement of the protocol based on authentic classroom experiences, ensuring ecological validity and practical applicability.

GRADUATE TEACHING ASSISTANTS IN THE THIRD DIMENSION: IDENTITY AND CAREER CONTINUATION

Kristyna Campbell (King's College London, United Kingdom) · **Kaiyun Feng** (King's College London, United Kingdom)

Third-space | Graduate Teaching Assistants | Professional Development

Across UK higher education, Graduate Teaching Assistants (GTAs) are increasingly being relied upon to carry out teaching responsibilities (Quirke & Standen, 2024), comprising seminar leading, lab demonstrating, and marking and feedback. While the dual nature of their role (as doctoral candidates that teach) can offer great insight and opportunity for advancing their career prospects, their liminality can create challenges with precarity, perceived competence, and understanding the expectations and responsibilities of GTAs (Zotos, Moon & Shultz, 2020). This can be problematic as they navigate identifying as student and staff simultaneously and grapple with institutional training to enhance preparedness for teaching (Corrales & Komperda, 2022; Brock et al., 2024). This study of GTAs at a Russell Group university seeks to understand how the GTA role shapes career aspirations. Earlier studies indicate that the GTAs' liminality has situated them in third space, assigning a 'blended professional' identity, owing to their movement between academic and administrative roles (Campbell, 2024). Based on this, and the heterogeneity of GTAs, to understand the types of work they fulfil within HE and the influence of this work, a new model of analysis is required (Feng, 2024). Distinct features of the GTA reality and their aspirations are known to be informed by personal background, disciplinary expertise, and their job expectations, as well as their involvement with teaching, research, and service. Hence, by acknowledging this information, institutions may be better placed to develop support and training that not only accommodates difference but uses these subjectivities as a starting point when helping to pave career paths into academia. Feng's (2024) three-dimensional space model is a good fit for the current study as it illustrates GTA positioning regarding the three core functions of higher education – teaching, research, and service. Teaching encompasses student instruction and staff training; research represents disciplinary and institutional research; and service captures the general and professional activities essential to sustaining university operations. These three axis points reveal how GTAs define their work, and indeed how their involvement in these tasks

inform their career trajectories, if at all. This conceptualisation provides a framework for analysing GTAs' expectations, experiences, and career aspirations within the academic field and offers insight into how they navigate their professional identities in higher education. From the data, various implications for higher education are offered. In the first instance, issues with GTA mentorship and supervisionarise as a lack of consistent support is revealed across participant experiences. This indicates that there may be a need for those working with or supporting GTAs to undergo training that addresses the challenges of their unique role. Where training is concerned, the authors consider what additional CPD could be offered to anchor GTAs more firmly in the institution during their contracted employment, and what would also give them a competitive edge thereafter. GTAs are often the GTA's greatest resource, as they share strategies for teaching, and whether challenges together – so, how can they be supported to know one another better as peers, not least as prospective colleagues in the academy?

RESEARCH-BASED TEACHER PROFESSIONAL DEVELOPMENT AND CITIZENSHIP EDUCATION: INSIGHTS FROM A RESEARCH ON DEMOCRATIC LEARNING ENVIRONMENTS

Valeria Damiani (LUMSA University, Italy)

Civic and Citizenship Education | Whole-School Approach | Research-based Teacher Professional Development trainings

This contribution presents the findings of the PRIN project, "The School as a Democratic Learning Environment: Promoting Civic and Citizenship Education (CCE) through a Whole-School Approach (WSA) in the First Cycle of Education". Drawing on the Council of Europe's Reference Framework of Competence for a Democratic Culture (RFCDC, 2018), the project explores the implementation of the Whole-School Approach (WSA), which integrates democratic values across three pillars: teaching and learning, school governance, and community partnerships. The project consists of two phases: the first is dedicated to analyzing the contexts for CCE in a whole-school approach in six schools (two for each research unit) (Damiani, Ciani, Bevilacqua, 2024) through case studies (Yin, 2003); the second involves the implementation of Research-based Teacher Professional Development trainings (Ricerca-Formazione, R-F) (Asquini, 2019) for teachers working in each of the participating schools. These trainings are part of the research work carried out within the CRESPI center on the R-F approach. The study focuses on the second phase of the project: the implementation of Research-based Teacher Professional Development training within two primary and lower secondary schools in Rome. The core of the intervention was the co-design of competence-oriented activities, i.e. interdisciplinary projects designed to let students "experience" citizenship in real-world contexts, such as neighborhood revitalization, digital communication, and schools' initiatives. The trainings adopted a data-driven, collaborative methodology, utilizing the SARF self-assessment tool (Bondioli et al., 2025) to guide the negotiation of objectives between university researchers and teachers, to outline the different phases of R-F with greater clarity and to trace correspondences with the five fundamental points of Ricerca-Formazione. The Research-based Teacher Professional Development trainings highlight several critical aspects related to the promotion and implementation of citizenship education at the school level, ranging from the challenges of introducing methodological innovations and structural barriers to the need to address verticality and continuity across cycles (primary and lower secondary cycles). While, on the one hand, the use of competence-oriented activities effectively shifted the focus from theoretical content to "citizenship in action", increasing student motivation and community engagement, on the other, significant challenges remain regarding collegial cooperation, particularly in lower secondary schools. Although institu-

tional curricula emphasize verticality, the practical implementation of continuity between primary and secondary levels proved difficult to achieve without external intervention. The research underscores that universities serve as essential actors for change, providing the theoretical scaffolding and reflective spaces necessary for teachers to rethink their pedagogical and evaluative practices. In conclusion, while the WSA offers a powerful framework for transforming citizenship education and school culture into a democratic learning environment, and Ricerca-Formazione can act as a valuable approach to promote it, its success depends on overcoming organizational constraints—such as time for shared planning—and ensuring continuity in professional development beyond the lifespan of specific research projects.

BRIDGING SCHOOL AND TERRITORY THROUGH THE ATELIER: TEACHER PROFESSIONAL LEARNING IN CONTEXT

Stefania Bettuzzi (University of Modena and Reggio Emilia, Italy)

City-atelier | Reflective-learning-community | Teacher- development

This contribution explores the educational potential of a civic atelier as a space for research and professional development for teachers. The reflection is based on the comparison of two short Teacher Professional Development Research (TPDR) pathways (Asquini, 2018; Dodman et al., 2025) involving a preschool section composed of children aged 5–6 and a primary school class with pupils aged 8–9. In both experiences, teachers, an atelierista, and a researcher participated, giving rise to a reflective learning community. Throughout the activities, the experiences with the children were documented and reinterpreted through research and design tools, making it possible to revisit the experiences lived in the Atelier a Palazzo1 and to relaunch them in educational and school contexts. In the preschool, the pathway was intertwined with section planning, while in the primary school it was connected to curricular subjects. Over time, the concept of the atelier (Malaguzzi, 2015) has expanded beyond school boundaries, also taking shape as a public civic atelier. This evolution expresses a vision of school rooted in its context and of the city as an educational and cultural place, defining the atelier as a space that generates connections among children, adults, expressive languages, and territory. Within this approach, teachers' professional development is conceived as a continuous, situated, and collegial process grounded in relationships, dialogue, and participation in building a culture of childhood (New, 2007). From this perspective, the teacher assumes the role of researcher who learns alongside children, developing an educational stance understood as inquiry, characterized by greater flexibility, openness, and willingness to embrace uncertainty without predefined answers (Lyon & Donahue, 2009), thus creating democratic, non-hierarchical contexts for the construction of knowledge. Multi-professional collaboration between teachers and atelieristi, and experimentation through atelier culture, foster innovation in educational practices (Palmer & Aprill, 2016), while documentation supports shared reflection, distributed leadership, and participation (Heidi et al., 2009), making children's thinking visible and promoting an educational culture attentive to rights, listening, and plurality of perspectives (İmir & Tuğrul, 2023). In this perspective, TPDR pathways have strengthened within the professional network the capacity to broaden the pedagogical gaze on the child, the role of the teacher, and learning (Therese, 2020). The child has progressively been recognized as an active subject and protagonist, bringing their own rhythms and exploratory strategies, while the teacher has redefined their role in observational and non-directive terms, oriented toward listening and the construction of meaningful contexts. Field experience, supported by documentation and multi-professional dialogue, has nurtured the desire to renew educational practices, valuing environments, materials, and small-group work as conditions for autonomy and collaboration. Learning thus emerges as a shared and situated process, intertwined with professional reflection and the desire to transform teaching strategies. At the same

time, the conclusion of the pathways highlighted the challenges related to transferring innovation and experimentation into participants' own educational contexts. This shows that professional development inspired by the atelier approach cannot be uniformly replicated, but requires grounding in contextual specificities (Guo & Rouse, 2024) and genuine organizational, cultural, and material sustainability. 1https://asbr.it/progetti/atelier-a-palazzo-2

AN EXPLORATORY ANALYSIS OF FACTORS AFFECTING THE RESEARCH-BASED TEACHER PROFESSIONAL DEVELOPMENT MODEL: REFLECTIONS ON A CASE STUDY

Alessandro Oro (University of Bologna, Italy) · **Elisa Guasconi** (University of Bologna, Italy)

Research-based Teacher Professional Development | PRIN project | Analysis of Barriers and Enablers

Recently, a team of researchers affiliated with the Crespi Center conducted a multi-method analysis of the factors influencing the processes and outcomes of the Research-based Teacher Professional Development (RBTPD) Model implemented in schools (Dodman et al., 2025), grounding their investigation in the project's theoretical conceptualization and defining features. Building on these insights, this contribution examines the factors that shaped the development of a specific RBTPD program carried out in a lower secondary school in the Emilia–Romagna region, within Group A of the PRIN2022 project coordinated by the Crespi Center (Agrusti et al., 2024). After outlining the objectives and thematic focus of the PRIN project, connected to the investigation and mitigation of educational poverty in schools, the paper retraces the work undertaken in the school, focused on the area of assessment beliefs and practices, with particular attention to several dimensions included in the SARF self-assessment tool (Damiani et al., 2025). The analysis concentrates on the initial phase focused on identifying and sharing contextual needs and on collaboratively defining the goals of the specific RBTPD project. It provides an overview of the qualitative and quantitative tools used to capture students' and teachers' needs, the evidence collected, and how this information was discussed and interpreted with the participating teachers. The paper then examines how specific contextual characteristics influenced the program development, also referencing the suggestions offered by Ciani and colleagues (2025) on the RBTPD process, together with the reflections and actions that emerged during the work. Specifically, the paper will illustrate how factors related to time availability, teachers perceived sense of control, and leadership posed significant challenges to implementing of the RBTPD study, and how, based on this awareness, the organization of the program was subsequently reconsidered and redesigned to make it sustainable. Finally, the paper will delve into an analysis of the impact of the project both in terms of its content and its methodological approach, drawing on the perspectives of researchers and teachers, and presenting themes that emerged from interviews with participating teachers.

RESEARCH-BASED PROFESSIONAL DEVELOPMENT TO CONTRAST EDUCATIONAL POVERTY AND CULTURAL DISADVANTAGE: AN EXPLORATORY TRIANGULATION OF STATED AND PERCEIVED TEACHING PRACTICES

Ira Vannini (University of Bologna, Italy) · **Francesca Fioretti** (LUMSA University of Rome, Italy) · **Alessandro Oro** (University of Bologna, Italy) · **Marta Cecalupo** (Sapienza University of Rome, Italy)

Educational poverty | Teachers' teaching practices | students' perceptions of practices

Educational poverty and socio-economic, linguistic and cultural disadvantage are multidimensional concepts and refer to numerous areas of deprivation concerning the individual and his/her socio-economic context (Sen, 2000; Giancola & Salmieri, 2023; Save the Children, 2024). Exclusion from educational experiences deepens intergenerational inequalities, hinders social mobility and prevents, especially children, from acquiring knowledge and basic critical thinking skills to plan the future with respect to socio-relational, professional and political-cultural dimensions. Acting as soon as possible is essential to be able to create the conditions for the recovery of socio-cultural disadvantage in school contexts. To address this educational emergency, a 2-year project (Agrusti et al., 2024) funded by Italian Ministry of University and Research aimed to design empirically grounded strategic models of teachers' development intervention in Italian lower secondary schools, with specific reference to urban and suburban areas and their territorial contexts of cities in Northern, Central and Southern Italy, in order to counter socio-cultural disadvantage and school failure through tailored Research-Based Professional Development interventions (RBPD - Ricerca-Formazione; Dodman et al., 2025; Asquini, 2018), that helped removing possible obstacles in implementing active learning strategies for the development of key competences. The research project – characterised by a collective multiple case study – was carried out in two specific phases: - an initial investigation phase to highlight risk and protective factors at the meso and micro levels of the system in school contexts; - a second phase of RBPD intervention within the eight case-study schools. The school contexts considered generally displayed mature and structured professional capital. Training interventions had to enhance already established skills, focusing on advanced professional development rather than basic training. The variability in initial students' results was significant: students with good levels of competence coexisted with others with significant weaknesses. The implicit dropout (students with insufficient skills yet remaining in the system) appeared to be structural and not episodic. The first year's research enabled a detailed analysis of schools' needs: it highlighted main obstacles to equitable and high-quality development of all students' learning. Based on these findings, RBPD interventions were developed with teachers of a class council for each school, tailored specifically to the needs of each specific class-context. In this first phase, it was very interesting to focus on the teaching practices carried out in the various school contexts. These practices were studied both as "practices declared" by teachers and as "practices perceived" by students (Cecalupo, 2021; Guasconi et al., 2025; Moè et al., 2010). The discrepancies between these perspectives, observed before and after the RBPD interventions, generated new research questions. Although direct matching between students' voices with those of their specific teachers, triangulated data analysis opened up further possibilities for discussion with teachers and for planning professional development paths, especially considering students' learning outcomes and identified gaps. Reflecting on the data raises questions about the importance and sustainability of evidence-based teaching practices, geared towards individualisation and recovery. These practices are designed to engage and motivate students, as well as providing them with specific support for developing transversal skills

NARRATIVE CONSTRUCTION OF TEACHER IDENTITY AND UNIVERSITY TUTORING: A CASE STUDY IN THE PRIMARY EDUCATION SCIENCES DEGREE PROGRAM

Donatella Visceglia (Roma Tre University, Italy) · **Ester Caparrós Martín** (Univerity of Malaga (Spain)) · **Nieves Blanco Garcia** (Univerity of Malaga (Spain)) · **Amalia Lavinia Rizzo** (Roma Tre University, Italy)

Teacher Identity | University Internship | Narrative Approach

This paper presents research conducted within the Doctoral Program in "Educación y Comunicación Social" at the University of Malaga, carried out in cotutelle with the Doctoral Program in "Theory and Research in Education and Social Sciences" at Roma Tre University. The study aims to investigate the role of university internships in shaping the professional identity of future teachers, focusing on the relationship between university tutor and student in the Bachelor's Degree Program in Primary Education Sciences. Specifically, drawing from a comparison with the Malaga model, the research sought to understand whether and how the internship experience influences the narrative construction of teacher identity, to identify the elements that characterize an effective educational relationship with the tutor, and to analyze the processes that promote engagement, reflexivity, and professional development. The methodology adopted was a case study with a narrative approach involving three third-year students enrolled in the Primary Education Sciences Degree Program. Data collection instruments included a field journal, observations, and semi-structured and narrative interviews, aimed at exploring in depth the subjectivity of the participants and the reflective processes activated during the internship. Preliminary findings highlight how the relational dialogue with the tutor, understood as a "significant other," fosters conscious growth by supporting the ability to plan, act, and reflect in an integrated manner. The internship experience emerges as a dynamic space of care for oneself and others, within which the ethical and reflective dimension assumes centrality in the construction of professional identity. This leads to a reflection on the need to strengthen tutoring models based on authentic and reflective relationships, valuing narrative as a formative tool, and promoting university pathways capable of integrating theory, practice, and personal development within a perspective of lifelong learning.

EVALUATING PROFESSIONAL IDENTITY OF TEACHERS: EMERGING ISSUES FOR TEACHER EDUCATION

Mariella Tripaldi (Università Cà Foscari Venezia, Italy) · **Giacomo Zavatta** (Università Cà Foscari Venezia, Italy)

Teacher professional identity | dynamic assessment | professional competence

Recent contributions (Purdy et al., 2023; Goodwin et al., 2023; Persico, 2024; Baldacci, 2024) highlight a dichotomous tension between two prevailing paradigms of initial teacher education: managerial professionalism and democratic professionalism. Within the former, teachers' professional identity is framed within a technical–administrative perspective, characterized by top-down orientations in which evaluation assumes a controlling function through standardized procedures and balance-report logics (Giovannini & Santanicchia, 2022). In this framework, teachers' professional practice is constrained by standards and competences primarily defined in technical and procedural terms. By contrast, the second paradigm emphasizes the importance of constructing a professional profile capable of actively and responsibly participating in school decision-making processes and learning from experience. From this perspective, teacher competence involves professional choices that require the orchestration of action schemes applicable to a range of situations of both technical and ethical-social nature. To navigate this impasse, the concept of professional competence and assessment require more detailed investigation. Drawing from Haywood and Lidz (2006) while the chief cognitive developmental task of childhood is acquisition and elaboration of fundamental cognitive processes (structures, functions, operations), by adulthood the primary cognitive task has gradually shifted to one of selection, application, and metacognitive control of these processes, as well as the management of ethical and relational dimensions connected with a specific task (Margiotta 2018). This shift is particularly relevant in the case of professional competence, understood both as the orchestration of action schemes and as an ethical–practical disposition. Consequently, the task of assessment often consists in identifying the presence or absence of structured habits of action and estimating the level of investment required to strengthen these habits in terms of cognitive, relational, and ethical resources. This idea focuses on the concepet of dynamic evaluation (Piacenza, 2023). From this perspective the research question addressed: How can an evaluation model capture teachers' professional practice into observable indicators through observable indicators without reducing it to technical functions or abstract ethical principles? To address this issue, the paper proposes an "identity-based evaluation framework" (Zavatta & Lazzari, 2026). At the theoretical level, this approach moves evaluation beyond its exclusively bureaucratic and certification-oriented function, repositioning it as a process of sense-making and qualification of professional experience (Karimi & Mansouri, 2025). From a research perspective, evaluation is articulated across four dimensions: cognitive–metacognitive, affective–motivational, interactive–relational, and existential (Pellerey, 2006). The contribution therefore focuses on perspectives of evaluation rather than specific tools, paying particular attention to three key dimensions of professional identity: the subjective, the social-collective, and the professional-agentive.

SUPPORTING TEACHERS' PROFESSIONAL REFLECTION THROUGH PEDAGOGICAL-DIDACTIC DOCUMENTATION: EVIDENCE FROM A MIXED-METHODS STUDY

Sofia Bosatelli (University of Milan-Bicocca, Italy)

Teacher Professional Development | Pedagogical-Didactic Documentation | Mixed-Methods Design

This study is situated within the field of Teacher Professional Development (TPD) and investigates the use of pedagogical-didactic documentation as a tool to support teachers' professional reflection and learning. The training approach integrates theory and practice and moves beyond deficit-oriented models of teacher education (Kennedy, 2005). The study examines the outcomes of a professional development programme addressed to primary school teachers and centred on the use of pedagogical documentation and descriptive assessment as tools for reflective practice. The literature review pursued two main objectives: (i) to conceptualise pedagogical documentation from a didactic perspective, acknowledging the complexity of this construct; and (ii) to identify the main factors and dimensions of impact associated with professional development and the effectiveness of training interventions. In this perspective, pedagogical-didactic documentation aims both to make students' learning processes visible and to support teachers' reflection on their instructional practices and pedagogical choices. It can also function as a mediating tool between teachers and researchers within inquiry-oriented professional learning processes. The training programme was designed drawing on research on effective professional development (Kennedy, 2016; Sims, 2021). The study adopts an ecological perspective and follows a mixed-methods sequential explanatory design (QUAN → qual; Creswell & Clark, 2017) to explore the outcomes of a 16-hour professional development programme involving 200 primary school teachers and focused on formative descriptive assessment. The evaluation process was conducted through a participatory "fourth-generation evaluation" approach (Guba & Lincoln, 1989), aimed at capturing teachers' perspectives and experiences. The quantitative phase involved a pre- and post-questionnaire (N = 99), analysed through t-tests and exploratory factor analysis. Results show positive variations across all analysed items and reveal the emergence of a new factor related to student involvement in assessment practices, suggesting increased attention to students' active participation. A shift was also observed within the "didactic" dimension, with a stronger focus on learning-oriented assessment practices rather than administrative aspects. The qualitative phase included six focus groups (N = 72) and three follow-up focus groups (N = 31), analysed through Template Analysis (King & Brooks, 2017). Findings indicate that the training fostered teachers' awareness of the relationship between instructional design and assessment processes, particularly in relation to feedback practices and descriptive judgments. Teachers reported a more reflective use of self-assessment tools and metacognitive questioning strategies. While quantitative data showed limited change in the dimension related to learning objectives, qualitative findings revealed deeper reflection on the coherence between learning goals and classroom tasks. Additional results highlight the role of school leadership and the importance of communication tools capable of supporting dialogue with families through the sharing of pedagogical documentation. Finally, a descriptive analysis of teachers' documentation (N = 15) shows a more advanced use of qualitative assessment tools, greater student involvement in evaluation processes, and improved coherence between objectives and learning activities. Overall, the study suggests that pedagogical-didactic documentation can function as a powerful device for supporting teachers' professional reflection and fostering meaningful professional learning within teacher professional development.

THE LABORATORI DEL SAPERE AS AN EXERCISE IN RESEARCH–TRAINING

Serena Goracci (INDIRE (Istituto Nazionale di Documentazione, Innovazione e Ricerca Educativa), Italy) · **Alessandra Anichini** (INDIRE (Istituto Nazionale di Documentazione, Innovazione e Ricerca Educativa), Italy) · **Loredana Camizzi** (INDIRE (Istituto Nazionale di Documentazione, Innovazione e Ricerca Educativa), Italy) · **Rachele Borgi** (INDIRE (Istituto Nazionale di Documentazione, Innovazione e Ricerca Educativa), Italy) · **Ciro Minichini** (INDIRE (Istituto Nazionale di Documentazione, Innovazione e Ricerca Educativa), Italy)

Reasearch-Training | active learning | documentation

The work carried out by the INDIRE research groups has often positioned itself along a continuum "between academic research on the one hand and practitioners' research on the other" (Asquini, ed., 2018). In particular, the activities developed within the "Laboratori del Sapere" project (Anichini et al., 2022) fully take the form of Research–Training (Asquini, ed., 2018; Dodman et al., 2025). Launched in 2020, the project aims to design laboratory-based learning pathways in several curriculum areas (science, mathematics, Italian, geography, art) following a phenomenological-al-inductive approach (Fiorentini, 2018; Piscitelli et al. 2007). It is addressed to in-service teachers across the national territory and has progressively expanded, involving approximately 600 teachers in the 2025–26 school year. Since its inception, the project has represented a meaningful example of deep collaboration between schools and disciplinary educational research, generating positive outcomes in participating schools, such as strengthened continuity of professional development, increased teacher engagement, collaborative planning within disciplinary departments, and the development of vertical curricula in several school clusters. The definition and shared negotiation of the project's goals, the establishment and sustained facilitation of working groups, and the validation of didactic proposals by a scientific committee constitute the foundation of the research–training pathways. These involve regular online meetings throughout the school year dedicated to study, planning, sharing, analysis, and reflection on teaching practices (Laurillard, 2015). A substantial component of the work is the implementation of the designed pathways in classrooms and the documentation of activities through reflective teaching journals (Goracci et al., 2023). These narratives become the object of collective analysis and reflection, oscillating between theoretical deepening and practice-based inquiry (Altet, 2003; Rossi, 2011; Laneve, 2005). In this way, the project fosters "professional learning as a process of agentic and constructive change, emerging from the ways teachers act and reflect on their professional practice, renewing, enriching, and expanding their competences, spheres of action, and professional identities" (Dodman et al., 2025). This contribution presents the work conducted over the past six years with groups of teachers from different school levels and disciplinary fields (Anichini et al., 2023; Goracci et al., 2023), with a specific focus on the current year (2025–26), during which the pathway has been articulated into progressively deepened modules, moving from training to research. We illustrate the model and tools used across the various modules and present several significant examples of how the proposed pathways have produced transformative impacts within participating schools—enhancing teachers' awareness of educational processes, strengthening collegial organization, and supporting professional development. We also highlight the limits and critical issues encountered in disseminating this research–training model, which profoundly engages with the core professional stance of teachers (Schön, 1993).

Rethinking Teacher Professional Development Impact: Conceptual, Methodological, and Policy Issues

PANEL CONVENORS: Laura Parigi (Indire, Italy); Maurizio Gentile (Crespi – Centro Interuniversitario di Ricerca Educativa sulla Professionalità dell'Insegnante, Italy); Maria Elisabetta Cigognini (Indire, Italy); Elisa Truffelli (Crespi – Centro Interuniversitario di Ricerca Educativa sulla Professionalità dell'Insegnante, Italy); Margherita Di Stasio (Indire, Italy); Alessandra Rosa (Crespi – Centro Interuniversitario di Ricerca Educativa sulla Professionalità dell'Insegnante, Italy)

PANEL KEYWORDS: Teacher professional development, Teacher agency, educational policies

The concept of impact in Teacher Professional Development (TPD) has become a cornerstone of educational policies and evaluation frameworks, yet its meaning remains contested. At the same time, impact is often understood as a measurable change in teachers' knowledge, instructional practices, or student outcomes; such a linear perspective risks oversimplifying complex, multi-layered, and context-dependent professional learning processes. This panel aims to critically interrogate the notion of impact, highlighting its epistemological, methodological, and political implications. First, the panel addresses methodological challenges in defining and assessing impact: simplified causal models, attribution problems, the temporal dynamics of change, heterogeneity across contexts and career stages, and the reductionism embedded in standardised performance indicators. Contributions examining tensions between evidence-based approaches and ecological or qualitative methodologies are particularly welcome. Second, the panel invites critical perspectives questioning dominant narratives of TPD effectiveness and impact: methodological flaws in meta-analyses, structural barriers along the trajectory from PD to practice, the role of teacher agency, the risk of technicizing professional work, and the ethical challenges associated with data use in PD evaluation. Finally, the proposal will give special attention to the influence of educational policies, which shape what counts as impact, which outcomes must be measured, and for what purposes. Policy frameworks often orient TPD toward accountability and standardisation, potentially marginalising relational, reflective, and context-sensitive dimensions of professional growth. We welcome theoretical, empirical, and methodological contributions that problematise the impact of TPD and offer alternative perspectives—more democratic, contextualised, and participatory—on teacher learning and its evaluation."

EMBRACING PEER CULTURE: TRAINING TEACHERS IN THE COLLECTIVE VERSION OF THE FOLKTALE

Claudia Chellini (INDIRE - National Institute for Documentation, Innovation and Educational Research, Italy)

peer culture | teacher's training | collective version

The method of the collective version of the folktale intercepts the expression of peer culture: "a stable set of activities, routines, artifacts, values, and concerns that children produce and share in peer interaction" (Corsaro, 2017, 21). The teacher reads a folktale to pupils aged 9–12 and invites them to re-narrate it through writing and/or drawing, refraining from evaluations, corrections, explanations, or instructions. Children thus access the imaginary through their own paths and tools. The teacher gathers all the work and composes the collective version using exclusively the words and drawings produced by the pupils, preserving their original form. Children's re-narrations express interpretations and fantasies that find in the folktale both a framework and an expressive context (Carli et al., 2021). How can teachers be trained in a method rooted in psychoanalysis (Bettelheim, 2005; von Franz, 1980)? And above all, how can they be supported in welcoming children's peer culture? We propose an online training program, "aimed at shaping and transforming educational and teaching practices, while fostering teachers' reflectivity" (Asquini, 2018, 9), structured in two parts. The first includes eight video lectures and two exercises. Participants produce collective versions reviewed by experts, who discuss incorrect, improvable, and effective solutions during dedicated webinars. In the second part, teachers produce three collective versions with their class. The experts compare them with the children's original work and add personalized annotations, later discussed in a webinar. From the first exercise to the final work, the collective versions evolved from uncertain or poorly constructed texts into coherent and well-structured narratives. Teachers became more able to welcome children's expressions in their immediacy and intensity, including unconventional or apparently incorrect work, recognizing their expressive meaning. The resulting narratives allow children to identify both the original and their own story. Providing a solid theoretical framework together with practical guidance on how to let children's culture emerge—and how to value specific formulations and drawings—has proven essential, as has providing detailed tools to accompany

each phase of the process and a logbook to support observation and reflection (Chellini et al., 2025). Two elements underpin the training's success. First, the working group consists of three experts in the collective version method who share a psychoanalytic approach based on simultaneous listening to the other and oneself. Teachers thus experience in practice the stance they are invited to adopt with their students. Second, the training is grounded in over twenty years of the experts' direct work with children, combined with teacher training. This made it possible to observe teachers closely and identify deeply rooted professional habits, such as explaining everything without leaving "empty" spaces, prescribing what and how to produce work, or correcting errors in texts and drawings without grasping their expressive meaning. Our aim was thus directly focused on showing through practical examples how the method—thanks to its contrainte and drawing on the teacher's psychoanalytic approach—enables children's voices to find their own space as they are, without further adaptations, in a meaning-rich narrative that is collective yet individual.

SCHOOL CULTURES AND TEACHERS' PROFESSIONALIZATION: RESEARCH-BASED REFLECTIONS ON COMPLEX RELATIONS

Simone Seitz (Free University of Bolzano, Italy) · **Giulia Consalvo** (Free University of Bolzano, Italy)

teachers' professional development | school cultures | school development

School development depends on professional actors in schools in order to be effective, especially well professionalized teachers. Conversely, school development processes explicitly require teachers to become more professional, as they demand flexibility and a willingness to embrace complexity and uncertainty (Paseka et al., 2018). Links between school development and the professionalization of teachers are therefore discussed and problematized (Piccioli, 2022; Pomponi, 2020) but have not yet been extensively researched. Starting from here, we assume that school development processes are shaped by institutionalized knowledge, however, individual processes of professional development are embedded in school cultures, shaped by knowledge-based discourses. This means that teachers are not just mirroring implicit knowledge but filling it with specific meanings which means that quality school development processes depend on ongoing interpretation and learning across heterogeneous actors. Building on these premises, the paper reflects findings of an ongoing research project (Researching School Development: pathways to inclusive and quality education 2030/ GOODWILL; 2023–2026). The study focuses on 22 schools in the Autonomous Province of Bolzano, all of which participate in a quality development programme driven by the school administration. The project adopts a mixed-methods design with a qualitative approach: ethnographic observations in primary and secondary schools (Knoblauch & Vollmer, 2022), document analysis (Seitz, Consalvo, & Dell'Anna, 2025), group discussions with teachers and with students, and iterative feedback and dialogue sessions with school leadership and teaching staff, complemented by pre–post questionnaires. In the qualitative part of the study, we draw on Grounded Theory strategies (Glaser & Strauss, 1967; Charmaz, 2006). This theoretical-analytical approach is informed by a praxeological perspective that conceives practices as social configurations shaped by implicit norms and embodied criteria of appropriateness (Reckwitz, 2003). Attention is directed to ordinary mechanisms through which routines produce differentiation—for instance, tacit criteria of "good participation", uneven distributions of speaking opportunities, and feedback practices that stabilize differential expectations—thus sustaining subtle forms of exclusion that remain compatible with an official lexicon of inclusion. In the presentation, we discuss and reflect on the orientations of teachers reconstructed on the basis of group discussions to surface shared orientations, implicit criteria, and collegial negotiations around school development and inclusion. We identify recurring tensions (e.g., belonging vs. otherness, and compensation vs. exclusion) and show how they shape professional action (Consalvo et al., 2025). We focus in particular on how professional acting is (re)configured in everyday practice through

dilemmas, ambivalences, and differential expectations (Clarke & Hollingsworth, 2002), thereby showing that processes of professionalization are produced within—rather than outside—school cultures. In this sense, we suggest understanding "impact" less as linear, measurable change (Desimone, 2009) and more as shifts in interpretive repertoires and in the conditions of possibility for professional action.

QUALITY, EVIDENCE, AND PROFESSIONAL AGENCY: A PEER-REVIEW-INSPIRED APPROACH TO TPD IN SCHOOLS

Laura Evangelista (Istituto Nazionale per l'Analisi delle Politiche Pubbliche (INAPP), Italy) · **Diego Boerchi** (Università Cattolica del Sacro Cuore, Italy) · **Concetta Fonzo** (Istituto Nazionale per l'Analisi delle Politiche Pubbliche (INAPP), Italy)

Teacher professional development (TPD) | teacher agency | evaluative culture

Understanding the impact of Teacher Professional Development (TPD) requires conceptual frameworks able to link individual professional learning with school-wide quality processes. This paper proposes a peer-review-inspired intervention framework for school-based TPD, specifying its core components and an evidence strategy to document impact at both teacher and school levels. Evidence from research on in-service training and formative assessment highlights that professional development is transformative when teachers engage in reflective practices, structured dialogue, and sustained inquiry supported by an evaluative culture (Cigognini & Parigi, 2024). Similarly, studies on the use of professional portfolios indicate that documenting practice over time strengthens teachers' capacity to self-assess, construct professional meaning and connect individual learning with organisational priorities (Di Stasio et al., 2021). At the international level, systematic reviews of Continuing Professional Development (CPD) indicate improvements in pedagogical skills, problem-solving capabilities and teachers' readiness to adapt practices to learners' needs, and quantitative evidence supports the value of coherent and sustainable professional development systems (Ambon et al., 2024; Kurteshi & Rrustemi, 2025). Furthermore, research on teacher agency demonstrates that meaningful change depends on teachers' capacity to interpret, enact and negotiate practices within their organisational contexts (Cong-Lem, 2021). Taken together, these findings emphasise that TPD effectiveness emerges from the interaction between reflective individual learning, collaborative professional cultures and supportive organisational infrastructures. Within this framework, the EQAVET peer review model provides a robust conceptual basis for strengthening TPD impact in schools. Designed for quality assurance in VET, peer review integrates self-evaluation, collegial external feedback and shared evidence-based inquiry, promoting transparency, dialogic reflection and participatory improvement processes (Evangelista & Fonzo, 2023). Guidance for VET providers further recognises that internal quality management should be systemic, collaborative and grounded in regular evidence use, while peer review manuals operationalise these principles through criteria and guiding questions that foster professional dialogue and organisational learning (CEDEFOP, 2015; ISFOL, 2012). Transposing this logic to the school sector does not imply replicating VET procedures, but adapting the underlying principles (evidence use, shared criteria, external perspectives and dialogic feedback) to strengthen the professionalism and agency of teachers. The proposed

framework outlines a cyclical intervention combining a school-embedded self-evaluation focus, reflective documentation (e.g., portfolios and artefacts), a structured peer feedback encounter, and an action plan with follow-up evidence checks aligned with school improvement priorities. By positioning teachers as co-constructors of quality, peer review is expected to enhance professional agency, enabling teachers to interpret challenges, negotiate solutions and contribute collectively to school improvement, in line with international evidence on agency as a driver of sustainable educational change (Cong-Lem, 2021). A peer-review-inspired TPD framework thus reframes impact not as immediate behavioural change but as the development of a school's collective capacity to sustain professional learning. Integrating reflective documentation, collaborative evaluation and structured feedback cycles strengthens coherence between professional development activities, school self-evaluation and improvement plans. In this sense, peer review offers a conceptual and methodological infrastructure for promoting evaluative culture, professional agency and evidence-informed decision-making—key conditions for long-term improvement in teaching and learning.

RESEARCH-TRAINING PROFESSIONAL TRAJECTORIES: SELF-ASSESSMENT AND METAPHORS AS REFLECTIVE AND TRANSFORMATIVE DEVICES

Raffaella Carmen Strongoli (Università degli Studi di Catania, Italy) · **Valeria Catania** (Università degli Studi di Catania, Italy)

Research-Training | Educational Technologies | Teacher professionalism

The paper presents a Research-Training (R-T) experience aimed at the professional development of teachers through a model of situated technological training, centered on the reflective integration of educational technologies, the systematic use of metaphors as heuristic knowledge devices (Strongoli, 2017; Pillera & Strongoli, 2025), and the employment of the Research-Training Self-Assessment Sheet (SARF). The intervention is situated within an epistemological framework that conceptualizes teacher professionalism as a complex and dynamic construct grounded in the interaction among disciplinary, pedagogical, and technological knowledge, consistent with the TPACK framework, which is adopted as an implicit theoretical and methodological reference for the training design (Mishra & Koehler, 2006; De Rossi & Messina, 2016; Mishra, 2019). The training experience was designed in accordance with the research-training paradigm, understood as a methodological device capable of linking the production of scientific knowledge, professional development, and the transformation of practices within authentic contexts (Asquini, 2018; Dodman et al., 2025). The research design follows a mixed-methods approach, integrating quantitative and qualitative instruments within a recursive and longitudinal framework. It includes ex-ante and ex-post surveys, co-design phases, classroom experimentation, and systematic reflection on teaching practice (Vannini, 2021), thereby configuring a cyclical model of professional learning. A central role is assigned to the SARF - used here in an adapted version - tool, employed as a reflective and metacognitive device to support the critical analysis of practices, the evaluation of project feasibility, and the development of awareness regarding teachers' decision-making processes. Beyond its function as an assessment tool, the SARF serves as an epistemic artifact that structures professional reflection, fostering the conversion of experience into shared and transferable pedagogical knowledge. At the same time, the study foregrounds the metaphorical device as a means of investigating latent beliefs, implicit representations, and mental models that inform teaching practices. Metaphors are understood as deep cognitive structures capable of rendering visible teachers' practical epistemologies and documenting their evolution over time. The analysis of metaphorical trajectories reveals a shift from technocentric and instrumental conceptions of technology toward more complex, intentional, and design-oriented representations, in which innovation is framed as a structural

process rather than an episodic occurrence. The findings indicate a significant reconfiguration of professional orientations, characterized by the transition from additive models of innovation to transformative ones, from the technical use of digital tools to pedagogically intentional design, and from the passive adoption of methodologies to forms of informed teacher agency.

RETHINKING THE IMPACT OF TEACHER PROFESSIONAL DEVELOPMENT WITH A FOCUS ON THE RICERCA-FORMAZIONE PERSPECTIVE: INSIGHTS FROM A SCOPING REVIEW

Sofia Bosatelli (Università di Milano Bicocca) · **Laura Landi** (Università di Modena e Reggio Emilia, Italy) · **Alessandra Boscolo** (LUMSA)

Impact evaluation · scoping review · research-based TPD

Impact evaluation of teacher professional development (TPD) has become a central concern in educational research and policy debates. Several models have been proposed to conceptualise and assess the effects of professional learning, drawing on traditions of programme evaluation (Kirkpatrick, 1994; 2006) and their subsequent adaptations to the field of teacher education (Guskey, 2000). Within this framework, the impact of TPD has often been examined in terms of changes in teachers' knowledge and instructional practices and in relation to student learning outcomes (Hattie, 2009; Yoon et al., 2007). However, the literature increasingly highlights that impact is an inherently multifaceted and multidimensional concept, involving interconnected levels of educational processes, including teachers' professional learning, transformations in classroom practices, collaborative dynamics within schools, and students' learning (Timperley et al., 2007; Kennedy, 2016). Despite this theoretical recognition of complexity, many empirical studies continue to operationalise impact through linear causal models and limited indicators, often relying on self-reported measures and post-intervention surveys. Drawing on a scoping review of 159 international studies on the impact of in-service TPD - beyond student achievement-only metric - this contribution critically examines how impact is conceptualised, investigated, and measured in the research literature (Landi et al., 2025; Bosatelli et al., in press; Boscolo et al., in press). The review maps the main dimensions of impact considered in the studies, the methodological approaches adopted, and the actors involved. The analysis reveals a strong concentration on teacher-centred indicators—such as knowledge, beliefs, and perceptions—while other dimensions, including observable changes in teaching practices, student perspectives, organisational transformations, and long-term professional trajectories, remain comparatively underexplored. The research further examines the reviewed studies through the lens of Ricerca-Formazione (R-F), a heuristic framework for inquiry-based teacher professional learning. The five R-F core elements are used as an analytical lens to explore the extent to which the PD initiatives described in the literature align with inquiry-based and collaborative learning processes. The analysis shows that most PD initiatives display a limited alignment. In particular, while contextual analysis and documentation-supported reflection appear relatively frequently, other elements—such as negotiated goals and structured collaboration between teachers and researchers—are rarely described. These findings highlight not only the partial integration of inquiry-oriented approaches within PD initiatives, but also the limited and often inconsistent reporting of key programme characteristics, which makes it difficult to connect impact evaluation with the specific features of the PD designs. The contribution suggests extending this line of inquiry beyond English-language literature in order to identify adjacent traditions and non-Anglophone approaches that may share conceptual affinities with the R-F perspective while relying on different theoretical vocabularies. Further, this study highlights the difficulty of capturing the complexity of TPD within impact research, which often focuses on effectiveness as measurable output while paying limited attention to the structure and dynamics of the

formative process itself. We argue that investigating the relationship between the design of PD and its impact requires moving beyond a narrow view of effectiveness toward a more contextualised, relational, and democratic understanding of professional learning and its effects.
