

third international conference
of the journal *Scuola Democratica*

education and/or social justice

3-6 June 2024, Cagliari (Italy)

Education is a battleground of power, identity, and inequality. This volume unravels the tensions between exclusion and inclusion, privilege and marginalization, tracing how policies, epistemologies, and ideologies shape who belongs—and who is left behind.

PROCEEDINGS

01

Inequality, Inclusion, and Governance

BRINGING EDUCATION BACK TO SCHOOL: AN ACTION RESEARCH PROJECT TO STRENGTHEN TEACHER PROFESSIONALISM AND AVOID THE MEDICALISATION OF SCHOOLING

Valerio Ferrero^a

Anna Granata^b

^aUniversity of Turin; ^bUniversity of Milan-Bicocca

Bringing education back to school is both an epistemological and a professional issue. Following a theoretical framework, this paper presents the results of an action research involving primary school teachers, parents and a neuropsychiatrist.

school; education; students' well-being; teacher professionalism; Italy

INTRODUCTION

The pivotal role of teachers in providing equitable and quality education for all with significant impact on society has long been internationally acknowledged (Mincu, 2015; Sahlberg & Boce, 2010). Teacher professionalism is essential to the strength of school systems, concerning educational policies, institutional practices and daily school life (Tatto, 2021). Therefore, investing in teachers through initial and in-service education, career development and enhanced social and economic recognition is a key issue. This paper explores the challenges of the teaching profession, with a focus on the Italian context.

The Italian school system is facing several structural challenges. Low public spending on education (OECD, 2024) leads to various territorial differences: all-day education is widespread in northern Italy, while in the south it often remains below 10%; many school buildings need maintenance. In addition, the increasing adherence to neoliberal logic exacerbates inequalities between schools and students (Baldacci, 2022). Thus, teachers are losing their social

relevance due to a lack of investment and a public discourse that denounces the inefficiency of education as a great equaliser (Gremigni, 2012).

Bringing education back to school is a matter of strengthening the school system and reaffirming the social role of teachers (Ferrero & Granata, 2024). This paper explores the importance of prioritizing teacher professionalism in planning the inclusion of students with special educational needs, in order to counteract trends of medicalization and the delegation.

1. THEORETICAL FRAMEWORK

Bringing education back to school involves both the relationship between disciplines and the dialogue between professionals. It is essential to refocus on the educational perspective, both epistemologically and professionally.

1.1. In Dialogue, but on an equal footing!

The complexity of educational phenomena makes a single-disciplinary approach inadequate (Morin, 1999). Fragmented knowledge fails to capture the multiple factors influencing students' educational paths, the school culture and organization. Furthermore, interdisciplinary dialogue is authentic only if there are no hierarchical relationships between disciplines (Bertolini, 2005; Granata, 2018).

Education often takes a subordinate role (Moscato, 2012): when it moves into other fields, it can lose its specific insight on the student's growth path. As far as school and special educational needs are concerned, the attention is no longer on the student and their approach to learning, but on what is perceived as a deviation from the idea of norms, on codes and diagnoses (Gambacorti-Passerini, 2016; Gaspari, 2016). As a result, the focus shifts from students' strengths to their difficulties, diminishing the view of the person in favor of aspects like certification, deficits and distance from the norm.

In the school context, education is the key disciplinary lens to understand the various dynamics that arise. Its dual nature, both reflective and practical (Chiosso, 2018), should be more strongly emphasized both at the epistemic level and in dialogue with other disciplines. The educational perspective helps to maintain the connection between instruction and education (Biesta, 2012) ensuring that the school experience is aimed at the holistic growth of the person.

1.2. Interprofessional Collaboration for Special Educational Needs

The ancillarity of education as a disciplinary lens is reflected in the position of the teacher professionalism in the interprofessional dialogue on the inclusion of students with special educational needs. Therefore, it is necessary to affirm the specific professional competence of teachers (Arsena, 2024) in developing pedagogical responses to students' needs. In fact, neuropsychiatrists, psychologists, speech therapists and social workers are considered more entitled to provide operational and planning guidelines for schooling, relegating teachers to a purely executive role, which is detrimental to their professional self and, above all, dangerous for the quality of students' experience.

Medical professionals have a fundamental role in the diagnostic process: the information provided by teachers is certainly useful, but must be supplemented by particular procedures and tools. Likewise, they must respect the competences of teachers, who can respond to the specific needs of each student with pedagogical means (De Anna, 2022). Teachers themselves must defend and strengthen their role as designers of students' educational paths, without ceding this responsibility to others (Martinelli, 2015): otherwise, the danger is to delegate pedagogical planning to professionals who are careful to provide technical and "special" answers and who do not prioritise the collaborative dimension of learning processes and school life.

There is a need to rediscover teaching (Biesta, 2017) in order to design inclusive processes from an educational perspective. If the interprofessional dialogue only marginally considers this point of view, the need for change for the whole context is ignored (Ainscow, 2020). In fact, student empowerment does not take place through their adaptation to the educational offer with individualised teaching methods, but through personalization processes in which the classroom is seen as a learning community to which everyone makes their own contribution (Ianes & Demo, 2023). Ultimately, bringing education back to school means moving away from the logic of the standard and the average student and not delegating pedagogical and didactic decisions to other professionals (Bellantoni & Lombardi, 2020).

2. THE RESEARCH DESIGN

Our research aims to understand how the medicalization of schooling can be avoided by reaffirming teaching professionalism. We want to answer the following research questions:

- what are the consequences of the ancillary educational perspective on schooling?
- how can the inclusion of special educational needs be addressed by purely pedagogical means without medicalization and delegation?
- how can teacher professionalism be brought back into focus?

2.1. Methods and Tools

We used a qualitative approach (Luttrell, 2010). An action research was conducted: the primary school teachers were the main actors; the path with them was triangulated with the voice of parents and a neuropsychiatrist.

Five low structured focus groups (Morgan, 2013) were conducted with the teachers in order to explore their ideas on the research topic and design pedagogical strategies related to special needs. Narrative interviews (Gubrium et al., 2012) were conducted with the parents and the neuropsychiatrist about their perspectives on the theme.

2.2. Participants

9 teachers of three first classes of a primary school in Lombardy (Northern Italy) took part to the research. Furthermore, 2 parents and 1 neuropsychiatrist were involved.

2.3. Data Analysis

The data collected were thematically analysed (Braun & Clarke, 2021). After having familiarized with the participants' dialogic interactions, we code them by drawing out the relevant discursive segments in relation to the research questions; then, themes are constructed and defined to summarize the different codes into a central and organizing concept that is declined in different nuances.

3. RESULTS

Some significant excerpts from the interviews with the parents and the neuropsychiatrist are offered. Instead, data collected from the path with teachers are presented from these thematic strands:

- importance of being a diverse but close-knit team;
- teacher habitus;
- classroom as a space for dialogue;
- beyond the traditional schooling;
- enhancing hidden capabilities.

The names used are pseudonyms.

3.1. The Parents

The first parent interviewed explains exactly how school culture and organisation can negatively affect the students' well-being. Specifically, a school transfer produced problems that have never occurred before and the uncritical categorization of the pupil into the special educational needs category by the teachers.

Vicky is a sociable and lively child. She faced major changes after we moved this year.

In her previous school, teachers appreciated her intelligence and empathy for classmates with disabilities. However, new teachers see her behavior as opposite, noting her refusal to write in cursive and difficulty completing assignments.

They recommended screening for dyslexia, dyscalculia and ADHD; they interpreted her sensitivity to classmates with disabilities as "difficulty in relating to *normal* classmates".

As parents, we feel confused and ignored by the teachers.

Lucia, Vicky's mother

The second parent interviewed also points out how schools can extinguish students' motivation to learn and invoke the category of special educational needs if results are unsatisfactory. Furthermore, in this case, bilingualism is considered not as a resource but as an obstacle to learning.

Pablo is a Spanish-Italian child. He has always preferred solitary play and has a strong interest in science and nature.

Despite his intelligence, he struggles in primary school due to traditional teaching methods and limited outdoor activities. While thriving in his interests, he dislikes group work.

Teachers suspected autism or ADHD and requested a screening, which came back negative. They also suggested exempting Pablo from activities he resists.

Julia, Pablo's mother

3.2. The Neuropsychiatrist

The neuropsychiatrist interviewed points out that teachers too often seek external advice without questioning how they can respond to students' difficulties with their professional skills. This approach leads to an overburdening of healthcare facilities and a medicalization of learning paths.

Teachers must carefully consider whether to refer students to neuropsychiatry.

Many foreign children are screened for potential learning disorders based on teachers' reports. While such diagnoses may sometimes be valid, it's also reasonable to consider that these difficulties might stem from the natural process of learning written Italian, which requires time.

Marco, neuropsychiatrist

3.3. The Teachers

Firstly, teachers emphasise the need to be a cohesive team. The diversity of skills and visions is seen as a value.

We are a team with different ages and skills. We get along well: everyone plays their part and the children benefit too.

Carla

A good climate is not created from one day to the next, you must work at it.... Both among adults and with children.

Marta

Secondly, the focus is on the teacher habitus, especially to deal with those cases where students approach learning with anxiety and fear.

We must communicate that even the teacher can make mistakes.

Mattia

Many children have performance anxiety: you must work on this!

Barbara

Anxiety belongs to the teachers too: certifications also depend on taking away the anxiety of getting all pupils to achieve the same goals.

Carla

Thirdly, the ideas about the classroom are crucial: it is not an aseptic space, but a pedagogical environment that must be designed with regard to relational climate.

We take 10 minutes every morning to tell each other how we feel. It is important to create a peaceful atmosphere.

Anna

We create a class museum with our school memories.

Barbara

We have five minutes (which often become much more than five) in which we tell each other what is on our minds...

Maria Grazia

It becomes clear that the school time, space and organisation must be renewed. When students have difficulties, the solution cannot be to immediately refer to the category of special educational needs: this would entail the risk of labelling and medicalization.

The classes divided by age are very rigid: sometimes more flexibility is needed... Mixing the ages would help many children to learn better.

Anna

We should create a toolbox that everyone can use if they need it and independently.

Giulia

Not all students learn in the same way. Some need more attention and different teaching methods. I need to incorporate different approaches to teaching.

Carla

Finally, teachers emphasise the need to focus not only on knowledge and abilities related to school subjects. Every student has skills and talents that must be fully recognised.

The notebook does not tell all the students' abilities. We strive to find them, but it is difficult to communicate this approach to families.

Anna

We carry out activities that bring out other skills than the typical school ones... Tending a plant, contributing to the local area... The best skills emerge when students work together!

Giulia

4. DISCUSSION

The results of our study show that the dynamics of delegation and medicalization as well as the devaluation of teacher professionalism are still present in the Italian school system. Regarding the second area, teachers themselves prefer to turn to other professions to respond to challenges that are primarily pedagogical in nature.

In addition to addressing the structural deficits of the school system at a

political level, we must move away from the belief that certain learning styles or intelligences are more valuable than others. Every student possesses unique skills and talents that deserve to be nurtured, even if they are wrongly deemed irrelevant for school. Cultivating students' well-being requires a pedagogy that places them at the centre, without a false understanding of norm or standard.

Thus, it is important not to prematurely label momentary school difficulties as permanent special educational needs. Conversely, we must question the traditional understanding of the educational experience. School times and spaces must be adapted to the needs of students by finding new organisational solutions, in order to create the conditions for better learning for all.

CONCLUSION

Our paper focused on the Italian school system, but our reflections may also be useful for other contexts with similar characteristics and problems. In fact, improving teacher professionalism is a central theme in the international debate.

Bringing education back to school is an ethical, epistemic and professional issue. Adopting this perspective means putting learners at the centre of teaching, abandoning an adult-oriented logic and understanding personalization as a classroom-based approach, without separate and multi-level paths. By imagining new ways of schooling, students' hidden talents and skills can be valued.
